The Meep Sheep Chris Ringler,2010-02-28 Welcome to the Kingdom of Man, where the Mistresses of Magic have ruled their Kingdom with sunshine and peace for centuries. As the dawning of a new age comes and a new Mistress is about to take the throne as Queen though, darkness is finally coming to the land. In a world full of amazing creatures and wondrous sights it will fall to people who have yet to meet to stand together against a hidden enemy who is working to bring darkness back to the land forever and who seeks to destroy all that is good in the Kingdom. But it is always during the darkest of times when the light can become the brightest, and in order to save their world, strangers will become friends, friends will become heroes, and heroes will become legends, united by their common hope and the simple magic of the Meep Sheep.

Meep Andy Geppert,2015-05-31 When Meep the little peacock gives away all his beautiful feathers to help his friends feel better, he learns the real meaning of friendship, generosity and inner beauty.

Applications of Electroactive Polymers Bruno Scrosati,1993-05-31 Electroactive polymers have been the object of increasing academic and industrial interest and in the past ten to fifteen years substantial progress has been achieved in the development and the characterization of this important new class of conducting materials. These materials are usually classified in two large groups, according to the mode of their electric transport. One group includes polymers having transport almost exclusively of the ionic type and they are often called 'polymer electrolytes' or, in a broader way, 'polymer ionics'. The other group includes polymeric materials where the transport mechanism is mainly electronic in nature and which are commonly termed 'conducting polymers'. Ionically conducting polymers or polymer ionics may be typically described as polar macromolecular solids in which one or more of a wide range of salts has been dissolved. The most classic example is the combination of poly(ethylene oxide), PEO, and lithium salts, LiX. These PEO-LiX polymer ionics were first described and proposed for applications just over ten years ago. The practical relevance of these new materials was immediately recognized and in the course of a few years the field expanded tremendously with the involvement of many academic and industrial laboratories. Following this diversified research activity, the ionic transport mechanism in polymer ionics was soon established and this has led to the development of new host polymers of various types, new salts and advanced polymer architectures which have enabled room temperature conductivity to be raised by several orders of magnitude.

Conducting Polymers Faris Yilmaz,2016-10-05 An authentic revolution took place in the area of solid-state chemistry and physics just after World War II. The century of solid state started from the modest beginnings of the transistor at Bell Laboratory. Since then, the area of science and technology has been directed primarily toward the study of alloys, ceramics, and inorganic semiconductors. The size of electronic devices became smaller and smaller, while the dimensionality of materials was also reduced just after the invention of the integrated circuit. It is at this point that the advent of the discovery of quasi one-dimensional conductors has opened up a whole new area of "nonclassical" solid-state chemistry and physics. In the modern world, plastic and electrical devices are always tightly integrated together. However, it was in 1977 that an electrically conductive, quasi one-dimensional organic polymer, polyacetylene, was discovered. During the past 30 years, a variety of different conducting polymers have been developed. Excitement about these polymeric materials is evidenced by the fact that the field of conducting polymers has attracted scientists from such diverse areas of interest as synthetic chemistry, electrochemistry, solid-state physics, materials science, polymer science, electronics, and electrical engineering.

Applicative Aspects of Poly(organophosphazenes) Roger De Jaeger,2004 Gleria (National Research Council, Italy) and De Jaeger (chemistry, University of Sciences and Technologies, France) present material dedicated to the use of poly(organophosphazenes) in biology, photochemistry, and high energy radiation chemistry. Their use as hybrid materials, flame and fire retardants, blend components, ionic conductors, membranes, and catalysts is also examined. Research on cyclomatrix polyphosphazene for membrane applications, sulfonated polyphosphazene membranes for direct methanol fuel cells, and synthesis and applications of phosphazene compounds is described. Dining with Milton and Bunyan and other comic verse Peter Goulding,2018-02-08 Peter Goulding's fourth, or maybe fifth, (who's counting?) book of comic verse again delves the murky depths of the poet's imagination. There are still plenty of poems about murdering his wife and disposing of her body but there are darker poems too - the proliferation of tomatoes on Jupiter, the birth of Princess Charlotte and his critiques of the counties of Tipperary and Offaly, to name but four. His mind, which, to be frank, would be put to much better use, learning a trade or simply vegetating, is again employed solving many of the world's problems in rhyming couplets, villanelles and other fiendish weapons of mass destruction. Comes with a cultural health warning.

Super Boba Café (Book 1) Nidhi Chanani,2023-10-24 First in a series, Nidhi Chanani's Super Boba Café is a sweet and magical middle-grade, full-color graphic novel about a secret teashop, an earthquake-causing monster, and an unforgettable summer. In the fog-laden hills of San Francisco sits a sleepy independent boba café. Run by Jing Li and guarded by her kitty, Bao, it comfortably fades into the background. But inside the boba café, there's a secret. Jing is the keeper of the monster of San Francisco. Each day she prepares one giant boba for nine hours to feed it. When Jing's granddaughter, Aria, comes to stay with her for the summer, she makes

it her mission to turn the café around. Aria is quickly aided by Bao, who gives birth to eight perfect kittens. Aria spreads the news of the boba cat café on social media and overnight it is overrun with excited customers. Each day Nainai Li (Grandma Li) finds reasons to close the café, but the demand only increases. When she opens, the hill monster is left hungry and small earthquakes begin to plague the city. When Aria secretly follows her nainai to the hill monster’s cave, she isn’t sure what awaits. Will Aria be able to reason with the monster, or will she become its new favorite meal? Or might she disturb its underground existence and cause the Big One?

Photonic Structures Inspired by Nature Mathias Kolle,2011-01-18 Unlike most natural colours that are based on pigment absorption, the striking iridescent and intense colouration of many butterflies, birds or beetles stems from the interaction of light with periodic sub-micrometer surface or volume patterns, so called “photonic structures”. These “structural colours” are increasingly well understood, but they are difficult to create artificially and exploit technologically. In this thesis the field of natural structural colours and biomimetic photonic structures is covered in a wide scope, ranging from plant photonics to theoretical optics. It demonstrates diffractive elements on the petal surfaces of many flowering plant species; these form the basis for the study of the role of structural colours in pollinator attraction. Self-assembly techniques, combined with scale able nanofabrication methods, were used to create complex artificial photonic structures inspired by those found in nature. In particular, the colour effect of a Papilio butterfly was mimicked and, by variation of its design motive, enhanced. All photonic effects described here are underpinned by state-of-the-art model calculations.

Advances in FDTD Computational Electrodynamics Allen Taflove,Ardavan Oskooi,Steven G. Johnson,2013 Advances in photonics and nanotechnology have the potential to revolutionize humanity's ability to communicate and compute. To pursue these advances, it is mandatory to understand and properly model interactions of light with materials such as silicon and gold at the nanoscale, i.e., the span of a few tens of atoms laid side by side. These interactions are governed by the fundamental Maxwell's equations of classical electrodynamics, supplemented by quantum electrodynamics. This book presents the current state-of-the-art in formulating and implementing computational models of these interactions. Maxwell's equations are solved using the finite-difference time-domain (FDTD) technique, pioneered by the senior editor, whose prior Artech House books in this area are among the top ten most-cited in the history of engineering. This cutting-edge resource helps readers understand the latest developments in computational modeling of nanoscale optical microscopy and microchip lithography, as well as nanoscale plasmonics and biophotonics.

New Aspects in Phosphorus Chemistry V Jean-Pierre Majoral,2005 Phosphorus chemistry is a diverse field and this volume focuses on new developments of old themes with different approaches and ideas, state of the art for two topics of general interest, and the emerging fields of research.
