Flight Craft 8: Mikoyan MiG-31 Yefim Gordon,Dmitriy Komissarov,2011-10-30 The MiG-31 started life as an advanced derivative of the famous MiG-25P interceptor, becoming the first Soviet fourth-generation combat aircraft. First flown in 1975, it differed from its progenitor primarily in having a crew of two (pilot and weapons systems operator), a highly capable passive phased-array radar \_ a world first \_ and new R-33 long-range missiles as its primary armament. The maximum speed was an impressive Mach 2.82, the cruising speed being Mach 2.35. The type entered service in 1981; more than 500 copies were built between 1981 and 1994. The powerful radar and other avionics allowed the MiG-31 to operate as a 'mini-AWACS' scanning the airspace and guiding other interceptors to their targets; a flight of three such aircraft in line abreast formation could cover a strip 800 km (500 miles) wide. To this day the MiG-31 remains one of the key air defence assets of the Russian Air Force. The book describes the MiG-31's developmental history, including upgrade programmes, and features a full and comprehensive survey of the various MiG-31 model-making kits currently available on the market.

**Mikoyan-Gurevich MiG-21** Alexander Mladenov,2014-06-20 The MiG-21 (NATO reporting name Fishbed) firmly holds the title of the world's most widely built and used jet fighter, with more than 10,000 units rolling off the lines of three plants in the former Soviet Union. The type was also built under

license in India and Czechoslovakia, and without license in China until the late 2000s. Designed as a Mach-2 light tactical fighter, its original prototype, the Ye-6/1, was first flown in 1958. The first production variant of the type, designated the MiG-21F, appeared in 1960 and its improved sub-variant, the MiG-21F-13 (Type 74, NATO reporting name Fishbed-C), was made available for export by 1961. It was a simplified daytime short-range, clear-weather interceptor and tactical fighter.

*Mikoyan Mig-19* Dmitriy Komissarov, Yefim Gordon, 2017 Created by the famous Mikoyan Design Bureau in the early 1950s, the MiG-19 fighter was the Soviet Union's first true supersonic fighter that could exceed Mach 1 in level flight. The baseline version with conventional elevators (known to the West as Farmer-A) achieved initial operational capability with the Soviet Air Force as early as 1954, concurrently with its American counterpart, the F-100 Super Sabre. Vertical manoeuvrability was soon found to be inadequate and led the Mikoyan OKB to create a version with an all-flying horizontal tail - the MiG-19S Farmer-C day fighter, which was built and operated on a much wider scale. The radar-equipped first Soviet supersonic all-weather interceptor, the MiG-19P soon followed together with the MiG-19PM armed with a quartet of beam-riding air-to-air missiles. Special versions also included the SM-50 and SM-51 prototypes equipped with a liquid-fuel rocket booster to improve high-altitude performance and the SM-30 with a zero-length launch capability. In addition to serving its home country, the MiG-19 was exported to the Soviet Union's Warsaw Pact allies including China who created its own variants which had no Soviet equivalent such as the JJ-6 trainer and the radical Q-5 attack aircraft. In this latest book in the Famous Russian Aircraft series, the authors describe the MiG-19's development and its operational history at home and abroad including its involvement in conflicts in Asia and the Middle East. Over 600 black and white and colour photos, many hitherto unpublished combine with colour side views and cutaway drawings to provide a detailed insight for historians and modellers alike.

**OKB Mikoyan** E. Gordon, Yefim Gordon, Dmitriy Komissarov, 2009 A complete history of the famous Mikoyan Design Bureau from its establishment in 1939 to the present day. Every type developed by the Mikoyan OKB is dealt with in detail, with descriptions of all known versions and a wealth of recently declassified data.

*The Soviet Cuban Missile Crisis* Sergo Anastasovich Mikoyan, 2012 300 pages of documents include: telegrams, memoranda of conversations, instructions to diplomats, etc.

