*Honour-Based Violence* Nazand Begikhani, Aisha K. Gill, 2016-03-09 'Honour'-based violence is a form of intimate violence committed against women (and some men) by husbands, fathers, brothers and male relatives. A very common social phenomenon, it has existed throughout history and in a wide variety of societies across the world, from white European to African cultures, from South and East Asia to Latin America. The most extreme form of Honour-based violence - 'honour' killing - tragically remains widespread. Over the last decade, national and international efforts, including new policy development and activist campaigns, have begun to challenge the practice. Based on a pioneering and unique study, conducted collaboratively by the Centre for Gender and Violence Research, University of Bristol, the University of Roehampton and Kurdish Women's Rights Watch, this book is at the forefront of this new and challenging policy direction.

**Environmental Biotechnology: For Sustainable Future** Ranbir Chander Sobti, Naveen Kumar Arora, Richa Kothari, 2018-12-06 Environmental sustainability is one of the biggest issues faced by the mankind. Rapid & rampant industrialization has put great pressure on the natural resources. To make our planet a sustainable ecosystem, habitable for future generations & provide equal opportunity for all the living creatures we not only need to make corrections but also remediate the polluted natural resources. The low-input biotechnological techniques involving microbes and plants can provide the solution for resurrecting the ecosystems. Bioremediation and biodegradation can be used to improve the conditions of polluted soil and water bodies. Green energy involving biofuels have to replace the fossil fuels to combat pollution & global warming. Biological alternatives (bioinoculants) have to replace harmful chemicals for maintaining sustainability of agro-ecosystems. The book will cover the latest developments in environmental biotech so as to use in clearing and maintaining the ecosystems for sustainable future.

**Chemical Sensors** Robert W. Cattrall, 1997 Increasing concern about pollution, our health, and our safety has increased our tendency to monitor all aspects of our environment. In the future portable sensing systems will be available to monitor almost everything of interest to us. The heart of these sensing systems will be chemical sensors - devices which detect and measure very small amounts of chemicals. Assuming no prior knowledge of chemistry, this book explains in a clear and concise manner how these devices work.

*Physics for Anesthesiologists* Antonio Pisano, 2017-08-10 This book discusses, explains and provides detailed, up-to-date information on physics applied to clinical practice in anesthesiology, with the aid of simple examples from daily life. Almost everything that happens around us, including in the operating room and intensive care units, can be explained by physical laws. An awareness and understanding of relatively simple laws such as Bernoulli's theorem, Hagen-Poiseuille equation and Pascal's principle, to name just a few, offer anesthesiologists and intensivists fascinating insights into why they do what they do. Each of the 16 chapters starts with an everyday phenomenon, explains it with a physical law, and then shows why that law is important in anesthesia practice. Numerous illustrations are included for extra clarity. It is intended for anesthesiologists, intensivists, anesthesia teachers, anesthesia trainees, and medical students.

The second part of the book deals with extraction and sampling technologies (totaling 15 chapters), providing theoretical and practical hints for the users on how to perform specific extractions. Subsequent chapters overview seven major representative matrices and the sample preparation involved in their characterization. This portion of the book is heavily based on the preceding chapters dealing with extraction technologies. The last ten chapters are dedicated to sample preparation for trace element speciation. - First title to provide comprehensive sample preparation information, dealing specifically with the analysis of samples for trace elements. - The 39 chapters are authored by international leaders of their fields.
