A History of the Small Arms made by the Sterling Armament Company James Edmiston, Peter Laidler, 2020-07-30 An in-depth history of the small arms made by the Sterling Company of Dagenham, Essex, England, from 1940 until Sterling was purchase by British Aerospace in 1989 and closed. The Lanchester and the Patchett Machine Carbines were both developed at Sterling Engineering Co Ltd during World War II. With the appearance of the earliest Patchett prototypes the military began testing them in ever more rigorous trials, wherein the Patchett kept proving its merits. This led to limited UK adoption of the MkII Patchett as the L2A1 in 1953, and the "first Sterling", the MkII, as the L2A2 in 1955. Then came Sterling's "Crown Jewel", the superb Mk4, adopted as the general-issue UK "Gun, Sub-Machine, L2A3" in September, 1955. Manufactured briefly but intensively

by ROF Fazakerley (1955-1959) and by Sterling for over 30 years, nearly 4000,000 were made. Unlike wraparound bolt designs like the UZI, the Sterling was capable of being truly silenced with standard 9mm ball ammunition (as opposed to being merely suppressed). The excellent silenced Sterling-Patchett Mk5, adopted as the UK L34A1 in 1967, is the only Sterling remaining in British Service. All prototypes, military Marks, commercial and licensed production models of the Sterling are described, including the Canadian C1 SMG and the Indian 1A Carbine. Contains notes on manufacturing methods and procedures as used at Sterling, ROF Fazakerley, Canadian Arsenals Limited and the Indian Small Arms Factory, Kanpur (Cawnpore), plus extensive notes on inter-model interchangeability, serial number ranges, quantities produced, client-country purchases of the various Sterling Marks, and accessories.

**Mitogen Activated Protein Kinases** Ana Cuenda, José M. Lizcano, José Lozano, 2017-11-29  
Mitogen-activated protein kinase (MAPK) pathways are evolutionarily conserved in all eukaryotes and allow cells to respond to changes in the physical and chemical properties of the environment and to produce an appropriate response by altering many cellular functions. MAPKs are among the most intensively studied signal transduction systems. MAPK research is a very dynamic field in which new perspectives are continuously opening to the scientific community. Importantly, many MAPK inhibitors have been developed during the last years and are currently being tested in preclinical and clinical assays for inflammatory diseases and cancer treatment. In this research topic, we have gathered 14 papers covering recent advances in different aspects of the MAPK research area that have provided valuable insight into the spatiotemporal dynamics, the regulation and functions of MAPK pathways, as well as their therapeutic potential. We hope that this Research Topic helps readers to have a better understanding of the progresses that have been made recently in the field of MAPK signalling. A

deeper understanding of these pathways will facilitate the development of innovative therapeutic approaches.

*The microbial ferrous wheel: iron cycling in terrestrial, freshwater, and marine environments*  
David Emerson, Eric Roden, Benjamin Twining, In the past 15 years, there has been steady growth in work relating to the microbial iron cycle. It is now well established that in anaerobic environments coupling of organic matter utilization to Fe reduction is a major pathway for anaerobic respiration. In iron-rich circumneutral environments that exist at oxic-anoxic boundaries, significant progress has been made in demonstrating that unique groups of microbes can grow either aerobically or anaerobically using Fe as a primary energy source. Likewise, in high iron acidic environments, progress has been made in the study of communities of microbes that oxidize iron, and in understanding the details of how certain of these organisms gain energy from Fe-oxidation. On the iron scarcity side, it is now appreciated that in large areas of the open ocean Fe is a key limiting nutrient; thus, a great deal of research is going into understanding the strategies microbial cells, principally phytoplankton, use to acquire iron, and how the iron cycle may impact other nutrient cycles. Finally, due to its abundance, iron has played an important role in the evolution of Earth's primary biogeochemical cycles through time. The aim of this Research Topic is to gather contributions from scientists working in diverse disciplines who have common interests in iron cycling at the process level, and at the organismal level, both from the perspective of Fe as an energy source, or as a limiting nutrient for primary productivity in the ocean. The range of disciplines may include: geomicrobiologists, microbial ecologists, microbial physiologists, biological oceanographers, and biogeochemists. Articles can be original research, techniques, reviews, or synthesis papers. An overarching goal is to demonstrate the environmental breadth of the iron cycle, and foster

understanding between different scientific communities who may not always be aware of one another's work.

**Nazarene Commentary** Mark Heber Miller, 2010-11-08 At my birth in Norfolk, Virginia September 24, 1938 my mother June prayed I would become a teacher or minister. Now at 72 years of age - after 45 years as a pastor, teacher and missionary - I can thank her for her prayers for they were fulfilled beyond her most hopeful dreams. I look back on 60 years of Biblical studies beginning when I first completed reading the King James Bible at the age of 12. I have been in love with the Scriptures - and reading/writing in general - and always wanted to publish a new edition of the New Testament.

