Three's Company Jack T C Long,2005-03-30 No 3 Squadron was formed at Larkhill in 1912 from the No 2 (Aeroplane) Company under the command of the famous Major Robert Brooke-Popham. More importantly the squadron was the first in the RFC to be equipped with fixed-wing aircraft. Thereafter the squadron distinguished itself in both World Wars, its battle honors including Mons, Neuve Chappelle, Loos, Somme 1916, Cambrai 1917, Somme 1918, The Battle of Britain, Normandy and Arnhem. More recently it has seen service in the Falklands, the Balkans, Iraq, and has just returned from Afghanistan. No 3 Squadron have recently been nominated to operate the Eurofighter Typhoon. This book is a highly-illustrated history of the Squadron's operations throughout its history. The rare photographs have been collected by the author over many years and the text includes firsthand accounts from the Squadron archives. This book is the ultimate record of one of the world's oldest and proudest military flying units.

German Fighter Aircraft in World War I Mark C. Wilkins,2019-11-19 This fully illustrated volume explores German military aviation during WWI through archival photographs and authentically detailed replicas. Fighter aircraft were developed during World War I at an unprecedented rate, as nascent air forces sought to achieve and maintain air supremacy. German manufacturers innovated at top speed, while constantly scrutinizing the development of new enemy aircraft. The Germans also utilized the concept of modular engineering, which allowed them to disassemble or reassemble their aircraft quickly in the field. The pinnacle of their aeronautical innovations was the iconic Fokker D VII—the only aircraft specifically mentioned in the Treaty of Versailles, which forbade Germany from building it after the war. German Fighter Aircraft in World War I explores how German fighter aircraft were developed during the war, the advancements and trials that made the Fokker D VII possible, and the different makes and types of aircraft. Using unpublished images including photographs of surviving aircraft, archive images, and models and replicas, this volume shows details of aircraft that were kept top secret during the war. Extensively illustrated with 140 photos and ten color profiles, this is will be essential reading for all WWI aviation enthusiasts and modelers.

Military Aircraft, Origins to 1918 Justin D. Murphy,2005-04-27 An expert examination of the evolution of military aviation and its profound impact on warfare—from the employment of balloons during the French Revolutionary wars to the use of aircraft in World War I. *Military Aircraft, Origins to 1918: An Illustrated History of Their Impact* is a detailed, authoritative exploration of the role and development of military aviation, from its beginnings to the conclusion of World War I. Military history scholar Justin Murphy carefully illustrates the impact of aircraft on military warfare, examines the different types of aircraft, and includes a wealth of photographs and descriptions. Organized thematically, the work covers everything from the origins of military aviation and the impact of aircraft on World War I to the role of reconnaissance missions, auxiliary aircraft, fighters, and bombers. Each chapter highlights key individuals, advancements in aviation technology, industrial organization and aircraft production, and the influence of aircraft on military tactics and strategy. Murphy also demonstrates how aircraft contributed to the development of total war and blurred the lines that had traditionally separated combatants and noncombatants.

International Warbirds John C. Fredriksen,2001-08-01 In depth descriptions and photographs of the aircraft of 21 nations presented with a unique human dimension that goes behind the machines to the people involved. Invaluable for specialists, accessible to enthusiasts, *International Warbirds: An Illustrated Guide to World Military Aircraft, 1914–2000* puts the most legendary fighter aircraft of the 20th century developed outside the United States on vivid display. It offers 336 illustrated biographies of the most significant warplanes used in squadron service from World War I to the Balkan conflict, including numerous models from Great Britain, France, Russia, and Japan, as well as notable machines from Israel, Canada, China, India, Brazil, and other nations. Entries span the history and scope of military aircraft from bombers and fighters to transports, trainers, reconnaissance craft, sea planes, and helicopters, with each capsule history combining nuts-and-bolts technical data with the story of that model's evolution and use. Together, these portraits offer an exciting, well-researched tribute to visionary designers and builders as well as courageous pilots and crews across the globe, and tell a vivid tale of how air power became such a decisive factor in modern warfare.

