The Modern Weaponry of the World's Armed Forces Col. Y Udaya Chandar (Retd.), 2017-04-24 The Modern Weaponry of the World's Armed Forces is a treatise of military weaponry. It depicts about forty present-day weapon systems possessed by various nations, describing three to four weapons of each category with images, specifications, origin, development and design briefly. The weapon systems presented are almost all from the twenty-first century or the weapons presently under development. Only a very few officers in the three services know the finer distinctions between, say, cruise missile and ballistic missile, fourth generation jet fighter and fifth generation jet fighter and howitzer and a field gun. All such nuances are explained clearly. The beginning explains the 'history of military weapons' briefly and ends with information on the missile shield erected by most countries including India. The missile shield destroys the hostile incoming aircraft or missile automatically. The missile shield presented is real, exists on the ground today and not fictitious. The militaries win the war with the help of the man who stands erect in the face of the enemy fire and the weapon that is in his hands. All the students of military science must read this invaluable book about the gun in the hands of a soldier, what exactly it is and how much it matters.

Defense Policy And Strategic Development: Coordination Between Japan And Taiwan Fu-kuo Liu, Dean Karalekas, Masahiro Matsumura, 2021-08-10 Many possibilities for bilateral coordination between Taiwan and Japan exist in the face of China's rapid military development, growing international influence, and increasingly belligerent regional behavior. This volume examines several facets of such potential coordination between Japan and Taiwan, in such areas as Security Policy, Artificial Intelligence, Cybersecurity, Nuclearization, Missile Defense, and others.

Active Aeroelastic Wing Fouad Sabry, 2022-10-25 What Is Active Aeroelastic Wing The X-53 Active Aeroelastic Wing (AAW) development program is an American research project that has been completed. This project was carried out jointly by the Air Force Research Laboratory (AFRL), Boeing Phantom Works, and NASA's Dryden Flight Research Center. At NASA's Dryden Flight Research Center, the technology was flight tested on a modified McDonnell Douglas F/A-18 Hornet. Active Aeroelastic Wing Technology is a technology that blends the aerodynamics, controls, and structure of a wing in order to harness and regulate the aeroelastic twist that a wing experiences under dynamic stresses and high speeds. The use of multiple leading and trailing edge controls, such as aerodynamic tabs, enables subtle amounts of aeroelastic twist to be controlled to provide large amounts of wing control

power, while simultaneously minimizing maneuver air loads under high wing strain conditions or aerodynamic drag under low wing strain conditions. This is accomplished while maintaining a balance between the two extremes of wing strain conditions. This operation served as the very first demonstration of AAW technology on a large scale. Explaining Contemporary Asian Military Modernization Sheryn Lee, 2021-04-20 This book proposes a novel theoretical framework of interactive arming in order to explain armament dynamics in contemporary Asia. Frequently, the modernisation of contemporary naval forces in Asia is described as an arms race, with the underlying assumption being that weapons acquisitions and increases in defence expenditure are competitive and bilateral and due to conflicting purposes or mutual fears. This book argues that the concept of an arms race is an unsuitable one for explaining contemporary military modernisation in 21st-century Asia. Instead, it proposes a novel and innovative concept of interactive arming and argues that what drives conflict is political rivalry, not weapons acquisitions. Instead of perceiving arming as abnormal behaviour, the book views arming as a natural strategic behaviour of states and military modernisation as a basic requirement for a state's ability to survive. This book will be of much interest to students of Asian security, strategic studies and international relations in general.

Political Sociology of Japanese Pacifism Yukiko Nishikawa, 2018-09-20 While Japanese pacifism is usually seen as a national policy or an ideology rooted in the provision of Article 9 of the Japanese Constitution, it cannot be adequately understood without grasping Japanese social discourses on peace, war and justice. The perspective of political sociology provides a more in-depth understanding of Japanese pacifism and helps us to find the reasons for the critical changes that have occurred in Japan's policies since the mid-2000s. These changes include sending its self-defense force to Iraq and Afghanistan outside UN missions and the enactment of new security legislation in 2015. Nishikawa explores Japanese pacifism in a changing domestic and regional context, from the perspective of political sociology. Getting to grips with the social bases of politics, she examines whether Japan is likely to remain a pacifist country or retain its pacifist image in changing regional and global context. This book comprehensively examines Japanese pacifism by fully examining the social forces in action. Employing a multidisciplinary approach, the book contributes to theoretical debates on political sociology as well as Japanese and Asian studies. Japan is in an important transitional period and Japanese pacifism is being brought into question in changing national and international contexts.

The Pivot Kurt Campbell, 2016-06-07 From former assistant secretary of state Kurt M. Campbell comes the definitive analysis and explanation of the new major shift in American foreign policy, its interests and assets, to Asia. There is a quiet drama playing out in American foreign policy far from the dark contours of upheaval in the Middle East and South Asia and the hovering drone attacks of the war on terror. The United States is in the midst of a substantial and long-term national project, which is proceeding in fits and starts, to reorient its foreign policy to the East. The central tenet of this policy shift, aka the Pivot, is that the United States will need to do more with and in the Asia-Pacific hemisphere to help revitalize its own economy, to realize the full potential of the region's dramatic innovation, and to keep the peace in the world's most dynamic region where the lion's share of the history of the twenty-first century will be written. This book is about a necessary course correction for American diplomacy, commercial engagement, and military innovation during a time of unrelenting and largely unrewarding conflict. While the United States has intensified its focus on the Asia-Pacific arena relative to previous administrations, much more remains to be done. The Pivot is about that future. It explores how the United States should construct a strategy that will position it to maneuver across the East and offers a clarion call for cunning, dexterity, and ingenuity in the period ahead for American statecraft in the Asia-Pacific region.

