**Selling Sickness** Ray Moynihan, Alan Cassels, 2005-06-01 read this book and rage.' Clive Hamilton This remarkable investigation of the Sickness Industry is by two accomplished writers with an incredible story to tell.' Robyn Williams Three decades ago, the head of one of the world's leading drug companies made some remarkably candid comments. Wishing his company was more like the chewing gum maker Wrigley's, the chief executive of Merck said it had long been his dream to make drugs for healthy people, and sell to everyone'. That dream now drives the marketing machinery of one of the most profitable industries on the planet. Using their dominating influence in medical science, drug companies are marketing fear in order to re-define human illness. In alliance with company-friendly doctors and sponsored patient groups, the all-powerful pharmaceutical industry is helping to widen the very definitions of disease, in order to expand markets for its drugs. With compelling clarity, Selling Sickness reveals how the ups and downs of daily life are becoming mental disorders, and common complaints are being transformed into frightening conditions. Shyness is Social Anxiety Disorder, PMS is a psychiatric illness called PMDD, and active children now have ADHD. As more and more ordinary people are turned into patients, drug companies move ever closer to that dream of selling to everyone.

**Generic** Jeremy A. Greene, 2016-09-01 Greene's history sheds light on the controversies shadowing the success of generics: problems with the generalizability of medical knowledge, the fragile role of science in public policy, and the increasing role of industry, marketing, and consumer logics in late-twentieth-century and early twenty-first century health care.

**Selling Pharmaceuticals-A Love Affair** Mumtaz Akhtar, 2015-01-31 This book is called A Love Affair basically for two reasons. The first is that I love medical representatives and wish to empower them to lead fruitful satisfying lives. I have myself worked for seventeen years as a medical representative. This book is the labour of Love and tribute for the medical representatives with whom I have been associated for thirty one years of my life. While rewriting the book for the second time I realised and was amazed by the similarity in the way that a sales persons job must be perused and in the way a young man woos his lady love to persuade her to marry him. In fact the similarities were so wide that the book demanded to be written as A Love Affair. This rewriting of the book made it suitable for all Sales People in addition to the medical representatives, hence the title. The second reason for calling it A Love Affair is the way that the book is written. All the aspects discussed here may be closely related to A Love Affair. Similarities occur that make the understanding of the sales process at once easy and interesting.

**Miracle Medicines** Robert L. Shook, 2007-03-01 It's the business of saving lives. Miracle Medicines goes behind the scenes of the pharmaceutical industry and into the high-security laboratories to tell the stories of the men and women---chemists, physiologists, medical and clinical researchers,

engineers---who have chosen to toil for years in the lab in order to transform scientific theories into new lifesaving medicines. You'll witness the day-to-day labors, victories and defeats of the dedicated professionals who are waging a war against the diseases that still plague mankind. From the confines of their laboratories, these pharmaceutical adventurers explore unknown territories in health and science. *Miracle Medicines* reveals what really happens during the long and uncertain journey that each new drug and its creators must endure from theory, to research, to testing and, finally, FDA approval and delivery to the public. It's a very human story within the context of fascinating scientific innovation. Through first hand interviews you'll also meet the patients who benefit from these manmade miracles and learn how, within their bloodstreams, an ongoing battle is raging. The drugs profiled are: Advair: GlaxoSmithKline's revolutionary asthma medication, the first packaged as both a control and emergency drug. Gleevec: The Novartis' chronic myeloid leukemia treatment born from decades of medical research in a field of study that was once considered hopeless. Humalog: Eli Lilly's reinvention of insulin to control diabetes has been described as being better than nature. Lipitor: Pfizer's miracle antidote for high cholesterol that was nearly lost to the pharmaceutical vaults and has since become the world's top-selling medicine. Norvir: Abbott's contribution to the fight against HIV that nearly erases all traces of the disease from the bloodstream and prolongs the life of patients. Remicade: Created for the treatment of Crohn's disease, rheumatoid arthritis and other Immune Mediated Inflammatory Diseases, Johnson & Johnson's revolutionary biomedicine was developed from technology that once was only found in science fiction. Seroquel: AstraZeneca's treatment for both schizophrenia and bipolar mania that has given millions of psychiatrics a new lease on life. This compelling and truth-revealing book will forever change the way you view the medicines in your medicine cabinet, and the people who create them.