Transport Design Gregory Votolato,2007-08-15 From limousines to canoes to the Apollo spacecraft, Gregory Votolato chronicles the ever-evolving design of vehicles, nautical crafts, and other objects of transportation, and in particular explores the relationship between mass transportation and the travel experience.

Letters from an Early Bird Donal MacCarron,2006-04-30 This is the story of an early pioneer aviator who took to the air just a few years after the Wright Brothers proved that man was capable of controlled powered flight. Corbett Wilson (CW) was the only son of a wealthy family and was educated at Eaton from 1896 to 1899. He was commissioned into the Dorset Regiment and served in the South African War, by the end of which he had transferred to the Royal Artillery and became a Lieutenant in 1908. CW enrolled at the Bleriot Flying School at Pau in southern France and upon gaining his wings purchased a Bleriot XI aeroplane. Later he flew from Hendon Aerodrome and from there he made the first flight across the Irish Sea. When World War I loomed CW joined the military division of the newly formed Royal Flying Corps and in August 1914 he took off from Dover for France with No. 3 Squadron. It is this point that the vividly written letters sent to his mother give an enthralling insight into the developing war and the early military use of aircraft in battle. He lasted just ten months before being shot

down by enemy flack on 15 May 1915.

Morane-Saulnier MS.406 Aces Kari Stenman, Christian-Jacques Ehrengardt, 2014-05-20 The MS.406 was an important aircraft not only because it was built in larger numbers than any other French fighter of the period, but also because it was the first modern fighter in the Armée de l'Air inventory. Although comparable to the British Hurricane and early models of the German Bf 109, it was outclassed when flown against the more powerful, and faster, Bf 109E. With little or no protection (no armour or self-sealing tanks), the MS.406 sustained heavy losses during the Battle of France. Too lightly armed, and fitted with unreliable weaponry, the French fighter struggled to down German bombers. It therefore comes as no surprise that only a dozen French pilots became fully fledged aces on the type during this period, despite the aircraft being present in significant numbers. However a score of pilots, who bagged their very first kills at the controls of the MS.406, fought on after the fall of France, flying Dewoitine D.520s, Spitfires and even Soviet Yak-3s to attain ace status against both Allied and Axis opponents.

Fighter Pilot's Handbook - Magic, Death and Glory in the Golden Age of Flight Gordon Thorburn, 2015-11-05 In the early days of flight, no one imagined the aeroplane as a weapon of war. Inevitably, the First World War proved the catalyst that was to change the face of battle for ever. But at the war's outbreak, military aircraft, most of which were slow and stable two-seat biplanes, were held to have only one useful function: reconnaissance. It was not long, however, before pilots had the idea of dropping explosives from their cockpits. Once machine guns began to be fitted to aircraft, two factors immediately became clear: reconnaissance aircraft needed to be defended, and enemy machines had to be attacked and destroyed. So was born the 'scout' (as fighter aircraft were known then), to be followed, before long, by the 'aces' who flew them. In this wide-ranging and extremely readable study of the fighter pilot's skills, training and experiences from the early days of flight, and the development of the machines they flew, the author, who has written widely on aerial warfare, takes the reader on a journey from the first flying machines in the late nineteenth century, to the development of the specialised fighter aircraft armed with one or more machine guns, and capable, by the war's end, of speeds of 140mph and more. Along the way he takes in the development of the devices that allowed a machine gun to fire through the propeller arc, the coming of aerial photography and airborne wireless, parachutes, engine design, test flying and problems of flight, including the dreaded 'spin' that killed so many pilots, and the invention of aerial tactics such as the Immelmann Turn. Here, too, are the aces, the pilots who became famous and fêted at home for their exploits, at a time when newspapers were filled with ever-lengthening casualty lists from the Western Front. Some, like Germany's Manfred von Richthofen - the 'Red Baron' - Britain's James McCudden and Eddie Rickenbacker of the USA, are still well-known today, while others like Raymond Collishaw of the Royal Naval Air Service, France's René Fonck, and Aleksandr Kazakov of the Imperial Russian Air Service are less prominent. In 1914 it was all new, this business of flying at the enemy. It is a story of creativity, of machines, experiments, turning points, ebb and flow, heroes. Starting from almost nothing, the fighting men tried out their ideas and established the principles that ultimately made aircraft the most important weapon of all.

