ARMS & ARMOUR of Archduke Eugen, 1927 Auction Catalog Ron Ruble, 2008-05-19 This book is a reprint of the 1927 auction catalog that sold the Arms and Armour collection of the Archduke Eugen from the armory at Fortress Hohenwerfen near Salzburg, Austria. The entire content from the armory (over 2000 individual items) was sold in 1155 auction lots on March 1, 2, 3, 4 & 5, 1927 in New York. The catalog has over 102 photographs showing 290 of the items in the sale including 10 suits of armor. Original copies of the 1927 Archduke Eugen Arms and Armour auction catalog are almost impossible to find and they are greatly desired by arms and armor collectors for its historical significance and valued reference of early weapons and armour from the 15th to 19th century. Original title of the 1927 auction catalog, sale number 2140 by The Anderson Galleries, New York, was The Great Historical collection of Arms & Armour, the entire contents of the Armoury, Fortress Hohenwerfen near Salzburg, Austria, Inherited & Augmented by H. I. & R. H. Archduke Eugen, F. M..

**Research on the Nature of Mineral-Forming
Solutions** N. P. Yermakov,2013-10-22 Research on the
Nature of Mineral-Forming Solutions is the first book on
the subject of fluid inclusions. This book contains
observational data and studies of mineral-forming solutions
done in the Soviet Union. The description and natural
classification of inclusion in minerals according to their
composition and state are discussed. Gaseous, liquefied,
and solidified inclusions that are found in minerals and
their significance are considered important in determining
the presence and availability of the mineral. For example,
any earlier or contemporaneous minerals that are found
only in their host crystals can be determined by analyzing

the presence of solid inclusions. The origin and genetic classifications of liquid and gaseous inclusions, being both abundant in hypogene ore deposits, are explained. Other less common methods in the study of inclusions, besides homogenization of inclusions by heating under the microscope, are forwarded. The authors believe that exact measurements of the homogenization temperature are possible and therefore can serve as a precise indicator in understanding the process of formation of individual crystals and hydrothermal deposits. Other studies of the All-Union Research Institute of Piezo-optical Mineral Raw Materials are also discussed. This collection of monographs will prove invaluable to mineralogists, geologists, and research-chemists studying minerals and ore deposits.
