The Stars of Galileo Galilei and the Universal Knowledge of Athanasius Kircher Roberto

Buonanno,2014-01-31 In this fascinating book, the author traces the careers, ideas, discoveries, and inventions of two renowned scientists, Athanasius Kircher and Galileo Galilei, one a Jesuit, the other a sincere man of faith whose relations with

the Jesuits deteriorated badly. The Author documents Kircher's often intuitive work in many areas, including translating the hieroglyphs, developing sundials, and inventing the magic lantern, and explains how Kircher was a forerunner of Darwin in suggesting that animal species evolve. Galileo's work on scales, telescopes, and sun spots is mapped and discussed, and care is taken to place his discoveries within their cultural environment. While Galileo is without doubt the "winner" in the comparison with Kircher, the latter achieved extraordinary insights by unconventional means. For all Galileo's fine work, the author believes that scientists do need to regain the power of dreaming, vindicating Kirchner's view.

Rubens Anne T. Woollett, Davide Gasparotto, Jeffrey Spier, 2021-11-02 The first study devoted to classical art's vital creative impact on the work of the Flemish painter Peter Paul Rubens. For the great Peter Paul Rubens (1577–1640), the classical past afforded lifelong creative stimulus and the camaraderie of humanist friends. A formidable scholar, Rubens ingeniously transmitted the physical ideals of ancient sculptors, visualized the spectacle of imperial occasions, rendered the intricacies of mythological tales, and delineated the character

of gods and heroes in his drawings, paintings, and designs for tapestries. His passion for antiquity profoundly informed every aspect of his art and life. Including 170 color illustrations, this volume addresses the creative impact of Rubens's remarkable knowledge of the art and literature of antiquity through the consideration of key themes. The book's lively interpretive essays explore the formal and thematic relationships between ancient sources and Baroque expressions: the significance of neo-Stoic philosophy, the compositional and iconographic inspiration provided by exquisite carved gems, Rubens's study of Roman marble sculpture, and his inventive translation of ancient sources into new subjects made vivid by his dynamic painting style. This volume is published to accompany an exhibition on view at the J. Paul Getty Museum at the Getty Villa from November 10, 2021, to January 24, 2022.

The Metropolis in Latin America, 1830-1930

Idurre Alonso, Maristella Casciato, 2021-08-17 This volume examines the unprecedented growth of several cities in Latin America from 1830 to 1930, observing how sociopolitical changes and upheavals created the conditions for the birth of the metropolis. In the century between 1830 and 1930, following independence from Spain and Portugal, major cities in Latin America experienced large-scale growth, with the development of a new urban bourgeois elite interested in projects of modernization and rapid industrialization. At the

same time, the lower classes were eradicated from old city districts and deported to the outskirts. The Metropolis in Latin America, 1830–1930 surveys this expansion, focusing on six capital cities—Havana, Mexico City, Rio de Janeiro, Buenos Aires, Santiago de Chile, and Lima—as it examines sociopolitical histories, town planning, art and architecture, photography, and film in relation to the metropolis. Drawing from the Getty Research Institute’s vast collection of books, prints, and photographs from this period, largely unpublished until now, this volume reveals the cities’ changes through urban panoramas, plans depicting new neighborhoods, and photographs of novel transportation systems, public amenities, civic spaces, and more. It illustrates the transformation of colonial cities into the monumental modern metropolises that, by the end of the 1920s, provided fertile ground for the emergence of today’s Latin American megalopolis.
