

Military Transport Aircraft

E.R. Johnson

American Military Transport Aircraft Since 1925 E.R. Johnson,2013-04-23 Without the support of airlift, the modern American military machine would be brought to a standstill. Since World War II--beginning with the Cold War and continuing up to the present day--the U.S. armed forces have come increasingly to rely upon airlift for mobility. The power to rapidly move and thereafter support a military operation--anywhere in the world, at any time--has become a foundational element of American defense policy. This work provides the reader with a comprehensive historical survey--including technical specifications, drawings, and photographs--of each type of fixed-wing aircraft used by U.S. military forces over a nearly 90-year period to carry out the airlift mission.

This Is the C-17 Globemaster III Loraine D. Nunley,2014-07-17 The C-17 Globemaster III aircraft is world renowned as a versatile and respected military transport plane. Its technological advances and capabilities has earned it awards and honors among the military community. While its primary usage is

military, its versatility makes it useful in other capacities as well. This book is intended to introduce children to this award winning aircraft, but adults may also find themselves eager to learn more about this mighty workhorse.

MATS Stanley M. Ulanoff, 1964 Dramatic account of operations of the U.S. Military Transport Service in various parts of the world, including the Berlin Airlift, Lebanon, the Congo, Suez, etc.

Antonov's Heavy Transports Yefim Gordon, Dmitriy Komissarov, 2020-11-28 This book charts the development and service history of the Antonov design bureau's heavy transport aircraft. In the late 1950s, the Antonov design bureau began developing the An-22 heavy military transport, intended to carry 50 tons. Powered by four 15,000 hp turboprops, it was the world's heaviest transport when it first flew in February 1965. The four-turbofan An-124 was again the world's most capable airlifter when it emerged in 1982, with a payload of 120 tons. It proved its worth in military and humanitarian operations and earned acclaim as a commercial freighter after 1991 for carrying heavy and outsized items. The unique six-engined An-225 Mriya was created for carrying the Buran space shuttle. Despite the demise of the Buran program, the aircraft found use on the heavy/outsized cargo transportation market. It is illustrated by a wealth of new photos and color artwork, as well as line drawings.â

Aircraft of the United States' Military Air Transport Service 1948 to 1966 Nicholas M. Williams, 1999 Formed at the start of the 'Cold War' era, the Military Air Transport Service sprung out of the newly-created USAF to serve the US Military around the world. From the Berlin Airlift to Vietnam, MATS

crews and aircraft were found in every global 'hot spot'. This book not only provides the history of the Service, it also delivers an in-depth look at each type of aircraft MATS operated. From the C-47 to the C-133, the OA-10 to the U-2, this superb volume contains a dynamic collection of high quality, large format photographs of MATS global air power.

C-17 Globemaster III Ken Neubeck, 2021-11-28 The McDonnell Douglas / Boeing C-17 Globemaster III's design, construction, and operational history are presented in this book. With over 280 aircraft built, the Globemaster III is one of the workhorses for the US Air Force as well as a number of foreign countries such as Britain, Australia, Canada, India, Qatar, and Kuwait. It was designed primarily as both a strategic and tactical airlift aircraft but has also been widely used in added roles such as medical evacuation and airborne troop drops. It saw combat during operations Enduring Freedom and Iraqi Freedom and has also been deployed on humanitarian missions throughout the world since its introduction in 1995.

The World's Most Powerful Military Aircraft Thomas Newdick, 2016-12-15 Ever since man first took to the air, combat aircraft have been at the cutting edge of aviation technology, resulting in some of the greatest and most complex designs ever built. The World's Greatest Military Aircraft features 52 of the most important military aircraft of the last hundred years, including everything from biplane fighters and carrier aircraft to tactical bombers, transport aircraft, multirole fighters, strategic strike aircraft, and stealth

bombers. Each entry includes a brief description of the model's development and history, a profile view, key features, and specifications. Packed with more than 200 artworks and photographs, this is a colorful guide for the military aviation enthusiast.

The "C" Planes Bill Holder, William G. Holder, Scott Vadnais, 1996 During the American Civil War, General Nathan Bedford Forrest stated that in order to win a battle, you had to get there the firstest with the mostest. Today in military parlance the C designation means only one thing-getting there first with the most! Cargo aircraft are the backbone of today's military operations. From Operation Vittles to Operation Desert Storm, without the C planes the battles would have been lost. This new book is the definitive history of every cargo aircraft that displayed the American flag, from the commercial Douglas C-1 built in 1925, to the newest C-33 designation given to a potential commercial, off-the-shelf transport aircraft to supplement the C-17. The authors have attempted to trace the roots of each of the C aircraft. Bill Holder is also the author of McDonnell-Douglas F-15 Eagle: A Photo Chronicle (with Mike Wallace), and One-of-a-Kind Research Aircraft: A History of In-Flight Simulators, Testbeds & Prototypes (with Steve Markman)-both titles are available from Schiffer Publishing Ltd. Scott Vadnais is an Air Force public affairs officer currently assigned to the 325th Fighter Wing. He spent four years at Wright-Patterson AFB working with aircraft acquisitions and testing programs including the C-17.

C-5A Galaxy Systems Engineering Case Study - History and Technical Details of the Air Force's Behemoth C-5 Cargo Aircraft U. S. Military, Department of Defense (DoD), Air Force Center for Systems Engineering, Air Force Institute of Technology, World Spaceflight News, U. S. Air Force (USAF), 2017-05-05
This is one of a series of systems engineering case studies prepared by the Air Force Center for Systems Engineering. This case study analyzes the C-5 cargo airplane. The success of the C-5 transport aircraft is underscored by the performance of the fleet as an operational system and its heavy lift support in all of our conflicts from Vietnam to Iraq. It still accomplishes tasks that no other military aircraft, such as the new C-17 or any derivative of commercial cargo aircraft, can perform, and has consistently carried more cargo than any other aircraft in the time of war. With a towering six-story T tail and a unique knight's visor

forward-loading door, this gigantic aircraft is capable of carrying two of the heaviest Army tanks and their related equipment, or three CH 47 Chinook helicopters. The front and aft ramps facilitate easy drive-on, drive-off loading of military vehicles and equipment. The aircraft is capable of carrying heavy, outsized cargo in a cargo bay that measures 19.5 feet wide by 13.5 feet high by 120 feet long. The study provides a wealth of technical information about the aircraft and its complex history. The Department of Defense is exponentially increasing the acquisition of joint complex systems that deliver needed capabilities demanded by our warfighter. Systems engineering is the technical and technical management process that focuses explicitly on delivering and sustaining robust, high-quality, affordable solutions. The Air Force leadership has collectively stated the need to mature a sound systems engineering process throughout the Air Force. Gaining an understanding of the past and distilling learning principles that are then shared with others through our formal education and practitioner support are critical to achieving continuous improvement. These cases support academic instruction on SE within military service academies, civilian and military graduate schools, industry continuing education programs, and those practicing SE in the field. Each of the case studies is comprised of elements of success as well as examples of SE decisions that, in hindsight, were not optimal. Both types of examples are useful for learning. Along with discovering historical facts, we have conducted key interviews with program managers and chief engineers, both within the government and those working for the various prime and subcontractors. From this information, we have concluded that the discipline needed to implement SE and the political and acquisition environment surrounding programs continue to challenge our ability to provide balanced technical solutions.
