**Mig-23 Mf** Krzysztof Barcz,Dariusz Warsaw,2010-01-05 \* Includes free decals and masking foil \* Packed with color photos The Mikoyan-Gurevich MiG-23 is a swing-wing fighter aircraft, designed by the Mikoyan-Gurevich bureau in the Soviet Union. It is considered to belong to the Soviet Third Generation aircraft category along with similar-aged Russian-produced fighters such as the MiG-25 Foxbat. It was the first Soviet fighter with a look-down/shoot-down radar and beyond visual range missiles, and the first MiG production fighter plane to have intakes at the sides of the fuselage. Production started in 1970 and reached large numbers with over 5,000 aircraft built. Today the MiG-23 remains in limited service with various export customers. This album of detailed photographs is invaluable for the modeler or enthusiast alike. About the Series This is a classic series of highly illustrated books on the best machines of war, with several hundred photographs of each aircraft or vehicle. With close-up views of the key features of each machine, including its variations, markings and modifications, customizing and creating a model has never been easier. Includes extra features such as decals and masking foil.

**MiG-23 Flogger in the Middle East** Tom Cooper,2018-05 This is a detailed history of the operational service of this Soviet-manufactured interceptor and its fighter-bomber variants in service with Algerian, Egyptian, Iraqi, Libyan, and Syrian air forces, since 1974.

**MiG-23MF, MiG-23UB** Adam Gołabek,Marian Mikolajczuk,Cezary Piotrowski,2010 This new title in the established and popular Polish Wings series tells the story of the MiG-23 aircraft in the Polish Air Force. The acquisition and operations of these Russian aircraft in Poland is told in detail, illustrated with many previously unpublished photos; color schemes and markings are also described and illustrated.

*Mikoyan MiG-23 and MiG-27: Famous Russian Aircraft* Yefim Gordon,Dmitriy Komissarov,2019-09  
Originally conceived as a replacement for the famous MiG-21, changing priorities turned the MiG-23 into a STOL fighter with variable-geometry wings that first flew in June 1967. After two years of testing, the aircraft, codename Flogger, entered service in 1969. From then on development of the Flogger proceeded along two parallel lines originally as a fighter/interceptor with a two-seat trainer variant and later as a fighter/bomber which evolved into the MiG-27 used by the Soviet Air Force. This, in turn, was progressively improved as the MiG-27D/MiG-27M and the MiG-27K. The MiG-23 family was widely exported. New aircraft were supplied to the Soviet Union's Warsaw Pact allies and selected nations in the Middle East, Africa and Asia. Later, second-hand machines were sold from CIS stocks to various parts of the world, which allowed the MiG-23 to remain active abroad longer than in Russia where single-engined combat jets had been phased out in 1997. The Flogger saw a good deal of action. Soviet MiG-23MLDs were actively used in the Afghan War; elsewhere, the fighter variants saw action in Syria (both in against Israel in the 1970s and in the Syrian Civil War), Libya, Iraq, Angola and Sudan. The fighter-bombers also fought in Afghanistan, Iraq, Libya and Sri Lanka. This comprehensive book describes the development and service history of all variants of these aircraft, featuring fleet lists and numerous rare photos and color profiles.

Mikoyan-Gurevich MiG-21 Alexander Mladenov,2014-06-20 The MiG-21 (NATO reporting name Fishbed) firmly holds the title of the world's most widely built and used jet fighter, with more than 10,000 units rolling off the lines of three plants in the former Soviet Union. The type was also built under license in India and Czechslovakia, and without license in China until the late 2000s. Designed

as a Mach-2 light tactical fighter, its original prototype, the Ye-6/1, was first flown in 1958. The first production variant of the type, designated the MiG-21F, appeared in 1960 and its improved sub-variant, the MiG-21F-13 (Type 74, NATO reporting name Fishbed-C), was made available for export by 1961. It was a simplified daytime short-range, clear-weather interceptor and tactical fighter.

*F-15C Eagle vs MiG-23/25* Douglas C. Dildy,Tom Cooper,2016-04-21 Designed following the relatively poor performance of America's multi-role fighters during the Vietnam War, the F-15 Eagle was conceived as a dedicated air superiority fighter. But, having trained for 15 years in the Eagle it wasn't Eastern Bloc operated MiGs that the F-15 eventually came up against, but pilots of Saddam Hussein's Iraqi airforce. This book analyses the combat between the American and Soviet 'Cold War fighters' in a balanced manner, examining how the technical abilities of the aircraft combined with the different levels of training available to opposing pilots and groundcrews allowed the F-15s to destroy the Iraqi offensive abilities within weeks of the First Gulf War starting. Packed with artwork, illustrations and photographs, this book places the reader in the cockpit during one of the last major

dogfighting air wars in modern history.

