Monoplanes and Biplanes, Their Design, Construction and Operation Grover Loening, 1911

Monoplanes and Biplanes; Their Design, Construction and Operation Grover Cleveland Loening, 2015-07-28 Excerpt from *Monoplanes and Biplanes; Their Design, Construction and Operation: The Application of Aerodynamic Theory With a Complete Description and Comparison of the Notable Types* In this book, therefore, the author has made it his purpose to present the subject of the aeroplane in a manner that is at once intelligible and of interest to the average man, as well as of value to the more learned student. Much of the work involved in the writing of this book was done in fulfillment of the requirements for the degree of Master of Arts at Columbia University. This work, largely in the nature of research, was under the direction of Dr. Charles C. Trowbridge, of the Department of Physics, to whom the author is naturally indebted for many valuable suggestions and much friendly aid. The Monoplane as a Lifting Vortex Surface Hermann Blenk, 1947 In Prandtl's airfoil theory the monoplane was replaced by a single lifting vortex line and yielded fairly practical results. However, the theory remained restricted to the straight wing. Yawed wings and those curved in flight direction could not be computed with this first approximation; for these the chordwise lift distribution must be

taken into consideration. For the two-dimensional problem the transition from the lifting line to the lifting surface has been explained by Birnbaum. In the present report the transition to the three-dimensional problem is undertaken.

Lift and Drag Characteristics of a Cabin Monoplane Determined in Flight F. L.

Thompson, P. H. Keister, 1931 The results of flight tests conducted to determine the lift and drag characteristics of a full-scale airplane are given here. A Fairchild FC-2W2 cabin monoplane having a Gottingen 287 wing section was used for the tests.

Alexander Lippisch, 1927 The calculations in this paper afford an approximate solution of the static stability. A derivation of the formulas for moment coefficient of a wing, moment coefficient of elevator, and the total moment of the combined wing and elevator and the moment coefficient with reference to the center of gravity are provided.

King of Fighters -- Nikolay Polikarpov and His Aircraft Designs Mikhail Maslov, 2021-01-19 In the century-long history of the conquest of the sky there have been a number of outstanding personalities. Among them is the name of designer Nikolay Polikarpov (1892-1944), which is inseparably associated with the best achievements of the Russian and Soviet aviation. His practical activity in the aircraft industry began upon graduation from the Petersburg Polytechnic Institute in 1916. Aged 25, Polikarpov was sent to the Russo-Baltic Wagon Factory (RBWF), where the four-

engined Ilya Muromets bombers designed by Igor Sikorsky were being built at that time. Later, beginning from August 1918, he worked in Moscow at the Dux aircraft factory. For several years, he was engaged in improving products manufactured by the factory, and upgrading production aircraft to accommodate the available engines, equipment and materials. From 1922, Polikarpov focused his attention on fighter aircraft, creation of which was a priority for him during the following years. The first of them was the IL-400 monoplane, designated I-1 by the Air Force. The monoplane was followed by biplanes including the 2I-N1 (1925), the I-3 (1927), the D-2 (1928), and the I-6 (1929). It was specialization in fighter aircraft which, from then on, became his mission in life. At the peak of his career as a designer, Polikarpov was informally styled 'the King of Fighters', which was quite in line with the level of his merits and achievements. In the 1930's, the TsKB-3 (I-15) and TsKB-12 (I-16) fighters were designed under Polikarpov's supervision. These aircraft were the designer's undoubtable success. They also were the main combat fighters in service with the Red Army Air Force. For the creation of the I-15 and the I-16 fighters, Polikarpov was awarded the Order of Lenin in 1935, and the Order of the Red Star a year later. In the 1930's, Nikolay Polikarpov devised a lot of aircraft of various designs, the majority of which can be described as 'advanced' and 'innovative'. In 1940, Polikarpov was granted the degree of the Doctor of Engineering and the title of the Chief Designer of the highest category. In the same year, he was awarded the title of the Hero of Socialist Labor. A year later, he became a recipient of the Stalin Prize. The gifted Soviet engineer was destined to live only 52 years. On 30 July 1944, Nikolay Polikarpov died of a rapidly evolving oncological disease. To venerate his memory, the U-2 trainer has ever since been designated the Po-2 (Polikarpov-2). The book which is presented to the reader describes all Polikarpov's original projects, both those put into reality and unimplemented ones. It took the author many years to