*Selling Sickness* Ray Moynihan, Alan Cassels, 2006-06-23 Thirty years ago, Henry Gadsden, the head of Merck, one of the world's largest drug companies, told *Fortune* magazine that he wanted Merck to be more like chewing gum maker Wrigley's. It had long been his dream to make drugs for healthy people so that Merck could sell to everyone. Gadsden's dream now drives the marketing machinery of the most profitable industry on earth. Drug companies are systematically working to widen the very boundaries that define illness, and the markets for medication grow ever larger. Mild problems are redefined as serious illness and common complaints are labeled as medical conditions requiring drug treatments. Runny noses are now allergic rhinitis, PMS has become a psychiatric disorder, and hyperactive children have ADD. When it comes to conditions like high cholesterol or low bone density, being at risk is sold as a disease. *Selling Sickness* reveals how widening the boundaries of illness and lowering the threshold for treatments is creating millions of new patients and billions in new profits, in turn threatening to bankrupt health-care systems all over the world. As more and more of ordinary life becomes medicalized, the industry moves ever closer to Gadsden's dream: selling to everyone.

**The Sawbones Book: The Hilarious, Horrifying Road to Modern Medicine** Sydnee McElroy, Justin McElroy, 2020-12-29 Expanded Edition includes pandemics, plagues, and global panics.

What are the roles, actions and positions of non-formal biomedical prescribers and providers in developing countries? A systematic literature review Nur Khan, 2016-08-09 Master's Thesis from the year 2015 in the subject Medicine - Public Health, grade: 6.68/7, The Australian National University (College of Arts and Social Science & ANU College of Medicine, Biology and Environment), course: THES8103 Master's (Advanced) Thesis, language: English, abstract: This paper aims to present a systematic review of literature to identify and synthesize the existing knowledge on role, activities and position of non-formal biomedical prescribers and providers (NFBPs) in developing countries. It argues this cadre is different from two established groups: formal biomedical practitioners and informal health care providers, who usually function outside the "formal" and "informal" domain in terms of their experience, skills, training and negotiating capacity with the biomedical world of practice. With an operational definition of practitioners who function as "Non-formal biomedical prescribers and provider" the databases searched include: PubMed, JSTOR, SocioFile, Cochrane Library, Anthropology Plus, CINAHL and PsycINFO. Grey literature were searched as well. Searches were limited to published papers since 1 January 2000, in English. A structured data appraisal sheet was used following PRISMA guidelines and applied to the papers to assess their quality. Of 90 papers initially read, 25 were selected for inclusion in this review. The most frequently-reported activity was drug selling or prescribing without a prescription (15/25 studies). Dispensing on the basis of "floating" prescriptions (i.e. prescriptions that are kept by the patient and have become recurring tickets to receive medication) was also described. Five studies described NFBPs who provided health care (e.g. diarrheal illnesses, gynecological care, and malaria diagnosis and treatment). The NFBP is often a pragmatic, emergent response to meet everyday primary and emergency health needs, and are imbued with community trust and reliance to provide. However they operate at the margin, and occupy a liminal space, being both medical but not-medical. Their positioning within the biomedical global medicine market is indistinct, grappling with direct and indirect influence by the pharmaceutical industry, and outside the formal regulatory mechanisms. Sufficiently flexible and thoughtful use of socio-cultural frameworks can lead to more theoretically informed analysis of the research in systematic reviews, and clear recognition of NFBPs as an emerging distinct group needed to develop policy and effective interventions to capitalize on the existing roles and practices of non-formal biomedical prescribers and providers.

*Selling Sickness* Ray Moynihan, Alan Cassels, 2005 Reveals how widening the boundaries of illness and lowering the threshold for treatments is creating millions of new patients and billions in new profits, in turn threatening to bankrupt national healthcare systems all over the world.

*The Laws of Medicine* Siddhartha Mukherjee, 2015-10-13 Essential, required reading for doctors and patients alike: A Pulitzer Prize-winning author and one of the world's premiere cancer researchers reveals an urgent philosophy on the little-known principles that govern medicine—and how understanding these principles can empower us all. Over a decade ago, when Siddhartha Mukherjee was a young, exhausted, and isolated medical resident, he discovered a book that would forever change the way he understood the medical profession. The book, *The Youngest Science*, forced Dr. Mukherjee to ask himself an urgent, fundamental question: Is medicine a "science"? Sciences must have laws—statements of truth based on repeated experiments that describe some universal attribute of nature. But does medicine have laws like other sciences? Dr. Mukherjee has spent his career

