Nature's Prophet Michael A. Flannery, 2018-08-07 An astute study of Alfred Russel Wallace's path to natural theology. A spiritualist, libertarian socialist, women's rights advocate, and critic of Victorian social convention, Alfred Russel Wallace was in every sense a rebel who challenged the emergent scientific certainties of Victorian England by arguing for a natural world imbued with purpose and spiritual significance. *Nature's Prophet: Alfred Russel Wallace and His Evolution from Natural Selection to Natural Theology* is a critical reassessment of Wallace's path to natural theology and counters the dismissive narrative that Wallace's theistic and sociopolitical positions are not to be taken seriously in the history and philosophy of science. Author Michael A. Flannery provides a cogent and lucid account of a crucial—and often underappreciated—element of Wallace's evolutionary worldview. As co-discoverer, with Charles Darwin, of the theory of natural selection, Wallace willingly took a backseat to the well-bred, better known scientist. Whereas Darwin held fast to his first published scientific explanations for the development of life on earth, Wallace continued to modify his thinking, refining his argument toward a more controversial metaphysical view which placed him within the highly charged intersection of biology and religion. Despite considerable research into the naturalist's life and work, Wallace's own evolution from natural selection to natural theology has been largely unexplored; yet, as Flannery persuasively shows, it is readily demonstrated in his writings from 1843 until his death in 1913. *Nature's Prophet* provides a detailed investigation of Wallace's ideas, showing how, although he independently discovered the mechanism of natural selection, he at the same time came to hold a very different view of evolution from Darwin. Ultimately, Flannery shows, Wallace's reconsideration of the argument for design yields a more nuanced version of creative and purposeful theistic evolution and represents one of the most innovative contributions of its kind in

the Victorian and Edwardian eras, profoundly influencing a later generation of scientists and intellectuals.

Nature's Prophet Michael A. Flannery, 2018

The Prophet of Dry Hill David Gessner, 2005-09-07 David Gessner had always known of John Hay. A nature writing legend, Hay was a hero to the younger writer. But it wasn't until Gessner returned to his childhood home on Cape Cod that he befriended the older man. At first, Gessner thought he might write Hay's biography. But that idea gradually changed as the two talked and walked through the fifty acres surrounding Hay's house on Dry Hill. The book that resulted is a dramatic record of what the younger man learned from his elder. *The Prophet of Dry Hill* is the compelling story of two men and the year they spent together. But more than a book about friendship, it's a lyrical primer on the importance of living a life connected to the wild. John Hay has lived deeply on one piece of land for sixty years. As a consequence, he has much to tell Gessner-and us-about the importance of creating a strong relationship with the land we live on. His words speak to our forgotten need for space and for reaching beyond ourselves to the world outside. Seeing is the great discipline that nature teaches, Hay proclaims. Nature, not psychology, is the path to our true selves. In our split-second world, a life like John Hay's-rooted, connected to nature-provides a radical counterpoint to our technology-filled indoor existences. Gessner learned much from this man on the hill. We too will be challenged and changed.

George Perkins Marsh, Prophet of Conservation David Lowenthal, 2003 G.P. Marsh wrote what William Cronon calls in his foreword, one of America's three most important environmental texts, *Man and Nature* (1864) (the other two were *Silent Spring* and *Sand County Almanac*). *Man and Nature* argued that deforestation led to the demise of civilization: that because the ancients cut down their trees, there was erosion, drought alternating with floods, and climate change, the latter because moist forests no longer evaporated water into the atmosphere to cause rain and cooler temperatures. Environmental disaster then led to economic and social disaster. Perkins seems to have predicted the future, but this time it will no longer be confined to this or that area. In addition to *Man and Nature*, Marsh was a linguist who spoke some 20 languages, as well as a congressman, lawyer, and diplomat who served as U.S. envoy to Turkey and Italy for 25 years. He also helped found and guide the Smithsonian Institution. Lowenthal, emeritus professor of geography, University College, London, published an earlier biography of Marsh in 1958. The Prophet Kahlil Gibran, 2022-05-24 'The Prophet' is a collection of prose poetry offering spiritual insights into a range of subjects. Through 26 fables, Gibran explores everything from love, marriage, and children to the nature of good and evil, friendship and death. An extraordinary work, it lyrically suggests that we should welcome being present on the Earth and, only after we die will we understand the greater meaning behind our personal highs and lows. An eminently quotable book for those who want to delve into the idea of spiritual enrichment. The book was adapted into a film by the Mexican actor and producer Salma Hayek. The voices of Liam Neeson and Frank Langella were also used in the animated film. Born in Lebanon, but to move to the USA, Kahlil Gibran (1883 – 1931) was an important figure in the Romantic movement of the early 20th Century. Although he regarded himself more as a

painter than an author, his writing challenged the established rigidity of traditional Arabic literature. In his works, he explored the theory of the loss of natural beauty in the modern world, alienation, and personal discord. Influenced by the Romantic writings of 19th Century European authors, Gibran is widely recognised as one of the most intellectually-sensitive writers of his time.