Overthrow David Poyer, 2019-12-03 The United States and their Allied forces struggle to survive world war with China in this compelling, realistic thriller, the next in the Dan Lenson series. World War III continues in *Overthrow*, the next novel in the acclaimed series featuring Admiral Dan Lenson as the Allies converge against China, North Korea, and Iran in an explosive series of events. Admiral Lenson leads Operation Rupture, the invasion of South China, in a bid to finally end the war and restore peace. Meanwhile, Captain Cheryl Staurulakis fights to take a radical new "super ship" to sea, though its power and capability may introduce more risk than reward. In Washington, Dan's wife Blair conducts secret negotiations with a rebellious faction in Beijing, hoping to bring an end to the war, but her plans may be foiled by those who want outright revenge on China, not peace with them. In

western China, Teddy Oberg's guerrilla band grows into a major insurgency, and the former SEAL master chief embraces his new role as an Islamic resistance leader. Sergeant Hector Ramos raises the flag of freedom in Taiwan while fighting his own personal demons, and in Seattle Dan's daughter, Nan Lenson, fights to save the world from a dangerous new epidemic. But as the Allies plot an endgame to the war, the complicated dance of global warfare, on land and at sea, will finally trigger the nuclear Armageddon the entire world has feared for nearly a century.

Air Power in the Indian Ocean and the Western Pacific Howard M. Hensel, 2020-06-04 This book examines the security dynamics of the Indian Ocean and the Western Pacific, concentrating upon an analysis and evaluation of the air power capabilities of the various powers active in the two regions. The volume is designed to help improve understanding of the heritage and contemporary challenges confronting the global community in the Indian Ocean and the Western Pacific, as well as to illuminate the policies of the various powers involved in the affairs of these regions, and the military capabilities that are available in support of those policies. The 16 individual chapters examine both the traditional and the non-traditional threats that confront the various Indian Ocean and Western Pacific powers, and assess the roles played by land-based and naval, fixed-wing and rotary-wing, manned and unmanned aircraft, as well as by offensively and defensively capable ballistic and cruise missiles in addressing these challenges. In doing so, the various chapters analyze and evaluate the air power doctrine, capabilities, deployment patterns, and missions of the respective states. In addition, they assess the future issues, challenges, and responses involving air power as it, acting in concert with other military instruments, seeks to contribute to securing and promoting the interests of the state. This book will be of much interest to students of air power, strategic studies, Asian and Middle Eastern politics, and International Relations.

Wings for the Rising Sun Jürgen P. Melzer, 2021-02-01 The history of Japanese aviation offers countless stories of heroic achievements and dismal failures, passionate enthusiasm and sheer terror, brilliant ideas and fatally flawed strategies. In *Wings for the Rising Sun*, scholar and former airline pilot Jürgen Melzer connects the intense drama of flight with a global history of international cooperation, competition, and conflict. He details how Japanese strategists, diplomats, and industrialists skillfully exploited a series of major geopolitical changes to expand Japanese airpower and develop a domestic aviation industry. At the same time, the military and media orchestrated air shows, transcontinental goodwill flights, and press campaigns to stir popular interest in the national aviation project. Melzer analyzes the French, British, German, and American influence on Japan's aviation, revealing in

unprecedented detail how Japanese aeronautical experts absorbed foreign technologies at breathtaking speed. Yet they also designed and built boldly original flying machines that, in many respects, surpassed those of their mentors. Wings for the Rising Sun compellingly links Japan's aeronautical advancement with public mobilization, international relations, and the transnational flow of people and ideas, offering a fresh perspective on modern Japanese history.

Ala Aeroelástica Activa Fouad Sabry, 2022-10-28 ¿Qué es el ala aeroelástica activa? El programa de desarrollo del ala aeroelástica activa (AAW) X-53 es un proyecto de investigación estadounidense que se ha completado. Este proyecto fue realizado conjuntamente por el Laboratorio de Investigación de la Fuerza Aérea (AFRL), Boeing Phantom Works y el Centro de Investigación de Vuelo Dryden de la NASA. In-Flight Simulators and Fly-by-Wire/Light Demonstrators Peter G. Hamel, 2017-03-15 This book offers the first complete account of more than sixty years of international research on In-Flight Simulation and related development of electronic and electro-optic flight control system technologies (“Fly-by-Wire” and “Fly-by-Light”). They have provided a versatile and experimental procedure that is of particular importance for verification, optimization, and evaluation of flying qualities and flight safety of manned or unmanned aircraft systems. Extensive coverage is given in the book to both fundamental information related to flight testing and state-of-the-art advances in the design and implementation of electronic and electro-optic flight control systems, which have made In-Flight Simulation possible. Written by experts, the respective chapters clearly show the interdependence between various aeronautical disciplines and in-flight simulation methods. Taken together, they form a truly multidisciplinary book that addresses the needs of not just flight test engineers, but also other aeronautical scientists, engineers and project managers and historians as well. Students with a general interest in aeronautics as well as researchers in countries with growing aeronautical ambitions will also find the book useful. The omission of mathematical equations and in-depth theoretical discussions in favor of fresh discussions on innovative experiments, together with the inclusion of anecdotes and fascinating photos, make this book not only an enjoyable read, but also an important incentive to future research. The book, translated from the German by Ravindra Jategaonkar, is an extended and revised English edition of the book *Fliegende Simulatoren und Technologieträger*, edited by Peter Hamel and published by Appelhans in 2014.