*Red Eagles* Steve Davies, 2012-01-24 When two Navy F-14 Tomcats engaged and shot down two Sukhoi Su-22 jet fighters in 1981, they drew on experience and tactics that they had learned from a previous encounter with MiG jet fighters. The difference between the two encounters was that in the first, the enemy fighters were flown by American pilots assigned to a top secret squadron hidden at a remote airfield in the ultra-secret Tonopah Nuclear Test range, Nevada. In the second, the Sukhoi fighters were flown by Libyan pilots attempting to enforce Colonel Qadaffi's 'Line of Death' over the Gulf of Sidra. From the mid-1960s until the end of the Cold War, the United States Air Force acquired and flew Russian-made MiG jets, eventually creating a secret squadron dedicated to exposing American fighter pilots to enemy MiGs. Following underperformance in the Vietnam War, the USAF began to study MiGs in order to improve fighter pilot training. This then developed into the black Constant Peg program. In this program, MiGs were secretly acquired, and made airworthy, a difficult task without manuals or parts. A secret base was found to operate the planes from; and then ace pilots were found and trained to not only fly the assets, but fly them as they were flown by America's enemies. Finally, a program of exposing American fighter pilots to the MiGs was developed. In all, more than 1,600 American fighter pilots would train against America's secret MiGs between 1974 and 1989. Uncovering the story of the secret MiGs in America during the Cold War, and specifically Constant Peg and the 4477th Test & Evaluation Squadron, is a challenge because much of the information has been destroyed, or remains classified. To piece together the story of this group of men who provided America's fighter pilots with a level of training that was the stuff of dreams, author Steve Davies has interviewed over thirty of the Red Eagle pilots, along with other members of the squadron. This paperback edition includes new material on HAVE IDEA and other HAVE programs;

making the MiGs airworthy in 1977 from the maintainers' perspective; and the intelligence activities of MiG expert at the Foreign Technology Division Mike Coyle. The result is a fascinating glimpse into a black program that enabled American fighter pilots to go into combat having already met and defeated their first MiG. Hardcover edition ISBN: 9781846033780

**Su-25 'Frogfoot' Units In Combat** Alexander Mladenov, 2015-04-20 This volume details the technical features and operational performance of the Soviet Su-25 'Frogfoot', which proved itself as a durable and versatile attack aircraft in a variety of theatres such as Afghanistan, Georgia and Ossetia. Today it is widely accepted as the true successor to the types of specialised ground--attack aircraft that emerged during World War II. This book illuminates the service history of the 'Frogfoot' in over 30 years of combat using first-hand accounts and revealing archive photographs. The awkward-looking Su-25 has often been underrated, but the faithful 'Frogfoot' is now slated to remain in service with most of its current operators across the globe until at least 2020. This study explores the successes of the 'Frogfoot' in full, demonstrating its strengths as a formidably armed, armoured and very agile attack aircraft.

**Iranian F-4 Phantom II Units in Combat** Farzad Bishop, Tom Cooper, 2012-11-20 Different versions of the jet have provided the backbone of the frontline strength of the Iranian air force since the 1970s, and whole generations of Iranian pilots and ground personnel have been trained to fly and maintain them. Indeed, the type bore the brunt of active combat operations during the long war with Iraq. Iranian F-4 Phantom IIs were also some of the best equipped examples ever exported by the USA. Some Iranian Phantom II pilots gathered immense experience on the type, flying it in combat for more than ten years. This book removes the veil of secrecy surrounding Iranian Phantom II operations since the war with Iraq.

*MiG-23/27 Flogger* E. Gordon, Yefim Gordon, Keith Dexter, 2005 The latest title in the renowned Aerofax series is a detailed history of the development and operation of the Soviet interceptor, the MiG-23/27, code named in the west, Flogger. In the era of the Cold War, the military planners on both sides of the Iron Curtain were very aware of the threat to their security both from bombers which could carry nuclear weapons and from spyplanes. Thus it was deemed essential to have fast fighter aircraft which could intercept and destroy such incoming threats. The MiG-23 was developed to succeed the MiG-21 as the standard Soviet interceptor. It was a major advance on the earlier aircraft. Its swing-wing configuration was a generation on from its predecessor. Deliveries began in 1972 and in excess of 3,000 aircraft were built before production ended in 1986. As was the case with many Soviet types, the MiG-23 was widely exported to satellite or friendly countries. The MiG-23 saw service with air forces in the Middle East, the Far East, Cuba and Eastern Europe and a licenced version was built in India. The book also covers the history and operation of the MiG-27, a development of the MiG-23. This was a tactical strike aircraft with a completely redesigned forward fuselage which was produced in significant quantities from the late 1970s onwards. Both of these important types will be covered in the usual and well regarded Aerofax style which combines a thoroughly researched narrative with many photographs. This volume in the series will complete the Aerofax coverage of MiG design bureau's major modern types.