Russian Aces of World War 1 Victor Kulikov, 2013-04-20 Although the Russian Imperial Army Air Service consisted of no more than four BAGs (Boevaya Aviatsionniy Gruppa – battle aviation groups), each controlling three or four smaller AOIs (Aviatsionniy Otryad Istrebitelei – fighter aviation detachments) equipped with a variety of aircraft types, its fighter pilots nevertheless gave a good account of themselves. Indeed, during three years of war they claimed more than 200 Austro-Hungarian and German aircraft shot down, creating 13 aces – these elite aviators accounted for around half of the victories claimed on the Eastern Front. Pilots flew a variety of fighter types, with French Nieuport scouts and SPAD VIIIs proving to be the most popular, and effective, aeroplanes to see service on this front. The exploits of these aces are detailed here, with information based on material newly sourced by the author from Russian military and private archives. Many previously unpublished photographs are used to illustrate this book, supported by full-colour profiles that reveal how striking some of the aces' fighters were in this often-forgotten theatre of World War 1.

Eyewitnesses to the Great War Ed Klekowski, Libby Klekowski, 2014-01-10 Beginning with the novelist Edith Wharton, who toured the front in her Mercedes in 1915, this book describes the wartime experiences of American idealists (and a few rogues) on the Western Front and concludes with the doughboys' experiences under General Pershing. Americans were "over there" from the war's beginning in August 1914, and because America was neutral until April 1917, they saw the war from both the French and German lines. Since most of the Americans who served, regardless of which side they were on, were in Champagne and Lorraine, this sector is the focus. Excerpts from memoirs are supplemented by descriptions of personalities, places, battles and even equipment and weapons, thus placing these generally forgotten American adventurers into the context of their times. A special set of maps based upon German Army battle maps was drawn and rare photographs supplement the text.

Airpower Over Gallipoli, 1915-1916 Sterling Michael Pavelec, 2020-10-15 *Airpower Over Gallipoli, 1915-1916*, focuses on the men and machines in the skies over the Gallipoli Peninsula, their contributions to the campaign, and the ultimate outcomes of the role of airpower in the early stages of World War I. Based on extensive archival research, Sterling Michael Pavelec recounts the exploits of the handful of aviators during the Gallipoli campaign. As the contest for the Dardanelles Straits and the Gallipoli Peninsula raged, three Allied seaplane tenders and three land-based squadrons (two UK and one French) flew and fought against two mixed German and Ottoman squadrons (one land-based, one seaplane), the elements, and the fledgling technology. The contest was marked by experimentation, bravado, and airborne carnage as the men and machines plied the air to gain a strategic advantage in the new medium. As roles developed and missions expanded, the airmen on both sides tried to gain an advantage over their enemies. The nine-month aerial contest did not determine the outcome of the Gallipoli campaign, but the bravery of the pilots and new tactics employed foreshadowed the importance of airpower in battles to come. This book tells the lost story of the aviators and machines that opened a new domain for modern joint warfare. The dashing, adventurous, and frequently insouciant air commanders were misunderstood, misused, and neglected at the time, but they played an important role in the campaign and set the stage for joint military operations into the future. Their efforts and courage paved the way for modern joint operations at the birth of airpower.

