Fishes of the Open Ocean Julian G. Pepperell,2010-01-01 QLD Premier's Book Awards

-- Shortlisted Science Writer Award Awarded a 2010 Whitley Certificate of Commendation for Natural History The largest, swiftest, highest-leaping, fastest-growing and most migratory fishes on the planet all live in the open ocean. Beautifully adapted to their world, they range from tiny drift fish and slow plankton-straining whale sharks to high-energy, streamlined predators such as tuna and marlin. Fishes of the Open Ocean, from Julian Pepperell, one of Australia's best-known marine biologists and world authority on oceanic fishes, is the first book to describe these fishes and detail their biology and the complex, often fragile world in which they live. This unique guide covers all major species including tuna, marlin, swordfish and pelagic sharks, as well as lesser-known ones such as flying fish, lancetfish, sunfish, pomfret, opah, louvar, fanfish and basking sharks.

Fishes Gene Helfman, Bruce Collette, 2011-11-03 One fish, two fish, red fish, nearly thirty thousand species of fish -- or fishes, as they are properly called when speaking of multiple species. This is but one of many things the authors of this fascinatingly informative book reveal in answering common and not-so-common questions about this ubiquitous group of animals. Fishes range in size from tiny gobies to the massive Ocean Sunfish, which weighs thousands of pounds. They live in just about every body of water on the planet. Ichthyologists Gene Helfman and Bruce Collette provide accurate, entertaining, and sometimes surprising answers to over 100 questions about these water dwellers, such as How many kinds of fishes are there? Can fishes breathe air? How smart are fishes? and Do fishes feel pain? They explain how bony fishes evolved, the relationship between them and sharks, and why there is so much color variation among species. Along the way we also learn about the Devils Hole Pupfish, which has the smallest range of any

vertebrate in the world; Lota lota, the only freshwater fish to spawn under ice; the Candiru, a pencil-thin Amazonian catfish that lodges itself in a very personal place of male bathers and must be removed surgically; and many other curiosities. With over 100 photographs -- including two full-color photo galleries -- and the most up-to-date facts on the world's fishes from two premier experts, this fun book is the perfect bait for any curious naturalist, angler, or aquarist.

A Fascination for Fish David C. Powell, 2003-04-24 This autobiography is a charming and accurate telling by a modest man whose brilliant career has allowed millions to venture into the sea and feel what Dave feels when he's underwater—without getting wet!—John E. McCosker, Director Emeritus, Steinhart Aquarium, San Francisco Dave Powell is one of the giants in the development of the modern public aquarium. His great talents and skill have come from years of working with the technology of public aquariums, and also from a great love of the sea. This book is a wonderful tale of his adventures (and misadventures) as he worked to capture the essence of the ocean and bring it to public view.—Bruce Carlson, Director, Waikiki Aquarium, Honolulu Gobies,

The Great Bear Sea Nicholas Read, 2013-09-01 This amazing part of the northeast Pacific Ocean is home to some of the planet's mightiest and most beloved residents: whales, sea lions, dolphins, orcas, sea otters and wild salmon. Following up the success of their first two books about the Great Bear Rainforest, *The Salmon Bears* and *The Sea Wolves*, Ian McAllister and Nicholas Read take readers on an expedition into the wondrous and mysterious underwater world of the Great Bear Sea. Filled with spectacular images of this largely unknown part of the world, the book also explores the uncertain future of the Great Bear Sea in this age of climate change, overfishing, pipelines and oil tankers. Can a rainforest full of rare spirit bears, fishing wolves and great grizzlies survive without a Great Bear Sea to feed and nourish it?
