A Bird on the Wing Linda Evodia Hult,2009-07-25 The orders always came to her in their usual way, "Here is the target, extinguish it, you have forty eight hours to reply". Sounded like a cheap imitation of a cheesy spy movie to her, but then again why change things when they work so well.

The Technology Acceptance Model (r-TAM) for Mobile Commerce. A Revision and Empirical Evaluation Rangappa Yaraddi,2018-11-02 Research Paper (postgraduate) from the year 2018 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1, course: MBA, language: English, abstract: This paper is concerned with the acceptance of mobile commerce in Karnataka, India. User acceptance in different fields is conventionally approached through the technology acceptance model. This paper suggests a revised version of this model based on six major constructs. In order to evaluate the model, a study was performed with the aim of testing the acceptance of e-commerce in Karnataka. The participants of the study are mobile commerce users of the north Karnataka region, who have used their mobile at least once for the purpose of online shopping, online banking or any other online services. The data was collected with the help of a well-designed, pre-administered questionnaire.

11th IEEE International Conference on Engineering of Complex Computer Systems, 2006 , Annotation, With the ever expanding range of computing platforms and applications, system complexity is on the rise. Increasing intelligence and autonomies in today's systems requires innovative approaches to address these concomitant complexity issues. At this cross-section of volume and complexity, current technologies are often ineffective at coping with the demands for quality computer systems. To cope with these and other complexity issues, computer systems are modeled or specified using multi-paradigm approaches often requiring instruments and tools to visualize and understand. Advancements in formal modeling, instrumentation, and information visualization are providing traction on this important area. Whether traditional, formal models or more innovative approaches are employed; these solutions are at the frontier of systems and software engineering. The goal of this conference is to assemble industrial, academic and government experts, from a variety of user domains and software disciplines, to examine key complexity problems and effective solutions. ICECCS 2006 covers wide scope of interests including long-term research, near-term complex system requirements and promising tools, existing systems, and commercially available tools

Healthcare of the Future T. Bürkle,M. Lehmann,K. Denecke,2019-04-05
Imagining the healthcare of the future is an interesting exercise, and

although nobody can predict precisely what systems might operate in ten year's time, the possibilities which already exist can give us a clue as to how healthcare may be managed by 2030. This book presents papers from the conference Healthcare of the Future, held in Biel/Bienne, Switzerland, on 5 April 2019. The conference reflects some of the results of a two year multi-stakeholder Swiss research program in medical informatics. The research program, which began in 2016, saw 25 stakeholders cooperating for an integrated cross-sectoral treatment pathway with the goal of avoiding communication gaps and information loss among the different participants within the treatment process. The principal goals were to improve and accelerate healthcare processes and empower the patient to play an active and decisive role within their own care process. The project highlighted interaction between caregivers, patients and healthcare institutions based on modern information technology. Topics covered are divided into 4 sections: workflows in healthcare; how does eHealth change the care process; knowledge based IT support; and eHealth and the informed patient, and the book also includes the keynote conference speech on improving the hospital-patient relationship with digital communication. The book will be of interest to all those involved in healthcare whose aim is to improve and accelerate healthcare processes and empower patients to play a more active and decisive role in their own care.

Tide and Time Justin Cook, 2021-09-10 *Tide and Time* is a photojournalism and reporting project by Justin Cook in collaboration with Southerly Magazine and The Pulitzer Center on Crisis Reporting's Connected Coastlines Initiative? that documents the accelerating effects of climate change and erosion on North Carolina's Outer Banks. The work focuses on a tiny historic cemetery that is slowly washing into the Pamlico Sound. Through portraits, landscapes, aerial images, and interviews the work documents the locals trying to

preserve the cemetery, the eroding marsh ecosystem around it, and Jean Hooper, 85, for whom the cemetery is sacred ground, and still wants to be buried there beside her husband and grandparents even if the sea eventually takes her bones. Justin also has a possible family connection to this story: His late grandfather was from the Outer Banks and the preservationists discovered that they share a distant ancestor who was once buried there, but years ago a storm sucked her casket into the Pamlico Sound. A decades-long erosion study and other research by prominent North Carolina sea level rise scientists informs the science in this project, and my work visually illustrates this science through the slow creep of climate change in the lives of ordinary people, and translates the science into a visual and emotional language to which the average person can relate. Tide and Time investigates the psychological impacts of climate change, particularly 'solastalgia,' or a sense of homesickness and loss that some Outer Banks locals feel while still at home as climate change renders their home unfamiliar.

