Flying to the Sun Charles Woodley,2016-03-07 The end of the Second World War not only brought peace to a war-weary population but also delivered a plethora of surplus transport aircraft, crew and engineers, which could be easily and cheaply repurposed to 'lift' the mood of the British population. The dream of sun-drenched beaches in exotic places suddenly became a reality for thousands of pioneering tourists taking advantage of the air-travel revolution of the 1950s. From their humble beginnings flying holidaymakers to campsites in Corsica in war-surplus Dakota aircraft to today's flights across the globe in wide-bodied Airbuses, *Flying To The Sun* narrates the development of Britain's love-hate relationship with holiday charter airlines. Whilst many readers today will be more familiar with names like Ryanair and Easyjet than Clarksons or Dan-Air, this charming book serves as a fond reminder of those enterprising airlines and companies that ushered a new age of travel.

Airline Marketing and Management Stephen Shaw,2007 Through five previous editions *Airline Marketing and Management* by Stephen Shaw has established itself as the preferred textbook for students of the principles of marketing and their application in today's airline industry; as well as a reliable reference work for those with a professional interest in the area. Carefully revised, the sixth edition of this internationally successful book includes new material on: the impact of the Trade Cycle and the current period of high oil prices on the demand for air travel; the effect of current trends towards regulatory reform and the relaxation of Ownership and Control rules on the structure of the international airline industry; the continuing strong impact of Low Cost Carriers, and the strategic options open to so-called 'Legacy' airlines as they respond to the challenges facing them; and, the setting up of new 'Business Class Only' airlines. Why are they appearing now, and what are their long-term chances of success? An initial review of the structure of the air transport market and the industry marketing environment is followed by detailed chapters examining airline business and marketing strategies, product design and management, pricing and revenue management, current and possible future distribution channels, and selling, advertising and promotional policies. The reader will benefit from greater understanding of both marketing and airline industry jargon and from the knowledge obtained regarding the significant strategic challenges facing aviation at the present time. Written in a straightforward, easy-to-read style and combining up-to-date and relevant examples drawn from the worldwide aviation industry, this new edition will further enhance the book's reputation for providing the ideal introduction to the subject.

Ports and Inland Waterways R. E. Baxter,Celia M. Phillips,2013-10-22 *Ports and Inland Waterways* is a review of sources of statistics on ports and inland waterways in the United Kingdom and covers subjects such as foreign traffic by commodity; coastwise traffic by commodity; special traffic; scheme and non-scheme port traffic; container and roll-on traffic; contents of containers; driver accompanied and unaccompanied road goods vehicles; and restow movements. Transshipment and transit movements are also included, along with fishery traffic, passenger traffic, and shipping movements. This volume is comprised of 12 chapters and begins with an overview of ports and shipping places in the United Kingdom, with emphasis on standardization, collection, and collation of port statistics on a national basis and the creation of the National Ports Council under the Harbours Act of 1964. A brief summary of industry activity concerned and its organization is given in order to present a clear background understanding of how data are collected; what is being measured; the stage at which measurements are made; what the reporting units are; the channels through which returns are routed; and where they are processed. Statistics of customs ports and other areas of the industry are then provided, including those of manpower and finance. Proposed developments for the industry are discussed in

the last chapter. This book will be of interest to transportation officials, statisticians, economists, and social science researchers.

Air Transport Management Lucy Budd, Stephen Ison, 2016-11-10 Commercial air transport is a global multimillion dollar industry that underpins the world economy and facilitates the movement of over 3 billion passengers and 50 million tonnes of air freight worldwide each year. With a clearly structured topic-based approach, this textbook presents readers with the key issues in air transport management, including: aviation law and regulation, economics, finance, airport and airline management, environmental considerations, human resource management and marketing. The book comprises carefully selected contributions from leading aviation scholars and industry professionals worldwide. To help students in their studies the book includes case studies, examples, learning objectives, keyword definitions and 'stop and think' boxes to prompt reflection and to aid understanding. Air Transport Management provides in-depth instruction for undergraduate and postgraduate students studying aviation and business management-related degrees. It also offers support to industry practitioners seeking to expand their knowledge base.

