Frigates At Sea Lynn Stone,2005-08-01 Explores The Smallest Of The Surface Combatants That Were Used In The Cold War Mainly For Escort Vessels For Groups Of Naval Ships And Battle Forces.

US Navy Frigates of the Cold War Mark Stille,2021-06-24 Though they were never the most glamorous of warships, found US Navy frigates were frequently found on the frontlines of the Cold War at sea. These warships were the descendants of World War II's destroyer escorts, designed primarily to escort convoys. They specialized in anti-submarine warfare, but were intended to be numerous, tough, versatile, and well-armed enough to show US naval power around the world, performing roles that varied from intercepting drug-smugglers to defending aircraft carriers. When the Cold War turned hot, frigates were often there. It was a US Navy frigate, Harold E. Holt, that conducted the US Navy's first hostile boarding action since 1826 during the SS Mayaguez incident. Frigates were at the forefront of operations in the Persian Gulf during the Tanker War, with the frigate USS Stark suffering a notorious Exocet attack by Iraqi warplanes, and proving the Oliver Hazard Perry-class's legendary toughness. This book explains how the technology and design of frigates changed during the Cold War, how the classes were modified to keep up to date, and explores the many varied missions they performed during the Cold War and since.

**Six Frigates** Ian W Toll,2006-10-17 In 1794, President Washington signed legislation authorizing the construction of six heavy frigates. (The frigate, smaller than a battleship and larger than a sloop, represented a unique combination of power, speed, and tactical versatility. In any navy, the frigates were sent on the most daring missions, and they fought the most dramatic single-ship

actions of the Napoleonic era.) The American frigates were to be built at six major seaports: Portsmouth, Boston, New York, Philadelphia, Baltimore, and Norfolk. Entirely new domestic industries would be created, relying heavily on the extraction of natural resources - hemp, jute, flax, ore, softwoods, and hardwoods - from the backwoods of Maine to the uninhabited coastal islands of Georgia. It was the first great appropriation of federal money and the first demonstration of the power of the new central government.--BOOK JACKET.

**THE NAVAL HISTORY OF THE UNITED STATES WILLIS J. ABBOT,1890**

The Frigates Henry Gruppe,1979 Profusely illustrated text discusses the Constitution, the Essex, and other frigates used as warships by the U.S. Navy during the 19th century, the men who sailed them, and the battles in which they participated.

**The 32-gun Frigate Essex** Portia A. Takakjian,2005 On the successful completion of the War of Independence, the American navy was disbanded, and it was not until the late 1790s that a regular naval force was reconstituted. Provoked by the need to protect American merchant shipping from the belligerent European nations and the piratical Barbary powers, Congress decided on a programme of frigate building, which included the 32-gun frigate Essex. Designed by William Hackett, Essex was a typical medium frigate of her time. Working from both US and British sources, the author has reconstructed many previously undetermined details of the ship and in passing has rehabilitated the reputation of the designer as one who was responsible for one of the best balanced of that generation's frigates.

**The 44-Gun Frigate USS Constitution** Karl Heinz Marquardt,2017-12-19 The Constitution was one of the US Navy's first six original frigates, ordered as a counter to the Barbary corsairs in the Mediterranean. Fast and heavily built, she was nominally rated as a 44 but mounted thirty 24-

pdr and twenty-two 12-pdr cannon. Her most famous encounter, after which she became nicknamed 'Old Ironsides' due to British shot being seen bouncing off her hull, involved HMS Guerriere, which she smashed; the same treatment was meted out to HMS Java four months later. Now the oldest commissioned warship afloat in the world, she is berthed in Boston Harbor. The 'Anatomy of the Ship' series aims to provide the finest documentation of individual ships and ship types ever published. What makes the series unique is a complete set of superbly executed line drawings, both the conventional type of plan as well as explanatory views, with fully descriptive keys. These are supported by technical details and a record of the ship's service history.

Marines in the Frigate Navy Charles H. Waterhouse, Charles R. Smith, Richard A.

