Automobile Year 2006/07 Ian Norris, 2006-12 Published for more than 50 years, this annual covers the year's main motoring events, from Formula One to the latest styling studies and concept cars, and takes an overview of the period it has chronicled. Famous photographers look back and select their favourite images from more than five decades of racing.

Top Gear: Daft Cars Matt Master, 2012-07-31 From flying cars to amphibious vehicles, solar-powered saloons to rockets on wheels, these are over 50 of the most wacky cars ever devised. Fancy a car that drives sideways? Try the Jeep Hurricane. Or maybe a car in which the windows change colour according to your mood for a more serene and health-giving driving experience? That'll be the Toyota RiN. And if you like a flutter, you'll need the Chrysler Town and Country Black Jack, which contains a mini onboard casino. Some concept cars are designed to demonstrate alternative materials and energy sources, or to showcase the gadgets of the future, or even cater for specific lifestyles or groups of people. Many don't even get beyond the prototype stage - for reasons of cost or practicality, or, in the case of the nuclear-powered Ford Nucleon of 1958, the danger of causing a small atomic explosion. Featuring everything from practical experiments such as the hatchback fire engine, and ideas that have managed to make it into production, to stunning yet impractical supercar concepts, this book both celebrates and cringes at some of motoring's most daft - and even idiotic - ideas.

Informatics in Control, Automation and Robotics Juan Andrade Cetto, Jean-Louis Ferrier, Joaquim Filipe, 2011-05-02 The present book includes a set of selected papers from the seventh International Conference on Informatics in Control Automation and Robotics (ICINCO 2010), held in Madeira, Portugal, from 15 to 18 June 2010. The conference was organized in three simultaneous tracks: Intelligent Control Systems and Optimization, Robotics and Automation and Signal Processing, Systems Modeling and Control. The book is based on the same structure. ICINCO received 320 paper submissions, not including those of workshops or special sessions, from 57 countries, in all continents. After a double blind paper review performed by the Program Committee only 27 submissions were accepted as full papers and thus selected for oral presentation, leading to a full paper acceptance ratio of 8%. Additional papers were accepted as short papers and posters. A further refinement was made after the conference, based also on the assessment of presentation quality, so that this book includes the extended and revised versions of the very best papers of

ICINCO 2010. Commitment to high quality standards is a major concern of ICINCO that will be maintained in the next editions of this conference, including not only the stringent paper acceptance ratios but also the quality of the program committee, keynote lectures, workshops and logistics.

TRIZ. Theory of Inventive Problem Solving Vladimir Petrov,2019-04-01 This introductory book describes the initial (first) level of studying the theory of inventive problem solving (TRIZ) from the series "TRIZ from A to Z," and presents the most general methods for solving inventive problems and generating new ideas. Chapter 1 examines traditional technologies for problem solving, based on trial and error. Chapter 2 describes the general concept of TRIZ, while Chapter 3 explains the main notions of "system" approaches, like system thinking, system and its hierarchy, system effect, emergency, synergetic effect and systematicity. In turn, Chapter 4 describes the notion of "ideality" and Chapter 5 addresses the notion of resources, their types, and methods for using them. Chapter 6 acquaints readers with one of the most important aspects of TRIZ: contradiction. Chapter 7 describes the inventive principles, while Chapter 8 includes descriptions of the systems of trends proposed by G. Altshuller and the author. In closing, the author makes recommendations on how to most effectively use TRIZ tools, on how readers can improve their knowledge, skills and habits concerning the use of TRIZ, and on how they can hone their inventive thinking skills. The book also features Appendices that include analyses of selected problems, a list of the main websites related to TRIZ, and lists of examples, problems, illustrations, tables and formulae.

Electric and Hybrid Vehicles Gianfranco Pistoia,2010-07-27 *Electric and Hybrid Vehicles: Power Sources, Models, Sustainability, Infrastructure and the Market* reviews the performance, cost, safety, and sustainability of battery systems for hybrid electric vehicles (HEVs) and electric vehicles (EVs), including nickel-metal hydride batteries and Li-ion batteries. Throughout this book, especially in the first chapters, alternative vehicles with different power trains are compared in terms of lifetime cost, fuel consumption, and environmental impact. The emissions of greenhouse gases are particularly dealt with. The improvement of the battery, or fuel cell, performance and governmental incentives will play a fundamental role in determining how far and how substantial alternative vehicles will penetrate into the market. An adequate recharging infrastructure is of paramount importance for the diffusion of vehicles powered by batteries and fuel cells, as it may contribute to overcome the so-called range anxiety. Thus, proposed battery charging techniques are summarized and hydrogen refueling stations are described. The final chapter reviews the state of the art of the current models of hybrid and electric vehicles along with the powertrain solutions adopted by the major automakers. Contributions from the worlds leading industry and research experts Executive summaries of specific case studies Information on basic research and application approaches
