Mir Hardware Heritage David S. F. Portree,1995 The heritage of the major Mir complex hardware elements is described. These elements include Soyuz-TM and Progress-M ; the Kvant, Kvant 2, and Kristall modules ; and the Mir base block. Configuration changes and major mission events of Salyut 6, Salyut 7, and Mir multiport space stations are described in detail for the period 1977-1994. A comparative chronology of U.S. and Soviet/Russian manned spaceflight is also given for that period. The 68 illustrations include comparative scale drawings of U.S. and Russian spacecraft as well as sequential drawings depicting missions and mission events.

Tumbleweed Shannon Lucid,2020-06-13 In 1996 Shannon Lucid, an American astronaut, spent six months, living and working on the Russian space station Mir Tumbleweed tells the fascinating story of preparing for this flight by living and training for a year in Star City, Russia, home of the Russian Cosmonauts. She launched on the space shuttle Discovery, February 22, 1996, to join the Russian Mir crew. The original plan was for her to spend four months on Mir, but due to shuttle technical difficulties, her stay was extended to six months. During this time, she participated in the arrival and activation of Priroda, the new module that contained the US science experiments, and then carried out the US science program. During her stay on Mir, two Russian supply vehicles, Progresses, arrived, five spacewalks were performed, a Soyuz, carrying a new Russian crew arrived and her original Russian crewmates departed. After 188 days, she returned to planet Earth on the space shuttle Atlantis.Tumbleweed provides vivid details living and working in a micro gravity environment for a long duration space flight.

Mir Hardware Heritage National Aeronautics And Administration,David S. F. Portree,2013-10 The purpose of this document is to describe concisely what is known in the West about the heritage of the major hardware elements associated with the Mir space station complex. These are: The Mir base block, launched in 1986 The modules added to the base block in 1987, 1989, and 1990 The Soyuz-TM crew transports and Progress-M supply ships, which first appeared in 1986 and 1989, respectively. This work is divided into four parts. Part 1, Soyuz, examines the Soyuz spacecraft and its derivatives, including those used in the abandoned manned lunar landing program. Part 2, Almaz, Salyut, and Mir, looks at the Almaz and Long-Duration Orbital Station (Russians acronym DOS) space stations. The major portion of Part 2 is devoted to the three DOS multiport stations, Salyut 6, Salyut 7, and Mir. Part 3, covering the Space Station Modules, describes their surprisingly convoluted heritage, with particular attention given to the Mir modules Kvant, Kvant 2, and Kristall. Part 4 is a chronology comparing U.S. and Soviet/Russian manned spaceflight developments in context. It begins with the first manned spaceflight, but attempts completeness only from 1970 to its conclusion (November 1994).

Application of Bioinformatics in Cancers Chad Brenner,2019-11-20 This collection of 25 research papers comprised of 22 original articles and 3 reviews is brought together from international leaders in bioinformatics and biostatistics. The collection highlights recent computational advances that improve the ability to analyze highly complex data sets to identify factors critical to cancer biology. Novel deep learning algorithms represent an emerging and highly valuable approach for collecting, characterizing and predicting clinical outcomes data. The collection highlights several of these approaches that are likely to become the foundation of research and clinical practice in the future. In fact, many of these technologies reveal new insights about basic cancer mechanisms by integrating data sets and structures that were previously immiscible. Accordingly, the series presented here bring forward a wide range of artificial intelligence approaches and statistical methods that can be applied to imaging and genomics data sets to identify previously unrecognized features that are critical for cancer. Our hope is that these articles will serve as a foundation for future research as the field of cancer biology transitions to integrating electronic health record, imaging, genomics and other complex datasets in order to develop new strategies that improve the overall health of individual patients.

Synthetic Peptide Vaccine Models Mesut Karahan,2021-02-28 A new generation of technological vaccines protect against many infectious diseases. This book describes synthetic peptide-based vaccine prototypes – the future of vaccination. Production of peptides becomes simple using automatic synthesizers. Peptides are weak immunogen and need adjuvants to provide an effective autoimmune response, which is why peptide antigens are conjugated with biopolymers and loaded with nanoparticles. The book illustrates the use of peptides vaccine systems and makes predictions of future development not only for infectious diseases, but also for cancers and brain diseases such as Alzheimer, Parkinson and psychiatric diseases. Key Features Summarizes current studies on technological vaccines Describes the uses of vaccines for the prevention of brain diseases Reviews the ways different polymers are used to enhance vaccine efficacy
