**Mi-28. Night Hunter and Others** Jakub Fojtik, 2017-03-19 The Mil Design Bureau, led by Mikhail Leonteyevich Mil, was one of the leading Soviet plants promoting combination of helicopters and firepower. Mil was personally involved in the development of a prewar A-7 autogyro equipped with a machine gun for its own defense and two more for destroying ground targets. However, this type did not reach mass production. But Mil continued thinking about arming the rotorcraft, especially during his practice design of several Bratukhin helicopters, of which some models were intended for artillery spotting and clearly showed that helicopters could play an important role in the army and could be a part of front line units. When the Mi-1 helicopter was test flown for the first time on 20th of September 1948, it was clear that a very versatile type was born. It became the first mass produced Soviet helicopter with a wide variety of special variants for both civil and military applications. It had just entered the regular service with the Soviet Army, when US forces began using their Bell OH-13s for attack missions in Korean War.

**Mil Mi-24 Hind Attack Helicopter** Yefim Gordon, Dmitrii Komissarov, 2001 The Russian-built Mil Mi-24 is one of the best known and most prolific combat helicopter in the world. This volume includes an introductory explanation of the concept and a detailed development history of the helicopter. Descriptions of existing versions include test beds.

**Gator on the Rise** Alexander Mladenov, 2016-10-15 The Kamov Ka-50 (NATO code name Hokum) was developed as a new-generation heavily-armored attack helicopter - originally conceived as a one-to-one replacement of the Mi-24 Hind. The program was launched at the Moscow-based Kamov Experimental Design Bureau in the late 1970s. The concept - promoted by the then young and inventive head of Kamov, Sergey Mikheev - called for an unorthodox, well-protected, agile and small-size attack machine. The unorthodox attack rotorcraft made its maiden flight in June 1982. It pioneered the Kamov's trademark co-axial rotor scheme, combined with a highly automated flight/navigation/targeting suite and long-range antitank guided missiles. In the late 1980s - after a protracted head-to-head competition pitted against the Mil Mi-28 - it was judged as being definitely superior to its competitor and was subsequently ordered for serial production. The first production-standard Ka-50 took to the air in May 1991 and the new type was formally commissioned into Russian Army Aviation Service in August 1995. As many as five prototypes and 13 production-standard helicopters were manufactured between 1982 and 2009. The single-seat and highly-automated Ka-50, however, appeared on the scene at just the wrong time, with its production launched during the

dissolution of the mighty Soviet Union and the onset of sharp cuts in Russia's defense budget, which led to its termination in the late 2000s. First design work on a two-seat derivative of the Ka-50 - designated as the Ka-52 Alligator - commenced as early as 1994 (initially as a company-funded venture). The first prototype - using the fuselage of a production-standard Ka-50 with a new nose section - was rolled out in November 1996 and made its maiden flight in the hover on 25 June 1997. In 2003, the Ka-52 successfully completed the first phase of the Russian military testing and evaluation effort - covering the flight performance. After three years, the Russian MoD finally allocated a budget for systems development testing and evaluation to be used within the framework of the second phase of the Ka-52's state testing effort. In addition, the Russian MoD allocated funds to setting up a production line at the AAC progress plant in Arsenyev - situated in Russia's Far Eastern territories. Even before completion of this effort, the initial production-standard Ka-52s were rolled out in the second half of 2010 and handed over to the Army Aviation Center of Combat Training and Aircrew Conversion at Torzhok in December that year. Currently, the Ka-52 is the main new-generation type of the Russian Army Aviation Service, with approximately 200 examples ordered - plus another 36 for the Russia Naval Aviation.

Helicopters Stanley S. McGowen,2005-05-24 First envisioned by Leonardo da Vinci and first deployed in World War II, the helicopter is now a universal icon of modern warfare, a key component of combat planning around the world, and one of the military's most versatile and effective tools. Helicopters: An Illustrated History of Their Impact covers the development of helicopters from a concept in Leonardo daVinci's mind to the first successful machines in the early 1900s to the latest tilt-rotor designs. Time and again, in a story of constant innovation, designers answered the concerns of military planners with more maneuverable, more capable rotorcraft. With expert analysis and specific details of every significant model ever used, Helicopters shows how these once denigrated machines became essential to a variety of missions (reconnaissance, transport, attack, support, evacuation, urban combat, quick strikes behind enemy lines, and more). In addition, the book looks at the impact of rotorcraft beyond the military, including their ever-widening role in emergency medical care, police work, traffic control, agriculture, news reporting, and more.