Austro-Hungarian Aces of World War 1 Chris Chant, 2012-12-20 Starting the war with only 35 aircraft, Austro-Hungarian industry went on to produce only moderate numbers of poor quality aircraft. The fliers of the Austro-Hungarian Empire operating on the Serbian and Russian fronts were fortunate at first, finding themselves faced by small numbers of aircraft yet more obsolescent than their own. Serbia fell in 1915, but when Italy declared war the Austro-Hungarians were still faced with a two-front war – a static front against Italy, and a far more fluid

one against Russia. Austro-Hungarian fighter pilots performed bravely and often very effectively under extremely difficult geographic, climatic and operational conditions.

A Century of Triumph Christopher Chant,2002 On December 17, 1903, on the windswept beaches of Kitty Hawk, North Carolina, Orville Wright piloted the world's first powered flight, in one of the most famous moments in history. Within a few short years, airplanes of various designs were lifting into the air over Europe and America. Soon, the entire world was caught up in the fevered advance of flight and airplanes, Zeppelins, autogyros and helicopters were making the world a much smaller place. To celebrate the first full century of powered flight premier aviation historian Christopher Chant and world-famous illustrator John Batchelor have joined forces to showcase an astonishing march of progress. From the early experiments of gliderman Otto Lilienthal to the moon walk of Neil Armstrong, it has indeed been A Century of Triumph. From the golden age of Zeppelins to the extreme design experiments of World War II to the fierce modernism of supersonic fighter jets, A CENTURY OF TRIUMPH demonstrates the full richness of mankind's flying craft. In addition to Batchelor's illustrations, the book features never-before-published vintage watercolour posters of pre-World War I aviation races and a treasure trove of photographs. Chant's text combines full histories of the planes themselves with biographical essays on some of the great figures of the twentieth century: the Barnstormers, Igor Sikorsky, Amelia Earhart, Chuck Yeager, and the Apollo XVII astronauts, among others. A CENTURY OF TRUMPH is a visual and factual feast for anyone who marvels at the majesty of flying.

Beyond the Wild Blue Walter J. Boyne,1998-06-15 From the most important leaders and the most courageous victories to the earliest machines of flight and the most advanced Stealth technology, this book presents a fascinating look at 50 turbulent years of Air Force history. Three 8-page photo inserts, one in color.

Tiger Check Steven A. Fino,2017-11-01 How did American fighter pilots respond to the challenges posed by increasing automation? Spurred by their commanders during the Korean War to be “tigers,” aggressive and tenacious American fighter pilots charged headlong into packs of fireball-spewing enemy MiGs, relying on their keen eyesight, piloting finesse, and steady trigger fingers to achieve victory. But by the 1980s, American fighter pilots vanquished their foes by focusing on a four-inch-square cockpit display, manipulating electromagnetic waves, and launching rocket-propelled guided missiles from miles away. In this new era of automated, long-range air combat, can fighter pilots still be considered tigers? Aimed at scholars of technology and airpower aficionados alike, Steven A. Fino’s Tiger Check offers a detailed study of air-to-air combat focusing on three of the US Air Force’s most famed aircraft: the F-86E Sabre, the F-4C Phantom II, and the F-15A Eagle. Fino argues that increasing fire control automation altered what fighter pilots actually did during air-to-air combat. Drawing on an array of sources, as well as his own decade of experience as an F-15C fighter pilot, Fino unpacks not just the technological black box of fighter fire control equipment, but also fighter pilots’ attitudes toward their profession and their evolving aircraft. He describes how pilots grappled with the new technologies, acutely aware that the very systems that promised to simplify their jobs while increasing their lethality in the air also threatened to rob them of the quintessential–albeit mythic–fighter pilot experience. Finally, Fino explains that these new systems often required new, unique skills that took time for the pilots to identify and then develop. Eschewing the typical “great machine” or “great pilot” perspectives that dominate aviation historiography, Tiger Check provides a richer perspective on humans and machines working and evolving together in the air. The book illuminates the complex interactions between human and machine that accompany advancing automation in the workplace.
