A History of the Small Arms made by the Sterling Armament Company James Edmiston,Peter Laidler,2020-07-30 An in-depth history of the small arms made by the Sterling Company of Dagenham, Essex, England, from 1940 until Sterling was purchase by British Aerospace in 1989 and closed. The Lanchester and the Patchett Machine Carbines were both developed at Sterling Engineering Co Ltd during World War II. With the appearance of the earliest Patchett prototypes the military began testing them in ever more rigorous trials, wherein the Patchett kept proving its merits. This led to limited UK adoption of the MkII Patchett as the L2A1 in 1953, and the "first Sterling", the MkII, as the L2A2 in 1955. Then came Sterling's "Crown Jewel", the superb Mk4, adopted as the general-issue UK "Gun, Sub-Machine, L2A3" in September, 1955. Manufactured briefly but intensively by ROF Fazakerley (1955-1959) and by Sterling for over 30 years, nearly 4000,000 were made. Unlike wraparound bolt designs like the UZI, the Sterling was capable of being truly silenced with standard 9mm ball ammunition (as opposed to being merely "supressed"). The excellent silenced Sterling-Patchett Mk5, adopted as the UK L34A1 in 1967, is the only Sterling remaining in British Service. All prototypes, military Marks, commercial and licensed production models of the Sterling are described, including the Canadian C1 SMG and the Indian 1A Carbine. Contains notes on manufacturing methods and procedures as used at Sterling, ROF Fazakerley, Canadian Arsenal's Limited and the Indian Small Arms Factory, Kanpur (Cawnpore), plus extensive notes on inter-model interchangeability, serial number ranges, quantities produced, client-country purchases of the various Sterling Marks, and accessories.

The Enthusiasts' Guide to Buying a Classic British Sports Car Peter Hingston,2007

Inside IMSA's Legendary GTP Race Cars J. A. Martin, Michael J. Fuller, Professional automobile racing has always been dominated by sanctioning bodies whose main goal was to ensure competition. That has meant seeing that cars are well matched--in body shape or chassis/engine combinations or engine size. But what about an all-out competition, in which one team's idea of the fastest race car could be pitted against another's, regardless of mechanical "parity"? This was what the International Motor Sports Association's (IMSA) Grand Touring Prototypes (GTP) race series was about. The Series ran from 1981 to 1993, and it was one of the most exhilarating racing experiences of all time. This book is the first to profile the amazing machines that resulted from the GTP's flat-out competition among different--and passionate--ideas about what might be the fastest way around a track: the V-12 with its better ground-effect tunnels but higher center of gravity (CG); the flat six with its low CG but severely-restricted ground-effect tunnels; and others that employed elaborate wings and air dams. Here are the people behind this engineering free-for-all, the culmination of almost a century of automobile racing experience. And here are eighteen of the most competitive vehicles they designed. Using photography, diagrams, drawings and first-person accounts from the men who built them, Inside IMSA's Legendary GTP Race Cars offers a detailed look at the technology that drove some of the world's most exciting race cars, the likes of which may never be seen again.

Spectroscopy of Light and Heavy Quarks Ugo Gastaldi,Robert Klapisch,F.E. Close,2012-12-06 The second course of the International School on Physics with Low Energy Antiprotons was held in Erice, Sicily at the Ettore Majorana Centre for Scientific Culture, from May 20 to May 31, 1987. The School is dedicated to physics accessible to experiments using low energy antiprotons, especially in view of operation of the LEAR facility at CERN with the upgraded antiproton source AAC (Antiproton Accumulator AA and Antiproton Collector ACOL). The first course in 1986 covered topics related to fundamental symmetries. This book contains the proceedings of the second course which focused on spectroscopy of light and heavy quarks. These proceedings contain both the tutorial lectures and contri butions presented by participants during the School. The papers are organized in four sections: The first section includes theoretical reviews. Section II contains experimental reviews and covers the results in meson spectroscopy from DM2, MARK III, GAMS and n-WA76. Section III presents the new meson spectroscopy experiments in pre paration at CERN and Fermilab: Crystal Barrel, OBELIX, Jetset and E760. Section IV is dedicated to LEAR and to future facilities where meson spectroscopy would be a principal component of the physics programme. We should like to thank Dr. Alberto Gabriele and the staff of the Ettore Majorana Centre who provided for a smooth running of the School and a very pleasant stay. We are particularly grateful to Mrs. Anne Marie Bugge for her crucial help during the preparation and running of the School and for the editing of these Proceedings.