Long, 2014-06-19 The first half of the 19th century saw little dramatic change in military technology or in military and naval tactics. Marines, formally organized by an act of Congress in 1798, would perform the same functions they had assumed during America's fight for independence. In May 1798, in response to the depredations of French privateers, President John Adams instructed American frigate captains to make reprisals upon the commerce of France. Initially, Marine units were based upon the size of the ship and appointed directly, but on 11 July 1798, an act of Congress authorized establishing and organizing a Marine Corps. American ships with Marine detachments soon set sail, landed, and captured a shore battery at Puerto Plata, Santo Domingo, and participated in the capture of more than three-score French vessels before the Treaty of Peace brought an end to the undeclared war. The renewal of the Barbary Wars in 1801 resulted in orders to the Mediterranean Squadron for many Marines, where they fought alongside sailors at ships' great guns. In 1805, near the war's end, Marine Lieutenant Presley N. O'Bannon, with six privates, and a

motley force of Arabs and Greeks, marched 500 miles across the desert from Egypt. Reaching Derna, the Marines led a charge through the town, captured its fort, and raised the flag for the first time over Old World territory. From 1806 to 1811, Marines served with small detachments scattered throughout the world on board ship, guarded naval yards, harassed the Spanish in East Florida, clashed with hostile Indians, and landed on distant shores to defend American diplomatic missions and endangered citizens. In the second war with England, first priority was given to providing Marine detachments for ships of the blue-water Navy. There were not enough Marines to do even this, let alone provide Marines for the equally critical Great Lakes squadrons. Company-sized Marine units fought heroically at Bladensburg, on the land approach to the nation's capital; at Craney Island, near Norfolk, Virginia; and at New Orleans, but apparently no thought was given to forming an amphibious force or even a permanent battalion structure. Nor, indeed, did the nature of the war offer any particularly inviting amphibious targets. During the next 20 years, the Corps, under the able leadership of Lieutenant Colonel Commandant Archibald Henderson, established its place within the American military system by showing the flag in punitive actions against pirates and hostile governments from the West Indies to Sumatra, in suppressing the illicit slave trade, on the ships and shore stations of the Navy, and in handling domestic disturbances. The small Corps repeatedly demonstrated its efficiency, discipline, and usefulness. The artist, Colonel Charles H. Waterhouse, United States Marine Corps Reserve, is a World War II veteran and noted illustrator. As a combat artist, he depicted scenes in Vietnam, Alaska, the Western Pacific, and the Atlantic which resulted in two published works. Returning to active duty in 1973, Colonel Waterhouse began work on a series of paintings of Marine Corps activities during the American Revolution, conquest of California, and the federal period, 1798 to 1835. The paintings highlighting Marine activities from

1798 to 1835 form a part of a larger project now underway which will result in the publication of a definitive history covering the period. The history is to be written by Charles R. Smith, author of *Marines in the Revolution* and a forthcoming volume dealing with Marine activities in Vietnam, with the research assistance of Richard A. Long, who also assisted in the preparation of *Marines in the Revolution*.

*River-class Frigates and the Battle of the Atlantic* Brian Lavery, 2006 An in-depth study of the River-class Frigate, its design, construction, weapons, crew and actions during the Battle of the Atlantic ... the author draws on previously unpublished ship plans, photographs, naval documents and eyewitness accounts to present a complete and exhaustive study of the River-class.--Back cover.

**The 50-gun Ship** Rif Winfield, 1997 By the end of the sailing era the 50-gun ship had become regarded as a hybrid, too small to stand in the line of battle, and lacking the speed and hardness of the frigate, so it has often been dismissed as a naval architectural dinosaur left over from an earlier age. This book aims to reveal the crucial role of the 50-gun ship in the development of both the battleship and the frigate, and explains the enduring role which ensured the survival of the type into the 19th century. Charting its origins in the pre-Commonwealth frigates, the author follows the development of the type in the 18th century and its gradual transition from battlefleet to heavy cruiser role, highlighting its revival for the special conditions of colonial warfare during the American Revolution. Thereafter they were employed as peacetime flagships for distant stations, achieving final glory leading small craft in anti-invasion operations during the Napoleonic War. The
