Sea Floor Exploration Roger Hekinian, 2014-01-09 The author participated in 38 sea going expeditions including the first manned-submersible project to explore the Mid-Atlantic Ridge. This

book provides a comprehensive overview of the past 45 years of sea floor exploration. It summarizes the mineralogical and petrological composition of sea floor rocks, ocean floor volcanism in relation to the geological setting and the discovery of hydrothermal activity. In addition to learning about various scientific missions and their objectives, the reader is introduced to rift zones where the sea floor is being created, as well as to fracture zones, intraplate volcanoes, and the structural setting of subduction zones

**Oceanic Hotspots** Roger Hekinian, Peter Stoffers, Jean-Louis Cheminée, 2012-12-06 Ocean Hotspots provides a comprehensive overview of recent and ongoing research on intraplate volcanism in the ocean basins with special emphasis on the Pacific Ocean. The geology of the seamounts and their associated seamount chains is described, along with detailed geophysical, geochemical and hydrothermal observations made by a multi-disciplinary group of marine geoscientists. These observations lead to a deeper understanding of how the ascending mantle melts, represented by hotspots, are able to penetrate the lithosphere, build seamounts, and enhance hydrothermal circulation. The fixed hotspot-generated seamount chains also provide key constraints on plate tectonic reconstructions on the Earth's crust.

**Future Needs in Deep Submergence Science** National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Future Needs in Deep Submergence Science, 2004-04-05 Deep-diving manned submersibles, such as Alvin, which gained worldwide fame when researchers used it to reach the wreck of the Titanic, have helped advance deep-ocean science. But many scholars in this field have noted that the number and capabilities of today's underwater vehicles no longer meet current scientific demands. At the same time, the relative value of manned and unmanned vehicles is often disputed. The report finds that new submersibles-both manned and

unmanned-that are more capable than those in the current fleet are needed and would be of great value to the advancement of ocean research.

*Submarines and Underwater Exploration* Bruce LaFontaine,1999-06-01 Forty-four dramatic, ready-to-color illustrations chronicle human attempts to explore the watery realms, from a crude Roman diving suit with a floating air bag (AD 375) to the 21st-century nuclear sub Seawolf. Captions.

*Ships from the Depths* Fredrik Søreide,2011-04-28 Deepwater archaeology uncovers secrets from the ancient maritime past . . . Thousands of shipwrecks and archaeological sites lie undiscovered in deep water, potentially holding important clues to our maritime past. Scientists have explored only a small percentage of the oceans' depths, as 98 percent of the seabed lies well beyond the reach of conventional diving. *Ships from the Depths* surveys the dramatic advances in technology over the last few years that have made it possible for scientists to locate, study, and catalogue archaeological sites in waters previously inaccessible to humans. Researcher and explorer Fredrik Søreide presents the development of deepwater archaeology since 1971, when Willard Bascom designed his Alcoa Seaprobe to locate and raise deepwater wrecks in the Mediterranean. Accompanied by descriptions and color photographs of deepwater projects and equipment, this book considers not only techniques that have been developed for location and observation of sites but also removal and excavation

methods distinctive to these unique locations, far beyond the reach of scuba gear. Søreide provides an introduction to and survey of the history, development, and potential of this exciting branch of nautical archaeology. Scholars and field archaeologists will appreciate this handy compendium of the current state of the discipline and technology, and general readers will relish this comprehensive look at the challenges and opportunities associated with locating and studying historical and ancient shipwrecks in some of the world's deepest waters.