Cobra Trevor Legate,2006 This book tells the complex saga of a sports car that was created in the early 1960s as a result of an unlikely collaboration between a plain-talking ex-racing driver from Texas and a conservative British automobile manufacturer, funded by one of the giants of the industry, the Ford Motor Company. Carroll Shelby, AC Cars, and Ford came together to create a car called the Cobra, based on the AC Ace roadster that had been in production since 1954. When the Shelby Cobra was created, it was far from state-of-the-art, but the use of a new series of Ford V8 engines saw the lightweight car annihilate the Chevrolet Corvette in American sports car racing. By adding aerodynamic bodywork, the Daytona Cobra Coupe arrived in Europe to contest the FIA World Championship and took victory in the GT category in 1965, making Shelby American the first (and only) USA-based manufacturer to achieve this feat. In order to capitalize on this success, even greater power was required and the car was developed to take a huge 7-liter engine that proved to be a triumph of horsepower over handling - thus the 427 Cobra became an overnight legend, establishing new performance records and creating a reputation for being more than a little tricky to drive. The era of the Cobra was brief - production ended at Shelby American during 1966 and at AC Cars in 1968 where they built their own final version, the AC289 Sports. Just over 1000 Cobras were built during that time but the final cars proved difficult to sell, their vintage qualities deterring potential owners. Carroll Shelby closed his company and went to Africa while AC developed other models, but the Cobra was not quite finished yet. Within a matter of a few years, a new market for the car was created as the demand for affordable kit cars grew. The most popular model by far was the Cobra and many thousands were built, with the result that both AC Cars and Carroll Shelby put their own versions back into production. And then the arguments really started... If it was an improbable car over forty years ago, it is even more implausible today, but the remarkable Cobra, in one form or another, is still with us. It may be dead, but it just won't lie down!

The F-Frame Moultons Tony Hadland,2014 My intention in the creation of the Moulton bicycle was to take the evolution of that most remarkable device a stage beyond its classical form. In other words to produce a bicycle which was more pleasing to have and to use....One of the most pleasing consequences of the Moulton bicycle epic so far has been the spontaneous growth of the Moulton Users' groups: and to meet and to ride with them gives me special pleasure. -- Dr. Alex Moulton *** The purpose of this book is twofold. It introduces the Moulton bicycle to the many people - cyclists and non-cyclists alike - who either know nothing of it or whose knowledge is limited by the virtual disappearance of this extraordinary machine from our roads; by the numerous myths circulating about it and by the cursory mention it receives in most cycling books. Additionally, the book offers to Moulton owners and devotees a further appreciation of the background history and capability of the bike. Safety of Reactive Chemicals and Pyrotechnics Y. Wada,N. Foster,T. Yoshida,1995-11-20 Accidents involving reactive chemicals can often be prevented, or their effects alleviated, if those handling them have a sound knowledge both of their hazardous properties and of appropriate handling methods. This book addresses this need. It opens with a definition of the key technical terms and evaluation methods for hazardous materials are outlined. Chapter 2 covers accidents involving self-reactive substances, accidents occurring during chemical reactions, and accidents involving hazardous products in the event of an earthquake. In the next three chapters, methods for evaluating fire and explosion hazards of reactive substances are covered. The test methods described include DSC test using a sealed cell, impact sensitivity tests, the ignitability test, burning tests, the pyrolytic severity test, and shock sensitivity tests. Recently, the Japanese Fire Services Law was amended, requiring hazardous materials to be evaluated and classified by appropriate tests. These test methods, described in chapter 4, are related to oxidising solids, combustible solids, spontaneous ignition substances, and water-reactive substances. The final chapter gives examples of the safety assessment of various pyrotechnics. There are few books available on this subject and none so comprehensive. Each of the methods described is practical, effective and of low cost; and many of the application results are from the author's own laboratory. The book will be invaluable to those in public and industrial safety laboratories, R & D chemical laboratories, Fire Departments, explosives manufacturers, and those responsible for the transportation of hazardous materials.