Iranian F-14 Tomcat Units in Combat Tom Cooper, Farzad Bishop, 2012-11-20 So formidable an opponent did the Iraqi airforce consider the F-14 that during the Iran-Iraq war, they ordered their pilots not to engage F-14s and the presence of one in an area was usually enough to empty it of Iraqi aircraft. Officially losses were tiny; only one F-14 was lost in aerial combat (to a MiG-21), one to a control problem and one downed by a ground-to-air missile. This book looks at the F-14's Iranian

combat history and includes first hand accounts from the pilots themselves. It will consider key engagements and the central figures involved, illustrating the realities, successes and failures of the Iranian air campaign.

MiG-21 Units of the Vietnam War István Toperczer, 2012-11-20 Having honed their piloting skills on the subsonic MiG-17 and transonic MiG-19, the Vietnamese Peoples' Air Force (VPAF) received their first examples of the legendary MiG-21 supersonic fighter in 1966. Soon thrown into combat over North Vietnam, the guided-missile equipped MiG-21 proved a deadly opponent for the USAF, Navy and Marine Corps crews striking at targets deep into communist territory. Most of the VPAF's 12+ aces scored their bulk of their kills in the MiG-21, which was then the best fighter produced by Russia's premier fast jet manufacturer, Mikoyan Gurevich. Well over 200 MiG-21s were supplied to the VPAF, and the numerous models and the schemes they wore are chronicled in great detail in this unique volume.

The Mikoyan-Gurevich Mig-3 Vol. II Dariusz Paduch, 2022-04-30 The I-200 fighter project was a compromise between design office's capabilities, realities of the Soviet aviation industry, with its available technologies, and military requirements. According to the brief description of the MiG-3 from 1941, it was, in terms of its purpose, an interceptor, but, interestingly, it could also be used as... an attack aircraft, or a light, fast dive bomber. Both the I-200 prototypes and the later MiG-1 and MiG-3 were single-seat, single-engine, mixed-design low-wing aircraft. Front part of the fuselage, together with the center wing, up to the rear wall of the pilot's cockpit, was made of metal. Only the tail part of the fuselage and wing consoles were wooden. Vertical stabilizer, which was an integral part of the fuselage, was made of wood, too, but horizontal stabilizer was all-metal. Rudders and ailerons had a metal construction and canvas cover. Undercarriage was made of chromansil steel. In front part of the

fuselage there was a pilot's cabin with a seat, instrument panel and controls, front fuel tank, main offensive armament, water cooler and other components. Center wing was attached to the front part of the fuselage at seven points, the rear part at four points, while the engine mount was supported by two.

Mikoyan MiG-31: Famous Russian Aircraft Yefim Gordon,Dmitriy Komissarov,2020 As early as 1965, when the MiG-25 interceptor was in the midst of its test program, the Mikoyan Design Bureau started work on an even more capable two-seat interceptor meant to provide adequate protection for the huge expanses of Siberia and the Soviet Far East. Though superficially resembling a MiG-25 with tandem cockpits, the aircraft was soon designated the MiG-31. Initially dubbed Super Foxbat in the West but soon renamed Foxhound, the MiG-31 first flew on 16 September 1975 and, after a five-year trials program, achieved initial operational capability in 1980. Full-scale deliveries began in 1982 to units covering the Moscow Air Defense Zone, the Arctic and the Far East. One of the effects was that the SR-71s now stayed away from the Soviet borders. Efforts to improve the Foxhound began right away. In-flight refueling capability was added in 1989 to overcome the problem of inadequate range. Next, the MiG-31B, featuring upgraded avionics and better weapons, entered production in 1990; existing MiG-31s were brought up to the new standard (except for IFR capability) as the MiG-31BS. The radically improved 'Generation 4+' MiG-31M featuring a new WCS and new R-37 ultra-long-range AAMs first flew in 1985 but never entered production because of funding shortages. Today, the MiG-31s remains one of modern Russia's key air defense assets, and new versions keep appearing. The book gives the complete development and service history of this remarkable aircraft and is richly illustrated with color photos and color artwork throughout.

**The Mikoyan-Gurevich Mig-3 Vol. I** Dariusz Paduch, 2022-01-31 The MiG-3 fighter plane, like the history of the creation of the Mikoyan and Gurevich (Микоян и Гуревич) design bureau, is relatively well known to anyone interested in the history of Soviet aviation. Many books and articles have been published about this machine, but information about the circumstances of the birth of the project and the conditions of its creation are very brief and concise. MiG-1 and MiG-3 were the most numerous new generation fighters in Soviet aviation at the time of the German invasion of the USSR. They played a very important role in the first period of the war. Until now, it has been assumed in the literature that this applies mainly to the use of these aircraft during the battle of Moscow, as well as capital's and Leningrad's air defense, but MiGs also took on a large weight of air combat at the front in 1941.

Mikoyan MiG-25 Foxbat Yefim Gordon, 2007-08 This latest Red Star title examines the history, development, and operational career of the MiG-25 both with the air forces of the Soviet Union and in those countries to which the aircraft was exported.