ICT for Health Science Research Amnon Shabo, Inge Madsen, Hans-Ulrich Prokosch, 2019 Information and Communications Technology (ICT) is used in healthcare and health science research in application domains such as clinical trials and the development of drug and medical devices, as well as in translational medicine, with the aim of improving prevention, diagnosis,

and interventions in health and care. This book presents accepted papers from the 2019 European Federation of Medical Informatics conference (EFMI STC 2019), held in Hanover, Germany, from 7 - 10 April 2019. More than 90 submissions were received, from which, after review, the Scientific Program Committee (SPC) accepted 50 full papers to be included in this volume of proceedings. In addition, 16 poster presentations were accepted. This year, ICT for Health Science Research was selected as the focus topic, and the conference also honors Prof. Peter Leo Reichertz (1930 - 1987), one of the founding fathers of ICT healthcare and an originator of the term Medical Informatics. The conference focuses on recent research & development supporting information systems in biomedical, translational and clinical research, as well as semantic interoperability across such systems for the purpose of data sharing and the analytics of cross-system integrated data. Papers are divided into 12 categories covering topics including digitization; data privacy; interoperability; data-driven decision support; mobile data capture; and ICT for clinical trials. The book will be of interest to all healthcare researchers and practitioners whose work involves the use of ICT.

Artificial Life VI Christoph Adami, 1998 Since their inception in 1987, the Artificial Life meetings have grown from small workshops to truly international conferences, reflecting the fields increasing appeal to researchers in all areas of science.

Collision-Based Computing Andrew Adamatzky, 2002-05-13 Collision-Based

Computing presents a unique overview of computation with mobile self-localized patterns in non-linear media, including computation in optical media, mathematical models of massively parallel computers, and molecular systems. It covers such diverse subjects as conservative computation in billiard ball models and its cellular-automaton analogues, implementation of computing devices in lattice gases, Conway's Game of Life and discrete excitable media, theory of particle machines, computation with solitons, logic of ballistic computing, phenomenology of computation, and self-replicating universal computers. Collision-Based Computing will be of interest to researchers working on relevant topics in Computing Science, Mathematical Physics and Engineering. It will also be useful background reading for postgraduate courses such as Optical Computing, Nature-Inspired Computing, Artificial Intelligence, Smart Engineering Systems, Complex and Adaptive Systems, Parallel Computation, Applied Mathematics and Computational Physics.

The Technology Acceptance Model (TAM). An Overview Johannes Köck, 2017-10-24
Document from the year 2014 in the subject Engineering - Communication Technology, grade: 1,3, Friedrich-Alexander University Erlangen-Nuremberg, course: Managing Information Technology, language: English, abstract: The Technology Acceptance Model (TAM) is an information systems theory. This model was developed by Fred Davis in his dissertation which was published in 1989. Since then, this model has spread to one of the most cited models in

the context of technology diffusion (Kotrík). User acceptance of technology has been a vital area of studies for two decades now. Many models do predict the diffusion of a system but the Technology Acceptance model is the only model which focuses mainly on Information Systems (Chuttur). With a growing demand for technology in the 1970's the increasing failure of adapting systems within enterprises became a new area of research. Fred Davis, a doctoral student at the MIT Sloan School of Management, proposed the Technology acceptance model in 1985. He explained that the use of a system is a response to user's motivation. User's motivation on the other hand depends on system features and capabilities. (Chuttur) [...]