**Mikoyan-Gurevich MiG-21 Pilot's Flight Operating Instructions** Nato, 2008-09 The Mikoyan-Gurevich MiG-21 is known in NATO circles as the "Fishbed". Designed as a Mach 2.0 interceptor, the plane holds the distinction of being produced in greater numbers than any other jet aircraft. The Fishbed flew in combat in Vietnam, where it held its own against the F-105 Thunderchief. During the 1973 Arab-Israeli War, 17 Israeli aircraft were shot down, for a loss of six Egyptian MiG-21s. The plane also flew in combat in the Indo-Pakistani War of 1971, during the Soviet invasion of Afghanistan, and in Yugoslavia. Today, over 28 of the world's air forces continue to fly MiG-21s. Originally printed by NATO, this English-language handbook provides a glimpse inside the cockpit of this incredible plane. The manual was recently declassified and is here reprinted in book form. Care has been taken to preserve the integrity of the text

**Mikoyan MiG-35** Megan Cooley Peterson, 2018-08-07 Militaries around the world use aircraft to defend and attack. Huge bombers take out the enemy. Fighter jets hide from radar. With hi/lo text and powerful infographics, readers will soar along with the fastest and most powerful military aircraft in the air today.

**Mikoyan MiG-29 Fulcrum** E. Gordon, Yefim Gordon, 1999 Developed to meet the Soviet Union's requirement for a dual fighter and ground-attack aircraft, the MiG-29 entered operational service in 1983. Russian author and aviation expert Yefim Gordon interviews Mikoyan design and engineer personnel to reveal the development and operational history of the MiG-29. With access to all design and production records, as well as declassified technical drawings and photographs, Gordon has assembled the ultimate reference to this Cold War fighter, of which an estimated 500 are still believed to be in service around the globe, including in Russia, Bulgaria, Cuba, Czechoslovakia, Hungary, India, Iraq, Iran, Poland and Malaysia.

**Mikoyan-Gurevich MiG-21** Alexander Mladenov, 2014-06-20 The MiG-21 (NATO reporting name Fishbed) firmly holds the title of the world's most widely built and used jet fighter, with more than 10,000 units rolling off the lines of three plants in the former Soviet Union. Mikoyan MiG-31: Famous Russian Aircraft Yefim Gordon,Dmitriy Komissarov,2020 As early as 1965, when the MiG-25 interceptor was in the midst of its test program, the Mikoyan Design Bureau started work on an even more capable two-seat interceptor meant to provide adequate protection for the huge expanses of Siberia and the Soviet Far East. Though superficially resembling a MiG-25 with tandem cockpits, the aircraft was soon designated the MiG-31. Initially dubbed Super Foxbat in the West but soon renamed Foxhound, the MiG-31 first flew on 16 September 1975 and, after a five-year trials program, achieved initial operational capability in 1980. Full-scale deliveries began in 1982 to units covering the Moscow Air Defense Zone, the Arctic and the Far East. One of the effects was that the SR-71s now stayed away from the Soviet borders. Efforts to improve the Foxhound began right away. In-flight refueling capability was added in 1989 to overcome the problem of inadequate range. Next, the MiG-31B, featuring upgraded avionics and better weapons, entered production in 1990; existing MiG-31s were brought up to the new standard (except for IFR capability) as the MiG-31BS. The radically improved 'Generation 4+' MiG-31M featuring a new WCS and new R-37 ultra-long-range AAMs first flew in 1985 but never entered production because of funding shortages. Today, the MiG-31s remains one of modern Russia's key air defense assets, and new versions keep appearing. The book gives the complete development and service history of this remarkable aircraft and is richly illustrated with color photos and color artwork throughout.

*Mikoyan Mig-29 and Mig-35* Yefim Gordon,Dmitriy Komissarov,2019-04 Designed as a mass-produced and relatively cheap light tactical fighter, the MiG-29 first flew on October 6, 1977. After extensive flight testing, it entered production in 1982 and deliveries to the Soviet Air Force began in 1983. In addition to its main counter-air role, the aircraft had a useful air-to-ground capability, carrying free-fall bombs and unguided rockets. From the outset the MiG-29 had been steadily developed beyond the fourth generation with changes to the airframe, avionics and weapons systems and new variants were produced in the early 2000s. The MiG-29 known as the Fulcrum in the west, became both one of the Soviet Air Force's main fighter types and a successful Soviet export with nearly a third of the 1,500 first-generation Fulcrums built up to 1996 being exported. It saw service with 25 nations around the globe. Apart from the (former) Warsaw Pact nations, notable customers include India, Malaysia, Iraq, Yemen, Eritrea, Cuba and Peru. This revised and expanded edition of the definitive history of the aircraft charts in detail the MiG-29's evolution from the earliest design studies to the latest multi-role

versions. It includes an enormous amount of new information, a listing of known operators and production lists together with a magnificent collection of previously unpublished photos.

