Historical Common Names of Great Plains Plants Volume I: Historical Names (paperback) Elaine Nowick,2014-10 Containing thousands of entries of both vernacular and scientific names of Great Plains plants, the literature that informs this exhaustive listing spans nearly 300 years. Author Elaine Nowick has drawn from sources as diverse as Linnaeus, Lewis and Clark, and local university extension publications to compile the gamut of practical, and often fanciful, common plant names used over the years. Each common name is accompanied by a definitive scientific name with references and authority information. Interspersed with scientifically-correct botanical line drawings, the entries are written in standard ICBN format, making this a useful volume for scholars as well as lay enthusiasts alike. Volume 1 presents, in alphabetical order, all the historical common names of plants recorded in Great Plains flora, herbaria, and botanical collections, together with the scientific names of species to which those common names have been applied.

Agricultural Sustainability and Environmental Change at Ancient Gordion John M. Marston,2017-07-05 This book publishes the results of 220 botanical samples from the 1993-2002 Gordion excavations directed by Mary Voigt. Together with Naomi Miller's 2010 volume (Gordion Special Studies 5), this book completes the publication of botanical samples from Voigt's excavations. The book aims to reconstruct agricultural decision making using archaeological and paleoenvironmental data from Gordion to describe environmental and agricultural changes at the site. John M. Marston argues that different political and economic systems implemented over time at Gordion resulted in patterns of agricultural decision making that were well adapted to the social setting of farmers in each period, but that these practices had divergent environmental impacts, with some regimes sponsoring sustainable agricultural practices and others leading to significant environmental change. The implications of this book are twofold: Gordion will now be one of the best published agricultural datasets from the entire Near East and, thus, serve as a valuable comparable dataset for regional synthesis of agricultural and environmental change, and the methods the author developed to reconstruct agricultural change at Gordion serves as tools to engage questions about the relationship between social and environmental change at sites worldwide. Other books address similar themes but none in the Near East address these themes in diachronic perspective such as we have at Gordion. University Museum Monograph, 145
