The Pigmentary System James J. Nordlund, Raymond E. Boissy, Vincent J. Hearing, Richard A. King, William S. Oetting, Jean-Paul Ortonne, 2008-04-15 The most comprehensive and integrated book on pigmentation The Pigmentary System, Second Edition, gathers into one convenient, all-inclusive volume a wealth of information about the science of pigmentation and all the common and rare clinical disorders that affect skin color. The two

parts, physiology (science) and pathophysiology (clinical disorders), are complementary and annotated so that those reading one part can easily refer to relevant sections in the other. For the clinician interested in common or rare pigment disorders or the principles of teaching about such disorders, this book provides an immediate and complete resource on the biologic bases for these disorders. For the scientist studying the biology of melanocyte function, the book provides a list of disorders that are related to basic biological functions of melanocytes. New features of this Second Edition include: Completely new section on the basic science of pigmentation – explaining the integration of melanocyte functions with other epidermal cells and with various organ systems like the immune system New chapters on pigmentary disorders related to intestinal diseases, the malignant melanocyte, benign proliferations of melanocytes (nevi) and phototherapy with narrow band UV All clinical chapters include the latest genetic findings and advances in therapy More than 400 color images of virtually all clinical disorders The book is ideal for all dermatologists and especially those interested in disorders of pigmentation. It is of particular use for pediatric dermatologists and medical geneticists caring for patients with congenital and genetic pigmentary disorders. This authoritative volume will fill the gap for dermatology training programs that do not have local experts on pigmentation. Basic and cosmetic scientists studying pigmentation and melanocytes will find the science and clinical correlations very useful in showing human significance and relevance to the results of their studies.

The Saburo Hasegawa Reader Mark Dean Johnson, Dakin Hart, 2019-05-14 At publication date, a free ebook version of this title will be available through Luminos, University of California Press's Open Access publishing program. Visit www.luminosoa.org to learn more. The Hasegawa Reader is an open access companion to the bilingual catalogue copublished with The Noguchi Museum to accompany an international touring

exhibition, *Changing and Unchanging Things: Noguchi and Hasegawa in Postwar Japan*. The exhibition features the work of two artists who were friends and contemporaries: Isamu Noguchi and Saburo Hasegawa. This volume is intended to give scholars and general readers access to a wealth of archival material and writings by and about Saburo Hasegawa. While Noguchi's reputation as a preeminent American sculptor of the twentieth century only grows stronger, Saburo Hasegawa is less well known, despite being considered the most literate artist in Japan during his lifetime (1906–1957). Hasegawa is credited with introducing abstraction in Japan in the mid 1930s, and he worked as an artist in diverse media including oil and ink painting, photography, and printmaking. He was also a theorist and widely published essayist, curator, teacher, and multilingual conversationalist. This valuable trove of Hasegawa material includes the entire manuscript for a 1957 Hasegawa memorial volume, with its beautiful essays by philosopher Alan Watts, Oakland Museum Director Paul Mills, and Japan Times art writer Elise Grilli, as well as various unpublished writings by Hasegawa. The ebook edition will also include a dozen essays by Hasegawa from the postwar period, and one prewar essay, professionally translated for this publication to give a sense of Hasegawa's voice. This resource will be an invaluable tool for scholars and students interested in midcentury East Asian and American art and tracing the emergence of contemporary issues of hybridity, transnationalism, and notions of a "global Asia."

The Carbonic Anhydrases N.D. Carter, S.J. Dodgson, G. Gros, R.E. Tashian, 2013-06-29 As we approach the twenty-first century the problems of industrialization are evident: we find there is a greenhouse effect, the ozone layer is being depleted, the rain is acidified, and there is a terrible problem of increasing CO concentrations in the atmosphere. The carbonic anhydrases are a unique family of enzymes that solve these problems in the human body: they are responsible for converting CO₂ (a gas) to HCO₃⁻, which is the biggest intracellular buffer, with a concomitant decrease in a H⁺ ion. Globally, the functions of the carbonic anhydrases in photosynthesis in rain forests and in the algae and plankton that cover our oceans indicate that they are also of utmost importance in the maintenance of the acid-base balance on our planet. Although the whole field of CO₂ metabolism is enormous and still rapidly expanding, because of the research interests of the editors this book is mainly concerned with mammalian carbonic anhydrases. However, if the interested reader intends to purify carbonic anhydrases from nonmammalian sources, Dr. Chegwidden has provided the necessary information in Chapter 7. The carbonic anhydrases were first discovered in 1933; until 1976 there were thought to be only two isozymes. Since then CA I, II, IV, V, VI, and VII have been discovered and well characterized. There is, of course, no reason to believe that we have found them all.

Nano and Bio-Based Technologies for Wastewater Treatment Elvis Fosso-Kankeu, 2019-05-21 Presents recent challenges related to new forms of pollution from industries and discusses adequate state-of-the-art technologies capable to remediate such forms of pollution. Over the past few decades the boom in the industrial sector has contributed to the release in the environment of pollutants that have no regulatory status and

which may have significant impact on the health of humans and animals. These pollutants also referred to as emerging pollutants, are mostly aromatic compounds which derive from excretion of pharmaceutical, industrial effluents and municipal discharge. It is recurrent these days to find water treatment plants which no longer produce water that fits the purpose of domestic consumption based on newly established guidelines. This situation has prompted water authorities and researchers to develop tools for proper prediction and control of the dispersion of pollutants in the environment to ensure that appropriate measures are taken to prevent the occurrence of outbreaks due to sudden load of these pollutants in the water system. The chapters in this book cover a wide range of nano and bio-based techniques that have been designed for the real time detection of emerging contaminants in environmental water sources, geochemical models that are continuously improved for the prediction of inorganic contaminants migration from the mine solid wastes into ground and surface waters. Remediation strategies are also discussed and include effective techniques based on nanotechnology, advanced membrane filtration, oxidative and biodegradation processes using various types of nanocatalysts, biocatalysts or supporting polymer matrices which are under advanced investigations for their implementation at large scale for the removal of recalcitrant pollutants from polluted water. Nano and Bio-Based Technologies for Wastewater Treatment: Prediction and Control Tools for the Dispersion of Pollutants in the Environment is divided in two sections. The first section covers the occurrence of emerging pollutants in environmental water while the second section covers state-of-the-art research on the removal of emerging pollutants from water using sustainable technologies. A total of 13 chapters addressing various topics related to the two sections are essentially based on recent developments in the respective field which could have a significant impact on the enhancement of the performance of

wastewater treatment plants around the world, and especially in developing countries where access to clean and safe water remains a daily challenge.
