**Fiddler Crabs of the World** Jocelyn Crane,2015-03-08 Jocelyn Crane presents a survey of the members of the genus *Uca*, with special reference to their morphology, social behavior, and evolution. Her account is firmly based on numerous field studies along the world's warmer shores and on comparative work in laboratories and museums. Originally published in 1975. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

**Reproductive Biology of the Texas Ghost Crab, *Ocypode Albicans* Bosc (Decapoda: Ocypodidae).** Samuel Randolph Haley,1967 Certain brachyura exhibit homing instincts which appear entirely equivalent to those of purely terrestrial forms. Cowles (1908) observed that *O. arenaria* returns directly to its burrow when in danger, even when some distance away. Hiatt (1948) presented other examples of this behavior, which is another expression of the fossorial habit. *O. albicans* appears to behave in this manner. These and other criteria have been presented (Hiatt, 1948) as evidence for a transition from a purely aquatic to a purely terrestrial mode of life. On the basis of these requirements, *O. albicans* is a near-terrestrial species. However, in its life history, this crab has a swimming zoea larval stage which is absolutely dependent upon the sea for survival. These characteristics are particularly attractive to the embryologist interested in adaptive reproduction and the ghost crab presents an opportunity to study reproductive and developmental adaptations in an animal in evolutionary flux between two vastly divergent environments. This attraction led me to investigate the reproductive biology of the Texas ghost crab. My original intent had been to include an account of the pre-larval embryology in order to provide a basis for an analysis of brachyuran development. At the outset I was awakened to the paucity of published information which might serve as a foundation for an embryological study. In the time available to me, I was able only to provide the framework for the ultimate study of embryological adaptations to the terrestrial habitat. At the beginning of each portion of this study, I have provided a brief historical introduction to that aspect of the problem. I have endeavored to present data in a manner most convenient to workers in each of the areas of investigation. Finally, I have presented my conclusions in the form of a summary, which, I believe, is the most useful technique in this form of study--Leaves 4-5

**Biology of the Land Crabs** Warren W. Burggren,Professor of Biology Warren W Burggren,Brian R. McMahon,1988-04-29 Interest in land crabs has burgeoned as biologists have increasingly focused on the evolution of terrestriality. Before the publication of this volume in 1988, there had been no single comprehensive source of information to serve biologists interested in the diverse aspects of terrestrial decapod crustacean. *Biology of the Land Crabs* was the first synthesis of recent and long-established findings on brachyuran and anomuran crustaceans that have evolved varying degrees of adaptation for life on land. Chapters by leading researchers take a coordinated evolutionary and comparative approach to systematics and evolution, ecology, behaviour, reproduction, growth and molting, ion and water balance, respiration and circulation, and energetics and locomotion. Each discusses how terrestrial species have become adapted from ancestral freshwater or marine forms. With its extensive bibliography and comprehensive index, including the natural history of nearly eighty species of brachyuran and anomuran crabs, *Biology of the Land Crabs* will continue to be an invaluable reference for researchers and advanced students.

*Zoological Catalogue of Australia: 3B. Crustacea: Malacostraca, Eucarida (pt. 2), Decapoda-Anomura-Brachyura* ,1983 The published works are derived from the Zoological catalogue of Australia database. Taxa in the Australian fauna are divided among volumes to form sets of about 1800-2000 species available names, such that each volume comprises the whole or part of one or more major groups.

*Studies on Brachyura* Peter Castro,Peter J. F. Davie,Peter K. L. Ng,2010 This volume is in honour of Danièle Guinot (Muséum National d'Histoire Naturelle, Paris, France), and was born out of our admiration for Danièle's immense contributions to her discipline. She has helped reawaken interest on the systematics of brachyuran decapods crustaceans, the true crabs. Furthermore, she has significantly helped to redefine the study of the complete evolutionary process in crabs. A total of 35 of her colleagues have contributed to this volume, submitting papers on those aspects of the *Brachyura* to which Danièle, herself, has significantly contributed taxonomy, evolution, morphology, palaeontology and general biology of crabs. This volume is but a small tribute to a highly respected colleague and friend from the active band of researchers that she has helped so much over the years.