prepare for the creation of the book. The author studied materials on the respective topics in all Russian archives, and made use of remembrances of Polikarpov's contemporaries and publications by other researchers. For purposes of clarity and in order to facilitate publication, the author split the book on Nikolai Polikarpov's aircraft into two parts - the 'Biplane Era' and the 'Monoplane Era'. Indeed, during the designer's activity from 1918 through to 1932, he devoted himself predominantly to creating biplanes. For the 1920's, the biplanes were a preferable option; they were more common, more reliable, better studied, and even more desirable for the Red Army Air Force. The first design of the IL-400 (I-1) monoplane fighter appeared as early as 1923; however, it was through its novelty and unpredictability that the aircraft failed to achieve the deserved success. It should be noted that the U-2 (Po-2) and the R-5 biplanes, which were created during that period, became one of the best Polikarpov aircraft, and brought him recognition as a reputed designer. In the 1930's, Nikolai Polikarpov's activity reached its pinnacle. It was during that period that he created his advanced monoplanes such as the I-16, the I-17, the VIT-2, and others. He continued his fruitful and quite successful activity in the area of creating modern aircraft during the war of 1941--45 as well.

Spirit of St Louis Owners' Workshop Manual Leo Marriott,2018-11-13 The Haynes Spirit of St Louis Owners' Workshop Manual covers the amazing personal story of Charles A. Lindbergh and his epic transatlantic flight in 1927; the design and construction of the original Ryan Monoplane Spirit of St Louis, including full technical details of its airframe and engine; the story of building the replica Spirit of St Louis by SOS2, supported with plenty of photographs to illustrate the achievement; a personal account of crossing the Atlantic in the replica Spirit of St Louis 85 years on; and flying and maintaining Spirit of St Louis.

Spin Tests of Two Models of a Low-wing Monoplane to Investigate Scale Effect in the Model Test Range Charles J. Donlan,1941 Concurrent tests were performed on a 1/16- and a 1/20-scale model of a modern low-wing monoplane in the NACA 15-foot free-spinning wind tunnel. Results are presented in the form of charts that afford a direct comparison between the spins of the two models for a number of different conditions.

A Study of the Pitching Moments and the Stability Characteristics of Monoplanes

George J. Higgins,1934 This note presents a study of the pitching moments and the stability characteristics of monoplanes. Expressions for the pitching-moment coefficient and the Diehl stability coefficient for the monoplane are developed, suitable for the use of airplane designers. The effective difference between the high-wing and low-wing types is portrayed and discussed. Comparisons between experimental and computed values are made. Charts for use in the solution of numerical values of the pitching-moment and stability coefficients are presented.

Those Magnificent First Flying Machines Charles B. Hayward,2015-07-08 This could be the

most amazing book you'll ever read on early flight-a real trip back in time. Written by the aviation authorities of the day...Chanute, Lockheed, Maxim, Moedebeck, and many others present the true picture of aviation in its infancy. It features over 200 amazing photographs, 3-view drawings, detail drawings, and tables...from 1906 to 1911. You'll learn exactly how early aeroplanes were built and how they flew. Vivid descriptions of performance and handling, and the truth about their engines, will make you feel like you're at the controls! The aeroplanes of Antionette, Bleriot, Cody, Curtiss, Farman, Roe, Santos-Dumont, Voisin, the Wright Brothers and many more come alive on these pages. There's even a couple of chapters on building and flying a Bleriot and a Curtiss, a section on gliders, and how to build and fly model airplanes. It's truly amazing what had been accomplished by 1912-when every flight was an adventure. Flying was the miracle of the ages and its intrepid birdmen were the heroes and idols of the day. A better understanding of early aircraft and engines will give you a deeper appreciation of just how far we've come since flight's humble beginnings. During the first decade of the 20th Century mankind finally got off the ground. Those brave early designers and flyers discovered that the sky was not the limit-it was the gateway! They paved the way to the airplanes and the flying we enjoy today. If you love aviation and history, you'll love this book!