Engineering Emergence Larry B. Rainey, Mo Jamshidi, 2018-09-03 This book examines the nature of emergence in context of man-made (i.e. engineered) systems, in general, and system of systems engineering applications, specifically. It investigates emergence to interrogate or explore the domain space from a modeling and simulation perspective to facilitate understanding, detection, classification, prediction, control, and visualization of the phenomenon. Written by leading international experts, the text is the first to address emergence from an engineering perspective. System engineering has a long and proud tradition of establishing the integrative view of systems. The field, however, has not always embraced and assimilated well the lessons and implications from research on complex adaptive systems. As the editors' note, there have been no texts on Engineering Emergence: Principles and

Applications. It is therefore especially useful to have this new, edited book that pulls together so many of the key elements, ranging from the theoretical to the practical, and tapping into advances in methods, tools, and ways to study system complexity. Drs. Rainey and Jamshidi are to be congratulated both for their vision of the book and their success in recruiting contributors with so much to say. Most notable, however, is that this is a book with engineering at its core. It uses modeling and simulation as the language in which to express principles and insights in ways that include tight thinking and rigor despite dealing with notably untidy and often surprising phenomena. – Paul K. Davis, RAND and Frederick S. Pardee RAND Graduate School The first chapter is an introduction and overview to the text. The book provides 12 chapters that have a theoretical foundation for this subject. Includes 7 specific example chapters of how various modeling and simulation paradigms/techniques can be used to investigate emergence in an engineering context to facilitate understanding, detection, classification, prediction, control and visualization of emergent behavior. The final chapter offers lessons learned and the proposed way-ahead for this discipline.

Downward Causation Peter Bøgh Andersen, 2000 Downward causation is found in two-level and multi-level systems with complex behaviour generated by many components interacting in a simple or complex way. The term was coined by the social psychologist and philosopher Donald T. Campbell, who asked the

question: If many small-scale interactions can create emergent large-scale patterns, can large-scale patterns re-influence the small-scale interactions that generated them? This has led to many further questions, among them: Does the cell as a system reorganise the biochemical processes inside it in a new way? Do psychosomatic illnesses exist? Can life change biochemical laws? Can mind change the body? The chapters in this comprehensive book address these questions from the viewpoints of different disciplines. Part 1 contains a classification of positions regarding 'downward causation', Part 2 covers physics, Part 3 covers biology and psychology, Part 4 covers social and communicative systems, and Part 5 covers general philosophy.

Unconventional Computing 2007 Andrew Adamatzky, L Bull, B. De Lacy Costello, 2007 Unconventional computing is the quest for groundbreaking new algorithms and computing architectures based on and inspired by the principles of information processing in physical, chemical and biological systems. The timely scientific contributions in this book include cutting-edge theoretical work on quantum and kinematic Turing machines, computational complexity of physical systems, molecular and chemical computation, processing incomplete information, physical hypercomputation, automata networks and swarms. They are nicely complemented by recent results on experimental implementations of logical and arithmetical circuits in a domino substrate, DNA computers, and self-assembly. The book supports interdisciplinary research in the field of future computing and contributes

toward developing a common interface between computer science, biology, mathematics, chemistry, electronics engineering, and physics.

Self-Organizing Systems F.Eugene Yates, 2012-12-06 Technological systems become organized by commands from outside, as when human intentions lead to the building of structures or machines. But many natural systems become structured by their own internal processes: these are the self organizing systems, and the emergence of order within them is a complex phenomenon that intrigues scientists from all disciplines. Unfortunately, complexity is ill-defined. Global explanatory constructs, such as cybernetics or general systems theory, which were intended to cope with complexity, produced instead a grandiosity that has now, mercifully, run its course and died. Most of us have become wary of proposals for an integrated, systems approach to complex matters; yet we must come to grips with complexity somehow. Now is a good time to reexamine complex systems to determine whether or not various scientific specialties can discover common principles or properties in them. If they do, then a fresh, multidisciplinary attack on the difficulties would be a valid scientific task. Believing that complexity is a proper scientific issue, and that self-organizing systems are the foremost example, R. Tomovic, Z. Damjanovic, and I arranged a conference (August 26-September 1, 1979) in Dubrovnik, Yugoslavia, to address self-organizing systems. We invited 30 participants from seven countries. Included were biologists, geologists, physicists, chemists, mathematicians, biophysicists, and control engineers.

Participants were asked not to bring manuscripts, but, rather, to present positions on an assigned topic. Any writing would be done after the conference, when the writers could benefit from their experiences there.