Prophets of Nature Charles Gordon Strachan, 2008 Many millennia before the present Scriptures existed, God wrote his first book, namely, nature itself. It was through this 'original Bible' that men and women of ancient times experienced the mind and will of God. It then seemed as if the eighteenth century intellectual Enlightenment closed that book forever. However in the following century, the Romantic poets and painters rediscovered the spirit enshrined in the natural world. This perceptive study, by well-known thinker and writer Gordon Strachan, discusses the tradition of green spirituality as seen through poets such as Wordsworth and Coleridge, and painters such as Samuel Palmer, Caspar David Friedrich and William Turner. Strachan argues for the genuine spiritual vision of these artists before the so-called twilight of Romanticism set in. He shows that there are many deep springs of inspiration in their work which chime with our current environmental concerns.

Prophet,2019-08-20 How can we help Mother Nature? Nature spirits, also known as elementals, are the unseen helpers who lovingly tend the elements of earth, air, fire, and water in Earth's biosphere. Given the weight of world karma, the burden of humankind's negative thoughts, words and deeds, and the high levels of pollution and ecological imbalance in the world today, the nature spirits desperately need our help. In this time of environmental change, it will take renewed cooperation between the human race and the nature spirits to restore balance to Mother Earth. This inspiring book provides practical spiritual tools to restore harmony to the environment, mitigate extreme weather conditions, and return Earth to its original pristine beauty. A Select Library of Nicene and Post-Nicene Fathers of the Christian Church: Theodoret, Jerome Gennadius, Rufinus: Historical writings, etc. 1892 Philip Schaff, Henry Wace, 1892

Beginning Again David Ehrenfeld, 1993 Early in this volume, David Ehrenfeld describes what prophecy really is. Referring to the biblical prophets, he says they were not the holy fortunetellers that the word prophet has come to signify....The business of prophecy is not simply foretelling the future; rather it is describing the present with exceptional truthfulness and accuracy. Once this is done, then it can be seen that broad aspects of the future have suddenly become apparent. The twentieth century is drawing to a chaotic close amidst portents of unprecedented change and upheaval. The unravelling of societies and civilizations and the destruction of nature march together--linked--a fact whose enormous significance is often lost. In Beginning Again, David Ehrenfeld has undertaken the difficult task of describing the present clearly enough to reveal the future. Out of his broad vision emerges a glimpse of a new millennium: a vision at once frightening and comforting, a scene of great devastation and great

rebuilding. Ehrenfeld ranges far and wide to present a coherent vision of our relationship with Nature--its many aspects and implications--as our century opens into the next millennium. Whether he is writing about the problem of loyalty to organizations, rights versus obligations, our over-managed society, the vanishing of established knowledge, the failure of experts, the triumph of dandelions, Dr. Seuss, Edward Teller, or the future of farming, he is always concerned with the intricate interaction between technology and nature. As in his classic book, *The Arrogance of Humanism*, Ehrenfeld never loses sight of our fatal love affair with the fantasy of control. We now have no choice, he argues, but to transform the dream of control, of progress, from one of overweening hubris, love of consumption, and the idiot's goal of perpetual growth, to one based on the inventive imitation of nature, with its honesty, beauty, resilience, and durability. Few American writers and even fewer scientists can describe these timeless, transcendent qualities of nature so well. In *Places*, the opening chapter, David Ehrenfeld tells about nightly vigils he spent alone on the moonlit beach of Tortuguero, watching giant sea turtles emerging from the sea to lay their eggs in the black sand where they were born. I could watch the perfect white spheres falling, he writes. Falling as they have fallen for a hundred million years, with the same slow cadence, always shielded from the rain or stars by the same massive bulk with the beaked head and the same large, myopic eyes rimmed with crusts of sand washed out by tears. Minutes and hours, days and months dissolve into eons. I am on an Oligocene beach, an Eocene beach, a Cretaceous beach--the scene is the same. It is night, the turtles are coming back, always back; I hear a deep hiss of breath and catch a glint of wet shell as the continents slide and crash, the oceans form and grow.
