Estimating the Value of Surveillance Information Using Error Cost Matrices James M. McKendry,1967 Among the specific objectives of the INTERPRETER TECHNIQUES Task, U.S. Army Behavioral Science Research Laboratory, is the development of optimal procedures for imposing demands on the image interpreter and furnishing the interpreter with auxiliary information on the surveillance problem. Requisite to investigating procedures for stating information requirements is the determination of what the information requirements of tactical commanders are and what requirements interpreters can be expected to meet. The objective of the present study was to develop reliable estimates of the respective value and cost of correct and erroneous information so that the information requirements of commanders can be stated in standardized quantitative terms. Fifty tactical situations for which targets were to be identified, varying in such dimensions as terrain, mission, and enemy deployment, were developed. Data for development of matrices of costs associated with designated kinds of error in specific situations were provided by a sample of 389 U.S. Army Captains attending the U.S. Army Infantry School. Techniques and procedures employed in generating the cost matrices are described in detail.

ALLERGY ANALYSIS: Alternative Methods Stephen G. Perry Ph.D.,2023-05-02 I had an opportunity to establish a Lowry quantitative histochemical laboratory at the Missouri Medical School Missouri Institute of Psychiatry (MIP) in Saint Louis Missouri as an Assistant Professor. While Director of the Missouri Division of Mental Health Dr. George A. Ulett, M.D., Ph.D. established MIP to provide research into the causes of mental problems. As the neurochemistry lab director Dr. Ulett asked me to direct his allergy research program we undertook some really challenging research problems. His wife, Dr Pearl Ulett, Child Psychiatrist, was conducting food allergy and diet management studies that reversed the symptoms that got youth diagnosed with mental problems and a side benefit of loss of acne and weight gain. I coordinated a family study beginning with mine and submitted myself to a food allergy computer analyzed EEG study with spectacular findings. I also recommended a comprehensive research plan to include food allergies and various diagnosed patients versus control groups.

Between Empire and Nation Milena B. Methodieva,2021-01-12 Between Empire and Nation tells the story of the transformation of the Muslim community in modern Bulgaria during a period of imperial dissolution, conflicting national and imperial enterprises, and the emergence of new national and ethnic identities. In 1878, the Ottoman empire relinquished large territories in the Balkans, with about 600,000 Muslims remaining in the newly-established Bulgarian state. Milena B. Methodieva explores how these former Ottoman subjects, now under Bulgarian rule, navigated between empire and nation-state, and sought to claim a place in the larger modern world. Following the Russo-Ottoman war of 1877–1878, a movement for cultural reform and political mobilization gained momentum within Bulgaria's sizable Muslim population. From 1878 until the 1908 Young Turk revolution, this reform movement emerged as part of a struggle to redefine Muslim collective identity while engaging with broader intellectual and political trends of the time. Using a wide array of primary sources and drawing on both Ottoman and Eastern European historiographies, Methodieva approaches the question of Balkan Muslims' engagement with modernity through a transnational lens, arguing that the experience of this Muslim minority provides new insight into the nature of nationalism, citizenship, and state formation.

Drug Development for Parasite-induced Diarrheal Diseases Anjan Debnath,James H. McKerrow,2017-08-25 One of the top four contributors to the global burden of disease is diarrheal infections. Intestinal parasites are major