pondering this question—a question that would ultimately produce some of most serious thinking he would do around the tenets of his discipline—culminating in *The Laws of Medicine*. In this important treatise, he investigates the most perplexing and illuminating cases of his career that ultimately led him to identify the three key principles that govern medicine. Brimming with fascinating historical details and modern medical wonders, this important book is a fascinating glimpse into the struggles and Eureka! moments that people outside of the medical profession rarely see. Written with Dr. Mukherjee's signature eloquence and passionate prose, *The Laws of Medicine* is a critical read, not just for those in the medical profession, but for everyone who is moved to better understand how their health and well-being is being treated. Ultimately, this book lays the groundwork for a new way of understanding medicine, now and into the future.

*Familiar Medicine* David Craig, 2002-06-30 One of the first medical ethnographies to be written on contemporary Vietnam, *Familiar Medicine* examines the practical ways in which people of the Red River Delta make sense of their bodies, illness, and medicine. Traditional knowledge and practices have persisted but are now expressed through and alongside global medical knowledge and commodities. Western medicine has been eagerly adopted and incorporated into everyday life in Vietnam, but not entirely on its own terms. *Familiar Medicine* takes a conjectural, interdisciplinary approach to its subject, weaving together history, ethnography, cultural geography, and survey materials to provide a rich and readable account of local practices in the context of an increasingly globalized world and growing microbial resistance to antibiotics. Theoretically, it draws on current critical and cultural theory (in particular applying Pierre Bourdieu's work on habitus and practical logics) in innovative but approachable ways. David Craig addresses a range of contemporary fascinations in medical anthropology and the sociology of health and illness: from the trafficking of medical commodities and ideas under globalization to the hybridization of local cultural formations, knowledge, and practices. His book will be required reading for international workers in health and development in Vietnam and a rich resource for courses in cultural geography, anthropology, medical sociology, regional studies, and public and international health.

However, Li Xiaobai found that in this new world, his innate ancestors had a place to play, and he was invincible! ☆About the Author☆ Qu Mao De Lao Shu, a new online novelist, his writing is smooth and full of fun, and his work *Supreme Taoism Master* has been widely welcomed for its ups and downs storyline and peculiar imagination.

**MDS-3** Martha A. Embrey, Management Sciences for Health (Firm), 2013 Managing Drug Supply (MDS) is the leading reference on how to manage essential medicines in developing countries. MDS was originally published in 1982; it was revised in 1997 with over 10,000 copies distributed in over 60 countries worldwide. The third edition, *MDS-3: Managing Access to Medicines and Health Technologies* reflects the dramatic changes in politics and public health priorities, advances in science and medicine, greater focus on health care systems, increased donor funding, and the advent of information technology that have profoundly affected access to essential medicines over the past 14 years. Nearly 100 experts from a wide range of disciplines and virtually every corner of the world have contributed to this third edition. In addition to many new country studies, references, and extensive revisions, *MDS-3* offers new chapters on areas such as pharmaceutical benefits in insurance programs, pricing, intellectual property, drug seller initiatives, and traditional and complementary medicine. The revisions and new chapters echo the wide variety of issues that are important to

health practitioners and policy makers today. MDS-3 will be a valuable tool in the effort to ensure universal access to quality medicines and health technologies and their appropriate use.

The Context of Medicines in Developing Countries Sjaak van der Geest, Susan Reynolds Whyte, 2012-12-06 Western pharmaceuticals are flooding the Third World. Injections, capsules and tablets are available in city markets and village shops, from 'traditional' practitioners and street vendors, as well as from more orthodox sources like hospitals. Although many are aware of this 'pharmaceutical invasion', little has been written about how local people perceive and use these products. This book is a first attempt to remedy that situation. It presents studies of the ways Western medicines are circulated and understood in the cities and rural areas of Africa, Asia and Latin America. We feel that such a collection is long overdue for two reasons. The first is a practical one: people dealing with health problems in developing countries need information about local situations and they need examples of methods they can use to examine the particular contexts in which they are working. We hope that this book will be useful for pharmacists, doctors, nurses, health planners, policy makers and concerned citizens, who are interested in the realities of drug use. Why do people want various kinds of medicine? How do they evaluate and choose them and how do they obtain them? The second reason for these studies of medicines is to fill a need in medical anthropology as a field of study. Here we address our colleagues in anthropology, medical sociology and related disciplines.
