Transactions on Computational Collective Intelligence XX Ngoc Thanh Nguyen,Ryszard Kowalczyk,Béatrice Duval,Jaap van den Herik,Stephane Loiseau,Joaquim Filipe,2016-01-05 These transactions publish research in computer-based methods of computational collective intelligence (CCI) and their applications in a wide range of fields such as the semantic Web, social networks, and multi-agent systems. TCCI strives to cover new methodological, theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals (artificial and/or natural). The application of multiple computational intelligence technologies, such as fuzzy systems, evolutionary computation, neural systems, consensus theory, etc., aims to support human and other collective intelligence and to create new forms of CCI in natural and/or artificial systems. This twentieth issue contains 11 carefully selected and revised contributions.

The Great Transformation Judith Bessant, 2018-04-24 While AI, robots, bio-technologies and digital media are transforming work, culture and social life, there is little understanding of or agreement about the scope and significance of this change. This new interpretation of the 'great transformation' uses history and evolutionary theory to highlight the momentous shift in human consciousness taking place. Only by learning from recent crises and rejecting technological determinism will governments and communities re-design social arrangements that ensure we all benefit from the new and emerging technologies. The book documents the transformations underway in financial markets, entertainment, medicine, affecting all aspects of work and social life. It draws on historical sociology and co-evolutionary theory arguing that the radical evolution of human consciousness and social life now underway is comparable to, if not greater than the agrarian revolution (10,000 BCE), the explosion of science, philosophy and religion in the Axial age (600 BCE), and the recent industrial revolution. Turning to recent major socio-economic crisis, and asking what can be learnt from them, the answer is we cannot afford this time around to repeat the failures of elites and theoretical systems like economics to attend appropriately to radical change. We need to think beyond the constraints of determinist and reductionist explanations and embrace the idea of deep freedom. This book will appeal to educators, social scientists, policy-makers, business leaders and students. It concludes with social design principles that can inform deliberative processes and new social arrangements that ensure everyone benefits from the affordances of the new and emerging technologies.

Idols and Celebrity in Japanese Media Culture P. W. Galbraith, J. G. Karlin, 2012-08-30 This is the most complete and compelling account of idols and celebrity in Japanese media culture to date. Engaging with the study of media, gender and celebrity, and sensitive to history and the contemporary scene, these interdisciplinary essays cover male and female idols, production and consumption,

industrial structures and fan movements.

LO: TECH: POP: CULT Priscilla Guy, Alanna Thain, 2024-04-24 This edited collection assembles international perspectives from artists, academics, and curators in the field to bring the insights of screendance theory and practice back into conversations with critical methods, at the intersections of popular culture, low-tech media practices, dance, and movement studies, and the minoritarian perspectives of feminism, queer theory, critical race studies and more. This book represents new vectors in screendance studies, featuring contributions by both artists and theoreticians, some of the most established voices in the field as well as the next generation of emerging scholars, artists, and curators. It builds on the foundational cartographies of screendance studies that attempted to sketch out what was particular to this practice. Sampling and reworking established forms of inquiry, artistic practice and spectatorial habits, and suspending and reorienting gestures into minoritarian forms, these conversations consider the affordances of screendance for reimaging the relations of bodies, technologies, and media today. This collection will be of great interest to students and scholars in dance studies, performance studies, cinema and media studies, feminist studies, and cultural studies.
