The Spanish Gypsy by George Eliot Antonie Gerard van den Broek, 2016-06-16 In 1864, George Eliot began writing her longest poem, *The Spanish Gypsy*. This project exhausted her, and her partner took the manuscript away from her for fear it was making her ill. This work explains what Eliot read to research the poem, which parts caused her particular problems and summarises the poem's critical reception.

MRI of the Body Daniel Vanel, Michael T. McNamara, 2012-12-06 As with the introduction of x-ray computed tomography, much of the initial development of magnetic resonance applications tended to focus on the central nervous system. The development of magnetic resonance imaging applications to other organ systems such as the chest, abdomen, pelvis and extremities has lagged somewhat behind, awaiting technical improvements, and a broader user base. The past two years have seen a marked increase in imaging applications throughout the body, most notably the musculoskeletal system. It is in this regard, that *MRI of the Body* is a welcome arrival as a text which describes both basic principles of magnetic resonance imaging and surveys the current status of magnetic resonance imaging applications throughout the body. The volume is concise, focused, clinically oriented, and abundantly illustrated. In each organ system, the appropriate technical approach is discussed, the normal anatomic features are reviewed, and the range of pathologic appearances which may be encountered are described. The authors of the chapters provide a balanced overview of MR applications and describe both

present limitations and future potential of magnetic resonance imaging applications in the organ system described.

Analysis, Removal, Effects and Risk of Pharmaceuticals in the Water Cycle, 2013-11-26
Analysis, Removal, Effects and Risk of Pharmaceuticals in the Water Cycle provides an overview of the current analytical methods for trace determination of pharmaceuticals in environmental samples. The book also reviews the fate and occurrence of pharmaceuticals in the water cycle for their elimination in wastewater and drinking water treatment, focusing on the newest developments in treatment technologies, such as membrane

bioreactors and advanced oxidation processes. Pharmaceutically active substances are a class of new, so-called emerging contaminants that have raised great concern in recent years. Human and veterinary drugs are continuously being released into the environment mainly as a result of the manufacturing processes, the disposal of unused or expired products, and via excreta. The analytical methodology for the determination of trace pharmaceuticals in complex environmental matrices is still evolving, and the number of methods described in the literature has grown considerably. This volume leads the way, keeping chemistry students, toxicologists, engineers, wastewater managers and related professionals current with developments in this quickly evolving area. Covers the latest developments in trace determinations Concise and critical compilation of the recent literature Focuses on new treatment technologies

Technical Abstract Bulletin Defense Documentation Center (U.S.),1967

Surgery of the Skull Base Madjid Samii,Wolfgang Draf,2012-12-06 The region of the skull base was long considered a surgical barrier because of its complex anatomy. With few exceptions, the region immediately beyond the dura or bony skull base constituted a no man's land for the surgeon working from the other direction. A major reason for this was the high morbidity associated with operative procedures in that area using traditional dissection techniques. This situation changed with the advent of the operating microscope. Used initially by ear, nose and throat specialists for resective and reconstructive surgery of the petrous bone and paranasal sinuses, the operating microscope was later introduced in other areas, and neurosurgeons began using it in the mid-1960s. With technical equality thus established, the groundwork was laid for taking a new, systematic, and interdisciplinary approach to surgical problems of the skull base. Intensive and systematic cooperation between ear, nose and throat surgeons and neurologic surgeons had its origins in the departments of the University of Mainz kindly supported by our chairmen Prof. Dr. Dr. hc Kurt Schiirmann (Department of Neurosurgery) and Prof. Dr. W. Kley (Department of Ear, Nose and Throat Diseases, Head and Neck Surgery). The experience gained from this cooperation was taught in workshops held in Hannover from 1979 to 1986, acquiring a broader interdisciplinary base through the participation of specialists from the fields of anatomy, pathology, neuroradiology, ophthalmology, and maxillofacial surgery.

Tonkin Gulf and the Escalation of the Vietnam War, Revised Edition Edwin

Moise,2019-07-15 On July 31, the U.S. Navy destroyer USS Maddox (DD-731) began a reconnaissance cruise off the coast of North Vietnam. On August 2, three North Vietnamese torpedo boats attacked the ship. On the night of August 4, the Maddox and another destroyer, the USS Turner Joy (DD-951), expecting to be attacked, saw what they interpreted as hostile torpedo boats on their radars and reported themselves under attack. The following day, the United States bombed North Vietnam in retaliation. Congress promptly passed, almost unanimously and with little debate, a resolution granting President Lyndon Johnson authority to take "all necessary measures" to deal with aggression in Vietnam. The incident of August 4, 1964, is at the heart of this book. The author interviewed numerous Americans who were present. Most believed in the moment that an attack was occurring. By the time they were interviewed, there were more doubters than believers, but the ones who still believed were more confident in their opinions. Factoring in degree of assurance, one could say that the witnesses were split right down the middle on this fundamental question. A careful and rigorous examination of the other forms of evidence, including intercepted North Vietnamese naval communications, interrogations of North Vietnamese torpedo boat personnel captured later in the war, and the destroyers' detailed records of the location and duration of radar contacts, lead the author to conclude that no attack occurred that night.

Nature, Man and God in Medieval Islam Edwin Calverley,James Pollock,2022-08-22 A contemporary to Thomas Aquinas in Latin Catholic Italy, and with a parallel motivation to

stabilize each his own civilization in its flux and storm, 'Abd Allah Baydawi of Ilkhan Persia wrote a compact and memorable Arabic Summation of Islamic Natural and Traditional Theology. With the same strokes of his pen he presented the Islamic version of the Science of Theological Statement, bafflingly called Kalam while familiarly embracing Theology. Baydawi's Tawali'al-Anwar min Matal'al-Anzar (Rays of Dawnlight Outstreaming from Far Horizons of Logical Reasoning), with Mahmud Isfahani's commentary, is a formidably clear logical and mental vision of mankind's final completion as a spiritual structure in Islam. Reality - in nature's Possible mode, in an apodictic Divine mode, and in humanity's heroic Prophetic mode - comprises man's Worldview and is the Theme of the Baydawi/Isfahani discourse. The Edifice of Man and Humanity's evanescent Evidence within it are both hugely arresting and moving. The print edition is available as a set of two volumes (9789004121027).