**Mikoyan MIG-29** E. Gordon, Yefim Gordon, 2006 Complete coverage of the MiG-29 from every possible angle, with details of all the latest versions of the MiG-29 which have not been covered in the Western press before. Profusely illustrated.

**Mikoyan MiG-29** Hans Halberstadt, 1992 Briefly traces the history of the MiG-29, describes its physical characteristics and capabilities, and compares it with Western fighters.

The Mikoyan-Gurevich Mig-3 Vol. I Dariusz Paduch, 2022-01-31 The MiG-3 fighter plane, like the history of the creation of the Mikoyan and Gurevich (Микоян и Гуревич) design bureau, is relatively well known to anyone interested in the history of Soviet aviation. Many books and articles have been published about this machine, but information about the circumstances of the birth of the project and the conditions of its creation are very brief and concise. MiG-1 and MiG-3 were the most numerous new generation fighters in Soviet aviation at the time of the German invasion of the USSR. They played a very important role in the first period of the war. Until now, it has been assumed in the literature that this applies mainly to the use of these aircraft during the battle of Moscow, as well as capital's and Leningrad's air defense, but MiGs also took on a large weight of air combat at the front in 1941.

**Mikoyan MiG-31** E. Gordon, Yefim Gordon, 2005 The MiG-31 Foxhound long-range interceptor flew in prototype form as the Ye-155MP in 1975 and entered production in 1979, with the first regiments becoming operational in 1982. It has also been sold to China, and it remains in service in significant numbers. Yefim Gordon, the doyen of Russian aviation writers, continues to amass an outstanding archive of previously unpublished materials. Though the MiG-31 was covered to some extent in the now out-of-print and sought-after Aerofax on the MiG-25 and -31, this new book will be close to a definitive work on this important aircraft and include an enormous amount of newly released and acquired information and a splendid array of unpublished photographs (including detailed walk-around shots) and drawings. The narrative of course includes detailed discussion of the background to the project, its development, versions, service, weaponry, and comparisons with its contemporaries such as the F-14 Tomcat. The aircraft is a favorite with enthusiasts and modelers, and the extensive coverage, both technical and operational, backed up by high-quality images and drawings, will have

wide appeal.

*Mikoyan Mig-29 Fulcrum Pilot's Flight Operating Manual (in English)* North Atlan Treaty Organization (Nato),2007-08-01 En instruktionsbog (Flight Manual) for MiG-29 Fulcrum.

**Mikoyan-Gurevich MiG-19** E. Gordon,Yefim Gordon,2003 Following naturally on from the MiG-15 and MiG-17 in the series, the MiG-19 'Farmer' now receives the full Aerofax treatment. Appearing in the 1950s, the MiG-19 represented a major technological leap for the VVS, as it was one of their first fighters capable of accommodating air-to-air missiles, ground color intercept system and other advances. By the end of the 1950s it had become the standard VVS fighter and was integrated into the inventories of most Warsaw Pact countries and other Soviet allies. It was produced in many thousands in the USSR, Czechoslovakia and China (as the J-6, JJ-6 and X-5 Fantan); a significant number of export customers included Cuba, Egypt, Albania, Vietnam and Pakistan. As usual, Yefim Gordon has come up with a mass of previously unpublished information and photos from original Russian resources. Dimensions: 8-1/2 x 11inches # of color photographs: Approximately 200 black & white and color photos

**Sukhoi S-37 and Mikoyan Mfi** Yefim Gordon,2001 Conceived in the early 1980s to ease the threat posed by the American ATF program, these fighters were developed as the Soviet Union's fifth-generation fighters. This book gives a detailed account of how Russia's two leading fighter aircraft designers competed for the order and how a third contender never made it to the hardware stage. It deals with the way these aircraft were conceived, designed, built, and flown.
