Tropical Agriculture in Transition – Opportunities for Mitigating Greenhouse Gas Emissions? Reiner Wassmann,Paul L.G.

Vlek,2013-04-17 Production from tropical agricultural systems will need to increase to satisfy the rising food demand of an increasing population coupled with changes in consumption patterns. At the same time, the agricultural sector is a significant source of greenhouse gases (GHG) in many developing countries, which can be attributed mainly to land-use change and methane emissions from rice and livestock. But how can we reconcile less GHG emissions from tropical agricultural systems while increasing productivity? Due to the interactive nature of these issues, this book is compiled of articles on natural resource management, as well as the socio-economic aspects of GHG mitigation. The scope of mitigation options in tropical agriculture is discussed for three different activities: (a) agroforestry; (b) rice-based production systems; (c) pasture/animal husbandry. Agronomic solutions alone will not be sufficient, as the institutional and economic frameworks within which farmers operate dictate whether a recommended agronomic management practice is acceptable. The prevention of deforestation, and the re-forestation of degraded land, could become key elements to national climate protection programs of some developing countries. Alternative management practices in rice-based and pasture systems may offer win-win options to

reduce emissions and improve resource-use efficiencies.

Handbook of Organopalladium Chemistry for Organic Synthesis Ei-ichi Negishi, Armin de Meijere, 2003-11-24 Organized to provide maximum utility to the bench synthetic chemist. The Oxford Handbook of Small Superconductors A. V. Narlikar, 2017-03-09 This handbook is about a remarkable set of materials that are technically referred to as mesoscopic superconductors, which for all practical purposes are tiny or small in their dimensions, ranging from a few micrometers down to a nanometer. At this level of smallness, the superconducting properties are dramatically changed, showing the dominance of quantum effects. Ground breaking research studies of small superconductors have emerged, and in a world obsessed with miniaturization of electronic device technology, small superconductors acquire even greater relevance and timeliness for the development of exciting novel quantum devices. The chapters, contributed by noted researchers and frontrunners in the field from 15 countries, are presented in three parts, namely progress in

basic studies, materials specific research, and advances in nanodevices. The contents of the handbook should be of immediate interest to advanced level university students and researchers particularly in physics, materials science, nanoscience and engineering departments. Various reviews and overviews appearing in the book should answer the queries and curiosities of non-specialists interested in nanoscale superconductivity. At the start, the book carries an extended introduction for readers new to the field. The book should also appeal to scientists and engineers from electronic industries interested in knowing the current status of the theory, manufacture, and future of mesoscopic superconductors. In doing so, this volume offers the opportunity to engage with cutting edge research in one of the most exciting fields of physics today and tomorrow.

Techniques in Extracorporeal Circulation 4E Philip

Kay, Christopher M Munsch, 2004-04-30 Extracorporeal circulation has become firmly established as an invaluable and routine adjunct to cardiac and vascular surgery. Since its introduction in 1953, the technique has evolved rapidly with advancing technology leading to improvements in and simplification of the equipment involved. Developments in the understanding and application of basic

science have also had a huge impact as our understanding of the complex anatomy, biochemistry, pharmacology and pathophysiology of the heart continues to grow. It is these advances in both technology and science that form the basis of this fourth edition of Techniques in Extracorporeal Circulation. The book continues to provide a comprehensive overview of the field, covering both established techniques for those new to the field of extracorporeal circulation, and current and future developments. It attempts to answer some of the innumerable practical problems associated with the routine use of artificial circulation and oxygenation, and hopes to stimulate thought and debate among its readers regarding more complex or controversial issues. Topics new to the fourth edition include robotic surgery and off-pump surgery, while other chapters have been thoroughly revised and updated to take into account developments and changes in the field. With its multidisciplinary approach, the book will remain an essential reference for all health care professionals working in the cardiac surgical operating room, in particular cardiothoracic surgeons, anaesthetists and perfusionists.

Psychology and Pathophysiological Outcomes of Eating

Akikazu Takada, Hubertus Himmerich, 2021-12-01 The psychology of eating is regulated by neural mechanisms. When not well controlled, eating may result in disorders and health hazards such as obesity, type 2 diabetes mellitus, and vascular diseases. Lifestyles and cultures influence eating habits, thus there are differences in the prevalence of health problems depending upon living environments. This book examines the psychology and the pathophysiological outcomes of eating. Chapters address such topics as the influence of lifestyle, circadian rhythm, sleep, and fragrant odors on appetite and weight regulation; the impact of glucose, sucrose, lactate, and ketone bodies on the brain; the consequences of glycation stress on the skeletal muscle; and much more.

Lignin Biodegradation: Microbiology, Chemistry, and Potential Applications T.Kent. Kirk, 2019-07-23 Lignin is a generic name for the complex aromatic polymers that are major components of vascular plant tissues. Lignin is abundant; in terms of weight it is probably second only to cellulose among renewable organic materials, and in terms of energy content it might well be the single most abundant. an international seminar on lignin biodegradation

was organized and was held May 9 to 11, 1978, at the U.S. Forest Products Laboratory in Madison, Wisconsin. This book records the proceedings of that seminar and is meant to provide a summary of research. Each speaker/author was asked to summarize his research, including his latest unpublished results, and to describe how his work fits into the overall picture. Following two orientation chapters, one a review of lignin structure and morphological distribution in plant cell walls, and the second a review of the microbial catabolism of relevant aromatics, the book is comprised of chapters in the three subject areas given by the book's title. It does, as intended, provide comprehensive coverage of research to date (August 1978).