**Brazilian Mangroves and Salt Marshes** Yara Schaeffer-Novelli,Guilherme Moraes de Oliveira Abuchahla,Gilberto Cintrón-Molero,2023-02-25 This book offers a new ecosystemic approach to the understanding of mangrove and salt marsh ecosystems. Brazil has one of the largest areas of mangroves in the world, where salt marshes might or might not be associated. Different landscapes comprise the extensive coastline, where mangrove and salt marsh species' composition is discussed through the analysis of physiography, zonation, and succession processes. Both salt marsh and mangrove plants and the associated macroalgae will be characterized in their ecophysiological and phenological aspects, as well as genetic and epigenetic diversity. The chapters on microbial diversity and litterfall expose the well-known importance of these ecosystems as highly productive carbon sinks and pumps. The associated fauna of invertebrates (benthic meio and macrofaunas, especially brachyuran crabs) and vertebrates (fishes, birds, and mammals) are presented in a special section. The conservational approach encompasses issues, such as historical ecology,

economic valuation, protected areas, environmental education, climate changes, and adaptive management.

Practical Handbook of Marine Science Michael J. Kennish, 2019-07-12 The heavily-revised Practical Handbook of Marine Science, Fourth Edition continues its tradition as a state-of-the-art reference that updates the field of marine science to meet the interdisciplinary research needs of physical oceanographers, marine biologists, marine chemists, and marine geologists. This edition adds an entirely new section devoted to Climate Change and Climate Change Effects. It also adds new sections on Estuaries, Beaches, Barrier Islands, Shellfish, Macroalgae, Food Chains, Food Webs, Trophic Dynamics, System Productivity, Physical-Chemical-Biological Alteration, and Coastal Resource Management. The Handbook assembles an extensive international collection of marine science data throughout, with approximately 1,000 tables and illustrations. It provides comprehensive coverage of anthropogenic impacts in estuarine and marine ecosystems from local, regional, and global perspectives. Maintaining its user-friendly, multi-sectional format, this comprehensive resource will also be of value to undergraduate and graduate students, research scientists, administrators, and other professionals who deal with the management of marine resources. Now published in full color, the new edition offers extensive illustrative and tabular reference material covering all the major disciplines related to the sea.

**The Decapoda Brachyura of the Siboga Expedition, Vol. 1** J. J. Tesch, 2017-11-08 Excerpt from The Decapoda Brachyura of the Siboga Expedition, Vol. 1: Hymenosomidae, Retroplumidae, Ocypodidae, Grapsidae and Gegarcinidae With 6 Plates I have to thank heartily my fellow-countryman Dr. J. G. DE man, who kindly and readily, in his usual way, assisted me by lending rare memoirs. The help of this excellent carcinologist has been the more appreciated by me, as international scientific intercourse nowadays is reduced to the extreme! Treatise on Zoology - Anatomy, Taxonomy, Biology. The Crustacea, Volume 9 Part C (2 vols) Peter Castro, Peter Davie, Danièle Guinot, Frederick Schram, Carel von Vaupel Klein, 2015-11-24 This volume, 9C, covers the Brachyura.

*Ecology of Marine Invertebrate Larvae* Larry McEdward, 2020-04-08 This is the first book to provide a detailed treatment of the field of larval ecology. The 13 chapters use state-of-the-art reviews and critiques of nearly all of the major topics in this diverse and rapidly growing field. Topics include: patterns of larval diversity, reproductive energetics, spawning ecology, life history theory, larval feeding and nutrition, larval mortality, behavior and locomotion, larval transport, dispersal, population genetics, recruitment dynamics and larval evolution. Written by the leading new scientists in the field, chapters define the current state of larval ecology and outline the important questions for future research.

Behavioral Adaptation to Intertidal Life Guido Chelazzi, Marco Vannini, 2013-12-20 The NATO Advanced Research Workshop on Behavioural Adaptation to Intertidal Life held in Castiglione della Pescaia, Italy (May, 1987) was attended by 50 participants, most of whom presented requested lectures. It was perhaps the first time that specialists of various animal groups, from cnidarians to birds, were able to meet and discuss the importance of behavioural adaptation to this peculiar, sometimes very harsh environment. But the taxonomic barrier is not the only one which the meeting attempted to overcome. Lately, the research on intertidal biology has spread from pure taxonomy and static analysis of community structure to such dynamic aspects as intra- and interspecific relationships, and physiological mechanisms aimed at avoiding stress and exploitation of limited-resources. This increasing interest stems not only from an inclination for this particular ecological system and some of its typical inhabitants, but also from the realization that rocky and sandy shore communities are suitable models for testing and improving some global theories of evolutionary biology, behavioural ecology and sociobiology. The number of eco-physiological and eco-ethological problems emerging from the study of intertidal animals is fascinatingly large and a complete understanding of this environment cannot be reached using a strictly reductionistic or a pure holistic approach.