Airline Finance Peter S. Morrell, 2021-06-09 Revised and updated in its fifth edition, this internationally renowned and respected book provides the essentials to understanding all areas of airline finance. Designed to address each of the distinct areas of financial management in an air transport industry context, it also shows how these fit together, while each chapter and topic – for example, aircraft leasing – provides a detailed resource that can also be consulted separately. Supported at each stage by practical airline examples and recent data, *Airline Finance* examines the financial trends and longer term prospects for the airline industry as a whole, contrasting the developments for the major regions and airlines together with critical discussion of key issues that affect the industry as a whole. Important techniques in financial analysis are applied to the airlines as well as their investors such as banks and other financial institutions. Thoroughly amended and updated throughout, and expanded with the addition of two new chapters, the fifth edition reflects the many developments that have affected the industry, such as the impacts of the banking and sovereign debt crises on the airline industry, signs of re-nationalisation of airlines that have emerged in Europe, and the substantial changes that have occurred in connection with rating agencies and LIBOR. New start-ups and bankruptcies are covered for the first time in a new chapter, joined by airline mergers and acquisitions (M&A), both playing a role in airline concentration. Reflecting their status as a permanent feature, fuel hedging and fuel surcharges now also have their own chapter. The medium- to long-term future in terms of further concentration and government intervention (or the lack of it) and a shift in aircraft financing towards capital markets are discussed in the final chapter. The book is written for employees of airlines, airports and their suppliers, and investment bank and other analysts. It is also popular for use by universities and in-house courses on air transport management, within both academia and industry.

The Case Study Companion Scott Andrews, 2021-05-25 The Case Study method of teaching and learning, adopted by business schools and management centres globally, provides an important function in management education, but employing it effectively can often be a challenge. This book provides practical insights, tools and approaches for both case teaching and writing, drawing on perspectives from expert practitioners around the world. This book aims to critically examine different approaches to using case studies in group-based, participant-centred learning environments, exploring good practices for case teaching and learning. It provides guidance for case writers on various approaches to structuring case data, presentational formats, and the use of technology in the construction of different types of cases. It also demonstrates the use of the case method as a tool for assessment, supporting students' own development of cases to showcase good practice in organisations. The final section of this book showcases some of the resources available, providing links and reviews of additional material that can support future case teaching and writing practice, including publication. The Case Study Companion is designed for lecturers using cases within their teaching across all management disciplines, as well as those training for Professional Development and Management Education qualifications. It will also be useful for postgraduate, MBA and Executive Education students wanting to make the most of case studies in their learning and assessments.

The Modern Law of Contract Richard Stone, 2005 The Modern Law of Contract builds on the success of the popular Principles of Contract Law. Taking account of a variety of theoretical approaches: economic, sociological and empirical, the book combines meticulous examination of authorities and commentary with a modern and contextual approach. The range of material covered, combined with an accessible style, means that this book meets the needs of all undergraduate contract courses, enabling students to gain a profound understanding of this pivotal field. It will also be useful for students studying contract law as part of another discipline.

Transnational Commercial Law Maren Heidemann, 2018-11-14 Transnational Commercial Law is a textbook that deals predominantly with substantive legal contract rules that apply across borders and are designed to govern cross-border business transactions. This is an emerging field of research, teaching and practical interest in international trade and commercial law, requiring reference to multiple areas of law, including both private and public international law, the law of specific commercial transactions and arbitration. For the first time Transnational Commercial Law combines all these relevant issues in one book, and provides a basis for further study as well as detailed, cutting edge academic analyses. It provides a compact yet accessible guide to the most important cornerstones of this evolving legal discipline. Transnational Commercial Law is aimed primarily for use on LLM courses and master's programmes in commercial law. Students are presented with the actual contractual rules in the wider context of the general legal framework, and situates it within the theoretical debate, providing a truly international perspective on transnational commercial law in a globalised world.