**Sustainable Construction Materials and Technologies** Yoon-Moon Chun, Peter Claisse, Tarun R. Naik, Eshmaiel Ganjian, 2020-11-25 The construction materials industry is a major user of the world's resources. While enormous progress has been made towards sustainability, the scope and opportunities for improvements are significant. To further the effort for sustainable development, a conference on Sustainable Construction Materials and Technologies was held at Coventry University, Coventry, U.K., from June 11th - 13th, 2007, to highlight case studies and research on new and innovative ways of achieving sustainability of construction materials and technologies. This book presents selected, important contributions made at the conference. Over 190 papers from over 45 countries were accepted for presentation at the conference, of which approximately 100 selected papers are published in this book. The rest of the papers are published in two supplementary books. Topics covered in this book include: sustainable alternatives to natural sand, stone, and Portland cement in concrete; sustainable use of recyclable resources such as fly ash, ground municipal waste slag, pozzolan, rice-husk ash, silica fume, gypsum plasterboard (drywall), and lime in construction; sustainable mortar, concrete, bricks, blocks, and backfill; the economics and environmental impact of sustainable materials and structures; use of construction and demolition wastes, and organic materials (straw bale, hemp, etc.) in construction; sustainable use of soil, timber, and wood products;

and related sustainable construction and rehabilitation technologies.

**Nitrogen Fixation: Fundamentals and Applications** Igor A. Tikhonovich,Nikolai A. Provorov,Vassily I. Romanov,William E. Newton,2012-12-06 Nitrogen fixation research is presented as a rapidly developing, synergistic area of modern science, using the methods of, and accumulating data from, many fundamental branches of biology and chemistry. These include catalytic mechanisms, protein structure and function, molecular organization of genes and the regulation of their activities, biochemistry of plants and microorganisms, the signalling and surface interactions between organisms, microbial taxonomy and evolution, formal and population genetics, and ecology. The relationships between biological nitrogen fixation research and different branches of applied biology are addressed and analyzed, such as: the monitoring of genetically engineered

microorganisms, selection of plant-associated microbes, plant breeding, increasing the protein content of crops, providing ecologically safe food production, and diminishing the chemical pollution of the environment. Immediate impacts and long-term prospects for nitrogen fixation research are presented: both fundamentals and applications.

*NATO and Warsaw Pact Tanks of the Cold War* Michael Green, 2022-06-30 Led by the USA with Western European partners, the North Atlantic Treaty Organization (NATO) was formed in 1949 to counter the Soviet threat. In response the Soviet Union assembled and dominated the Warsaw Pact in 1954. The mainstay of both alliances' groundforces were their main battle tanks (MBTs). Initially both sides relied on Second World War MBTs; in NATO's case the Sherman medium tank and its successor the M26 Pershing together with the British Centurion and the heavy Conqueror. The Soviets originally fielded the T-34-85 medium tank and the IS-2 and IS-3 heavy tank replaced by the T-10. Next came the T-54 followed by the T-55 and 155mm armed T-63 (1965). The final WP Cold War MBTs were the T-64, T-72 and T-80 all with 122mm main armament. By contrast, NATO nations increasingly deployed a range of MBTs; the widely used American Patton series (M46 through M48), British Chieftain (1963) and Challenger (1982), French AMX-13 (1950) and AMX-30. From 1963 the Bundeswehr was equipped with the homegrown Leopard 1 and 2. The US M60 series and M1 Abrams came into service from 1980. These and more MBTs and variants are covered in expert detail in this superbly illustrated book.

*Robot Operating System (ROS)* Anis Koubaa,2021-07-17 This book is the sixth volume of the successful book series on Robot Operating System: The Complete Reference. The objective of the

book is to provide the reader with comprehensive coverage of the Robot Operating Systems (ROS) and the latest trends and contributed systems. ROS is currently considered as the primary development framework for robotics applications. There are seven chapters organized into three parts. Part I presents two chapters on the emerging ROS 2.0 framework; in particular, ROS 2.0 is becoming increasingly mature to be integrated into the industry. The first chapter from Amazon AWS deals with the challenges that ROS 2 developers will face as they transition their system to be commercial-grade. The second chapter deals with reactive programming for both ROS1 and ROS. In Part II, two chapters deal with advanced robotics, namely on the usage of robots in farms, and the second deals with platooning systems. Part III provides three chapters on ROS navigation. The first chapter deals with the use of deep learning for ROS navigation. The second chapter presents a detailed tuning guide on ROS navigation and the last chapter discusses SLAM for ROS applications. I believe that this book is a valuable companion for ROS users and developers to learn more ROS capabilities and features.