**Marine Decapod Crustacea** Gary C.B. Poore, Shane T. Ahyong, 2023-01-23 Decapod crustaceans, shrimps, crabs, prawns and their allies are highly visible and important members of marine environments. They are among the most charismatic of marine animals, inhabiting beaches, rocky shores and the deep sea, hiding under stones, burrowing in the sediment and nestling in among algae and many other microhabitats. However, most are difficult to identify by the specialist and amateur naturalist alike. Marine Decapod Crustacea explains the anatomical features necessary for differentiating taxa and includes diagnoses and identification keys to all 189 families and 2121 genera of marine Decapoda. Many decapods have vivid colours, which are showcased in a selection of spectacular photographs of many representative species. This volume provides an entry to the literature for taxonomists, naturalists, consultants, ecologists, teachers and students wanting to identify local faunas and understand this diverse group

*Behavior of Marine Animals* Howard E. Winn, Bori L. Olla, 2012-12-06 What have been brought together in these volumes are works representing a variety of modern quantitative studies on a select group of marine organisms. Some of the species studied here represent basic biological experimental subjects-in some cases, marine versions of the white rat and pigeon-that are being used for a wide range of studies. Other species studied were virtually unknown as experimental animals. The authors have studied their animals in considerable depth, often in both the field and the laboratory. It is this cross reference between real life and the artificial

but controlled conditions of the laboratory which gives us the necessary understanding, and ultimately the means, for improving our rapidly deteriorating environment, a must for man's survival, maintenance, and improvement of the quality of living standards. A direct outgrowth of a AAAS symposium entitled Recent Advances in the Behavior of Marine Organisms held in December 1966, these volumes include a reasonable balance between review and original unpublished research. Of the many persons who have made these volumes possible, we wish to especially thank Nancy Fish, Lois Winn, Mabel Trafford, and Deborah Brennan. The latter two accomplished most of the final editorial work. The personnel of Plenum Press were cooperative in all aspects of our relationship. Only the two editors are responsible for defects in the volumes. We believe the papers presented are significant and will be of importance to members of the scientific community.

*Animal Communication Networks* P. K. McGregor, 2005-03-31 Most animal communication has evolved and now takes place in the context of a communication network, i.e. several signallers and receivers within communication range of each other. This idea follows naturally from the observation that many signals travel further than the average spacing between animals. This is self evidently true for long-range signals, but at a high density the same is true for short-range signals (e.g. begging calls of nestling birds). This book provides a current summary of research on communication networks and appraises future prospects. It combines information from studies of several taxonomic groups (insects to people via fiddler crabs, fish, frogs, birds and mammals) and several signalling modalities (visual, acoustic and chemical signals). It also specifically addresses the many areas of interface between communication networks and other disciplines (from the evolution of human charitable behaviour to the psychophysics of signal perception, via social behaviour, physiology and mathematical models).

**A Guide to, and Checklist for, the Decapoda of Namibia, South Africa and Mozambique (Volume 3)** W. D. Emmerson, 2017-06-20 Decapods are a culmination of nearly 600 million years of Crustacean evolution, during which time they have radiated into a variety of superfamilies, families, genera and species which occupy a variety of niches from fresh mountain streams to the abysses of the oceans. This book will fill a gap in the current literature on southern African decapods. Since Barnard published his Descriptive Catalogue of South African Decapod Crustacea in 1950, there have been numerous additions and name changes. This publication updates the taxonomy, and includes ecological and fisheries information. In addition, Kensley's (1981) distributional checklist for the region has been updated and includes large numbers of new species and records for the region, bringing the total number of decapod to over 1000 species. Although not exhaustive, 262 species are featured, some of which are beautiful, some have commercial or artisinal value, both for consumption and the aquarium, and some have important ecological functions, while others are rare or interesting. For each species there is a photograph, synonymies, common names, a description, ecological information and name derivation (etymology). All the decapod families found in South Africa are described, some new, along with chapters on decapod research history in southern Africa, commercial and artisinal food value of decapods, biodiversity and future research direction. The book is arranged systematically, as taxonomy is based on phylogeny, starting with the earliest forms and progressing to the most derived and advanced forms, and will serve to stimulate interest and future research into southern Africa's rich decapod biodiversity, especially at a time when biodiversity itself is threatened by global warming, coral bleaching and habitat loss. It will appeal to people interested in Decapoda, including academics, scholars, students, fishermen, aquarists, aquaculturists, recreational snorkel and SCUBA divers, as well as those interested in conservation, biodiversity, management and governance.
