

Nuthatch

Arthur Cleveland Bent

The Nuthatches Erik Matthysen, 2010-01-31 *The Nuthatches* is based on the European Nuthatch, with comparative information on the other west Palearctic and world species. The nuthatches are common and widespread birds throughout the Northern Hemisphere, but only poorly studied until quite recently. Erik Matthysen's extensive studies, started in 1982, have done much to illuminate the ecology of the Eurasian species, and to create a rich picture both of this bird and its 23 fellows around the world. The nuthatches are familiar for their peculiar, head-down, foraging style on the trunks of mature woodland trees. They are also noteworthy for their generally elaborate nest building behaviour - ten of the nuthatch species use mud to reduce the nest cavity entrance (a behaviour otherwise shown only by hornbills) while others make elaborate constructs entirely of mud, or use resin to repel nest predators. They also exhibit a complex territorial system and associated behavioural repertoire, occupying a territory as a pair, year round, perhaps as an adaptation to their reliance on stored food during the winter months. The intricate dynamics of pair-bond stability, territory size and the various strategies of floating, non-territory holders is the subject of an entire and fascinating chapter. The habitat fragmentation that has accompanied widespread disruption of woodland habitats everywhere has had a profound effect on territorial and social behaviour and this too is dealt with at length. Following a detailed description of the ecology and behaviour of the Eurasian Nuthatch, Erik Matthysen goes on to consider what is known of the other species, and to compare and contrast their biology. Although many are poorly known, this part of the book enables many fascinating insights and sets the scene for further work which may explain the links between the ecology, behaviour, habitat and evolutionary relationships of the various species. David Quinn's excellent drawings complete an interesting and authoritative volume.

Tits, Nuthatches and Treecreepers Simon Harrap,2010-06-30 This guide covers all 110 of the world's species of tits, nuthatches and creepers. The Parulidae (true tits), Remizidae (penduline tits) and Aegithalidae (long-tailed tits) form the bulk of the book (78 species), with a further 24 species of nuthatch and eight creepers. The text covers each species under a number of headings: identification, sex and age, voice, distribution and movements, habitat, population, habits, breeding biology, description, movements, geographical variation, relationships, and references.

Make A Magic Wish Nancy D Smith, 2021-01-20 Marlene loves birds, especially a little nuthatch called Mert, who she has fed all winter from her bedroom window. With some magical help, Mert takes Marlene on an amazing adventure high up into the treetops. Marlene sees things she has never seen before. Late at night Marlene realizes she is far from home and her mother doesn't know where she is. It will take some more magic to bring her back home. Early and pre-reader for family and classroom. Full color storybook, 31 illustrations. I developed Mert's character on the behavior of a nuthatch. As I wrote this story, I did research on the behavior and habits of nuthatches and talked with some bird watchers. Here are some interesting facts about these wonderful little birds. Nuthatches find everything they need in trees. They drink the water trapped in leaves and pinecones and eat bugs and seeds found in their tree homes. Nuthatches are the only birds that hide seeds under tree bark. Nuthatch families live in holes hollowed out by bugs, weather, or woodpeckers. Most nuthatches prefer to live in pine trees. Nuthatches help each other. Older siblings will often help their parents care for newly hatched babies. When nuthatches are cold they snuggle together for warmth. A biologist has seen about 100 nuthatches squeeze together in a hole in a tree on a cold winter day. Walking up or down doesn't matter to nuthatches. They walk upside down or sideways on tree trunks or branches to get where they want to go. Most nuthatch families like to stay home for the winter.

They travel south only when food is scarce. Young birds, such as Mert, explore new territories to find food and friends. Do you want to see a nuthatch? Put big fat seeds, peanuts and peanut butter in your bird feeder to attract new bird friends! You can find nuthatches in North America from Canada to Mexico. On the Internet, allaboutbirds.org is a good site where you can learn more about nuthatches.
