## **Breaking the Fortress Line, 1914** Clayton

Donnell, 2013-10-17 Breaking the Fortress Line 1914 offers a fascinating new perspective on the German offensive against France and Belgium in 1914. In graphic detail it describes the intense fighting that took place around the forts and fortified cities that stood in the path of the German invasion. The ordeal began with the German assault on the mighty fortress of Lige. They took twelve days to batter their way through the 'Gateway to Belgium', losing thousands of men in repeated frontal assaults, and they had to bring up the heaviest siege artillery ever used to destroy the defences. This is the epic struggle that Clayton Donnell depicts in this compelling account of a neglected aspect of the battles that followed the outbreak of the Great War. Not only does he reconstruct the German attack on the strongpoints they encountered along the entire invasion line, but he traces the history and design of these fixed defences and analyses the massive military building programmes undertaken by the French, the Germans and the Belgians between 1871 and 1914. Thousands of huge forts, infantry strongpoints, bunkers, casemates and shelters were dug out along the French and German borders. The German Moselstellung and Steinbruchstellung were born. These massive concrete fortress systems with steel gun turrets and diesel motors to generate electricity were a completely new concept of fortress design. As war approached, France and Germany devised plans to overcome each other's powerful armies and these border defences. The French plan avoided contact with the German fortress system. But the Kaiser's army faced twelve forts at Lige, nine more at Namur, and then the strongpoints of the first and second Sarrailh de Rivieres lines. Clayton Donnell provides a gripping narrative of the violent confrontation that followed.

**Human Being @ Risk** Mark Coeckelbergh, 2013-02-15 Whereas standard approaches to risk and vulnerability presuppose a strict separation between humans and their world, this book develops an existential-phenomenological approach according to which we are always already beings-at-risk. Moreover, it is argued that in our struggle against vulnerability, we create new vulnerabilities and thereby transform ourselves as much as we transform the world. Responding to the discussion about human enhancement and information technologies, the

book then shows that this dynamic-relational approach has important implications for the evaluation of new technologies and their risks. It calls for a normative anthropology of vulnerability that does not ask which objective risks are acceptable, how we can become invulnerable, or which technologies threaten human nature, but which vulnerability transformations we want. To the extent that we can steer the growth of new technologies at all, this tragic and sometimes comic project should therefore be guided by what we want to become.

*The Signature of Power* Harold D. Lasswell,2017-07-05  
Advanced industrial societies are becoming aware of the impact of what they do to the physical and biological environment, and also what that environment does to individuals. In *The Signature of Power*, Harold D. Lasswell examines the symbolic use people make of their surroundings and the complexity of the way they interpret an altered environment. Transformed habitats can

change experiences and behaviors. All people seek to maximize their preferred events, such as power and wealth, when they use the environment be it through glass skyscrapers or Gothic estates. In all cases, physical structures give expression to the perspectives of influential individuals and groups. This volume considers the complex interplay between the material and the symbolic. Physical changes introduced for political purposes by architects, planners, and engineers are guided by the perspectives of designers. These and other interactions in human society are simultaneous acts of communication and collaboration. Regardless of whether physical resources are used to transmit messages, such interactions nevertheless have a degree of communicative impact. Physical structures may be profoundly affected by the purposes, assumptions, and identities of those people who plan or change them. Environmental design, says Lasswell, is an instrument of political power.