causes of morbidity and mortality associated with diarrheal diseases in both the developed and developing world. Amebiasis is responsible for 50 million cases of invasive disease and 70,000 deaths annually in the world. Giardiasis has an estimated worldwide prevalence of 280 million cases annually. In developed countries, *Giardia lamblia* infects about 2% of adults and 6-8% of children. The prevalence of *G. lamblia* infection is generally higher in developing countries, ranging from 3% to 90%. Furthermore, giardial infections contribute substantially to the 2.5 million annual deaths from diarrheal disease. In Asia, Africa, and Latin America, about 500,000 new giardiasis cases are reported each year. *Cryptosporidium* accounts for 20% and 9% of diarrheal episodes in children in developing and developed countries, respectively. Infection with *Cryptosporidium* can be chronic and especially debilitating in immunosuppressed individuals and malnourished children. A recent study to measure disease burden, based on disability-adjusted life years (DALYs), found that cryptosporidiosis and amebiasis produce about 10.6 million DALYs. This exceeds the DALYs of any helminth infection currently being targeted by the World Health Organization for preventive chemotherapy. Because of its link with poverty, *Giardia* and *Cryptosporidium* were included in the WHO Neglected Diseases Initiative in 2004. *E. histolytica*, *G. lamblia*, and *C. parvum* have been listed by the National Institutes of Health (NIH) as category B priority biodefense pathogens due to low infectious dose and potential for dissemination through compromised food and water supplies in the United States. Despite the prevalence of amebiasis, giardiasis, and cryptosporidiosis there are no vaccines or prophylactic drugs. The first-line drugs for invasive amebiasis and giardiasis chemotherapy are nitroimidazoles, with the prototype, metronidazole, being the most common drug used worldwide. Metronidazole has been shown to be both mutagenic in a microbiological system and carcinogenic to rodents, and frequently causes gastrointestinal side effects. In spite of the efficacy of nitroimidazole drugs, treatment failures in giardiasis occur in up to 20% of cases. Clinical resistance of *G. lamblia* to metronidazole is proven and cross resistance is a concern with all commonly used anti-giardial drugs. Nitazoxanide, the only FDA-approved drug for the treatment of cryptosporidiosis, is effective in the treatment of immunocompetent patients and partially effective for immunosuppressed patients. Therefore, it is critical to search for more effective drugs to treat amebiasis, giardiasis, and cryptosporidiosis. This Research Topic for Frontiers in Microbiology will explore the recent progress in drug development for parasitic diarrheal diseases. This includes an understanding of drug resistance mechanisms. We would also welcome submissions on the drug development for other diarrheal parasites. We hope that this research topic will include a comprehensive survey of various attempts by the parasitology research community to create effective drugs for these diseases.

Bioinformatics and Phylogenetics Tandy Warnow,2019-04-08 This volume presents a compelling collection of state-of-the-art work in algorithmic computational biology, honoring the legacy of Professor Bernard M.E. Moret in this field. Reflecting the wide-ranging influences of Prof. Moret's research, the coverage encompasses such areas as phylogenetic tree and network estimation, genome rearrangements, cancer phylogeny, species trees, divide-and-conquer strategies, and integer linear programming. Each self-contained chapter provides an introduction to a cutting-edge problem of particular computational and mathematical interest. Topics and features: addresses the challenges in developing accurate and efficient software for the NP-hard maximum likelihood phylogeny estimation problem; describes the inference of species trees, covering strategies to scale phylogeny estimation methods to large datasets, and the construction of taxonomic supertrees; discusses the inference of ultrametric distances from additive distance matrices, and the inference of ancestral genomes under genome rearrangement events; reviews different techniques for inferring evolutionary histories in cancer, from the use of chromosomal rearrangements to tumor phylogenetics approaches; examines problems in phylogenetic networks, including questions relating to discrete mathematics, and issues of statistical estimation; highlights how evolution can provide a framework within which to understand comparative and functional genomics; provides an introduction to Integer Linear Programming and its use in computational biology, including its use for solving the Traveling Salesman Problem. Offering an invaluable source of insights for computer scientists, applied mathematicians, and statisticians, this illuminating volume will also prove useful for graduate courses on computational biology and bioinformatics.

