Michibiki Raymond S. Moore, The year was 1950 and Raymond Moore was a professor at Pacific Union College in California. One fateful Sunday he and his wife hosted two very special visitors from Japan, and after that dinner one door after another opened for the Moores, leading them to answer a call to missionary service in Japan. In this book, Dr. Moore recounts his experiences during his time at Japan Missionary College. In each story the hand of God and His leading is evident, even bringing royalty to the small Adventist school. Ultimately, with the dedication of the Moores, the help of a royal prince, and the willingness of the local people to entertain change, a program of true education was established in the Land of the Rising Sun.

Japan In Space Brian Harvey, 2023-11-16 Guided by genius engineer Hideo Itokawa, Japan's space program began with small scientific satellites more than 50 years ago. Since then, its space probes have travelled to the Moon, Venus, the asteroids and even a comet. The country launched weather satellites to warn of typhoons, communications satellites to connect the Japanese archipelago and remote sensing technology to observe the Earth and warn of climate change. Engineering technology satellites became the basis of Japan's electronic industry as Japanese astronauts flew into space, working on their Kibo module on the International Space Station. Now, Japan is one of Asia's leading space powers, alongside China and India, vying for influence in the region. Its solid and liquid-fueled rockets are estimated to be among the most advanced and reliable in the world, its technology among the best. This book examines the history of Japan's space program, the country's current state of development and its future. It describes the extensive infrastructure that has gone into the forging of Japan's picturesque oceanside launch sites, training centers, testing facilities and tracking stations. This book also outlines the politics of space in Japan, financial difficulties, its space industry, the symbiotic relationship with the United States and the recent sharp change-of-course to invest in military satellites. From the role of influential personalities, such as Hideo Shima and Shinichi Nakasuka, to political leaders, such as Yasuhiro Nakasone and Takeo Kawamura, you will read about how Japan has paved its own star-lit path

to space. The future may expect to send Japanese probes to Mercury and the moons of Mars, all while the first Japanese astronauts set foot on our own Moon and drive innovative rovers across its surface.

Utilization of Geospatial Information in Daily Life Yoshihide Sekimoto,Yasuhiro Kawahara,2023-05-02 This book focuses on geospatial information in living spaces, providing many examples of its collection and use as well as discussing the problems of how it is used and its future prospects. Geospatial information science is in the process of evolving and being systematized, with the technical and usage aspects of the real world stimulating each other. This book systematizes the technical aspects of positioning; of geography, which manages and represents what is measured in units of earth coordinates; and of data science, which aims to efficiently express and process geographic information, all by introducing contemporary examples that are systematized with regard to their use in our living spaces. Examples of geospatial information used in almost all aspects of our lives, including urban areas, transportation, disaster prevention, health and medical care, agriculture, forestry and fisheries, culture, ecology, and topography, are presented, along with examples of their use in each area. One of the major features of this book is that it describes the use of data from earthquake disasters that is unique to Japan, as well as the use of open data and personal data in Japan, which is a trend that is gaining attention in many countries. In this way the book systematically describes events and circumstances in living spaces that are revealed by the expression and analysis of geospatial data, with case studies and discusses their use in the IoT era.

In Defense of Japan Saadia Pekkanen,Paul Kallender-Umezu,2010-08-12 In Defense of Japan provides the first complete, up-to-date, English-language account of the history, politics, and policy of Japan's strategic space development. The dual-use nature of space technologies, meaning that they cut across both market and military applications, has had two important consequences for Japan. First, Japan has developed space technologies for the market in its civilian space program that have yet to be commercially competitive. Second, faced with rising geopolitical uncertainties and in the interest of their own economics, the makers of such technologies have been critical players in the shift from the market to the military in Japan's space capabilities and policy. This book shows how the sum total of market-to-military moves across space launch vehicles, satellites and spacecraft, and emerging related technologies, already mark Japan as an advanced military space power.

Asian Space Race: Rhetoric or Reality? Ajey Lele, 2012-10-21 This book explores the character and contours of the Asian Space Powers. At present, Asian states like China, Japan and India are found investing in space technologies with analogous social and scientific and probably with divergent military intents. Other Asian states like Israel, South Korea and Malaysia are also making investments in the space arena. States like Iran and North Korea are faulted for using space launches as a demonstrative tool to achieve strategic objectives. This work examines this entire maze of activities to unearth where these states are making these investments to accomplish their state-specific goal or are they also trying to surpass each other by engaging in competition. Explaining why and how these states are making investments towards achieving their socio-economic and strategic mandate this book infers that the possibility of Asian Space Race exists but is presently fairly diminutive.

Shinto Norito Ann Llewellyn Evans, 2007-02-26 This book presents, for the first time, a collection of ancient Japanese Shinto prayers in a format where English speaking readers can both understand the deep meaning of the translated text and can also pronounce the original Japanese words. Shinto is an ancient spiritual tradition, primarily practiced in Japan, which is now spreading its traditions to the western world. Its primordial rituals and traditions touch a deep chord within one's spiritual self. Shinto's focus on divinity of all beings and of all creation, on living with gratitude and humility, and on purification and lustration of one's self and environment will bring light and joy to any reader. The purpose of prayer and ritual as practiced in the Shinto tradition, is to reinsert ourselves into a divine state of being, not as a new position, but as an acknowledgement and reinforcement of what already exists. Ritual restores sensitive awareness to our relationship to the universe. Through purification and removal of impurities and blockages, we return to our innate internal brightness and cultivate a demeanor of gratitude and joy. Shinto rituals and prayers were created by ancient man over 2,000 years ago in a time when mankind was more intuitive about his relationship to this world. Because of this, the rites are archetypal and invoke deep emotion within the participants. This book of prayers will introduce the western reader to the deep spirituality of Shinto, providing explanation of the spiritual tradition and practice and providing a collection of 22 prayers for use in personal meditation and devotions.
