Light Alloys Robert John Hussey,Josephine Wilson,2013-04-17 Light Alloys Directory and Databook is a world-wide directory of the properties and suppliers of light alloys used in, or proposed for, numerous engineering applications. Alloys covered will include aluminium alloys, magnesium alloys, titanium alloys, beryllium. For the metals considered each section will consist of: a short introduction; a table comparing basic data and a series of comparison sheets. The book will adopt standardised data in order to help the reader in finding and comparing different materials and identifying the required information. All comparison sheets are cross-referenced, so that the user will be able to locate data on a specific product or compare properties easily. The book is designed to complement the existing publications on high performance materials.

Metal Matrix Composites in Industry Alexander

Evans, Christopher San Marchi, Andreas

Mortensen, 2013-11-27 Metal matrix composites are making tangible inroads into the real world of engineering. They are used in engineering components such as brake rotors, aircraft parts, combustion engines, and heat sinks for electronic systems. Yet, outside a relatively limited circle of specialists, these materials are mostly unknown. Designers do not as a rule think of using these materials, in part because access to information is difficult as these materials have not really entered engineering handbooks. *Metal Matrix Composites in Industry* is thus useful to engineers who wish to gain introductory knowledge of these materials and who want to know where to find them. Additionally, it provides researchers and academics with a survey of current industrial activity in this area of technology.