Seventy Years of Farm Tractors 1930-2000 Brian Bell,2020-02-20 By the end of the twentieth century there were some half-million tractors on British farms - more machines than people to drive them. Brian Bell's encyclopaedic book traces the evolution of the farm tractor from the days of starting handle and pan seat to current 4-wheel drive machines with air-conditioned cabs and computer management systems. He deals in particular with developments of the classic period from the 1950s to the 1990s. The book is arranged alphabetically by manufacturer from Allis-Chalmers to Zetor, one hundred marques in total. These are all machines to be found on British farms irrespective of their country of manufacture. Brian runs concisely through the histories of the companies and their major models, illustrated with a wealth of photographs and extracts from sales literature. He adds some special features on items such as hydraulic systems and cold-starting aids. He includes a glossary and full index. This book replaces the author's earlier, successful, Fifty Years of Farm Tractors. Many of the photographs are new and the text has been brought up to date to include developments of the early twenty-first century.

Tectonic Evolution of the Oman Mountains H.R. Rollinson,M.P. Searle,I.A. Abbasi,A. Al-Lazki,M.H. Al-Kindi,2014-04-07 The Oman Mountains contain one of the world's best- exposed and best-understood fold-thrust belts and the largest, best-exposed and most intensively studied ophiolite complex on Earth. This volume presents new international research from authors currently active in the field focusing on the geology of the Oman Mountains, the foreland region, the carbonate platforms of Northern and Central Oman and the underlying basement complex. In

addition there is a particular focus on geoconservation in the region. The volume is divided into three main sections that discuss the tectonics of the Arabian plate using insights from geophysics, petrology, structural geology, geochronology and palaeontology; the petrology and geochemistry of the Oman Ophiolite and the sedimentary and hydrocarbon systems of Oman, drawing on the geophysics, structure and sedimentology of these systems. The volume is enhanced by numerous colour images provided courtesy of Petroleum Development Oman.

Design of Remediation Systems Jimmy H Wong, Chin Lim, Greg L. Nolen, 1997-01-28 While numerous books are available on remediation systems, this is the first work to document and explain in full the design aspects of the subject. Based on sound engineering principles and practical construction considerations, this text explains the entire process of remediation design, from assessment to completion, and provides engineers with the tools they need to conduct a pilot test, apply the results, and design a practical, efficient system. Design of Remediation Systems first establishes the underlying principles behind each technology, then outlines the standard procedures for designing a system. This comprehensive manual explains feasibility and pilot tests, data evaluation, design considerations and parameters, calculations and equations, and construction aspects of the system. Also featured are discussions of the operation and maintenance of systems, and analysis of current trends, such as combining soil vapor extraction with air sparging. Detailed case study examples are included in each chapter. The book considers petroleum hydrocarbons as the primary contaminant, but the principles and procedures can be applied to a wide range of other contaminants. This hands-on text/reference presents a complete picture of remediation system design for engineers, students, and scientists. No other single work offers the thorough coverage of this critical aspect of remediation.

Gas Purification Arthur L Kohl, Richard Nielsen, 1997-08-28 This massively updated and expanded fifth edition is the most complete, authoritative engineering treatment of the dehydration and gas purification processes used in industry today. Of great value to design and operations engineers, it gives practical process and equipment design descriptions, basic data, plant performance results, and other detailed information on gas purification processes and hardware. This latest edition incorporates all significant advances in the field since 1985. You will find major new chapters on the rapidly expanding technologies of nitrogen oxide control, with discussions of regulatory requirements and available processes; absorption in physical solvents, covering single component and mixed solvent systems; and membrane permeation, with emphasis on the gas purification applications of membrane units. In addition, new sections cover areas of strong current interest, particularly liquid hydrocarbon treating, Claus plant tail gas treating, thermal oxidation of volatile organic compounds, and sulfur scavenging processes. This volume brings you expanded coverage of alkanolamines for hydrogen sulfide and carbon dioxide removal, the removal and use of ammonia in gas purification, the use of alkaline salt solutions for acid gas removal, and the use of water to absorb gas impurities. The basic technologies and all significant advances in the following areas are thoroughly described: sulfur dioxide removal and recovery processes, processes for converting hydrogen sulfide to sulfur, liquid phase oxidation processes for hydrogen sulfide removal, the absorption of water vapor by dehydrating solutions, gas dehydration and purification by adsorption, and the catalytic and thermal conversion of gas impurities.
