These studies reflect the far-reaching implications of protoplast technology in genetic engineering of plants. The book contains a wealth of useful

information for advanced students, teachers, and researchers in the field of plant tissue culture, molecular biology, genetic engineering, plant breeding, and general biotechnology.

Recent Advances in Plant Biotechnology and Its Applications Ashwani Kumar, Sudhir K. Sopory, 2008 This book is divided into five sections. The first section deals with the methodology and bioresource generation, techniques related to genetic engineering, and gene transfer to the nuclear genome and chloroplast genome. The new techniques of genome profiling and gene silencing are also presented. The second section of the book covers the classical aspect of plant biotechnology viz. tissue culture and micropropagation. Use of genetic engineering via *Agrobacterium* and direct transfer of DNA through particle bombardment to develop transformed plants in *Artemisia*, castor and orchids, and production of recombinant proteins in plant cells have been dealt with in the third section. The fourth section addresses the abiotic and biotic stress tolerance in plants. The basic biology of some of the stress responses, and designing plants for stress tolerance is discussed in this section. The fifth section examines medicinal plants and alkaloid production.

Hijikata Tatsumi and Butoh B. Baird, 2012-01-30 Hijikata Tatsumi's explosive 1959 debut *Forbidden Colors* sparked a new genre of performance in Japan - *butoh*: an art form of contrasts, by turns shocking and serene. Since then, though interest has grown exponentially, and people all over the world are

drawn to butoh's ability to enact paradox and contradiction, audiences are less knowledgeable about the contributions and innovations of the founder of butoh. Hijikata Tatsumi and Butoh traces the rollicking history of the creation and initial maturation of butoh, and locates Hijikata's performances within the intellectual, cultural, and economic ferment of Japan from the sixties to the eighties.

Senescence and Senescence-Related Disorders Wang Zhiwei,Hiroyuki Inuzuka,2013-02-20 Senescence is a biological process that causes a progressive deterioration of structure and function of all organs chronologically. Recent studies have revealed the detailed molecular mechanisms of senescence using cell culture system and experimental organisms. It is thought that senescence is a potential cause for the development of various age-related disorders such as cancer, cardiovascular and neurodegenerative disorders. This book discusses in detail senescence and its related diseases by distinguished researchers and practicing clinicians. The cumulative knowledge from the studies could lead to developing new approaches for anti-senescence interventions.

Individualism and Socialism: The Life and Thought of Kawai Eijirō (1891–1944) Atsuko Hirai, 2020-03-17 Kawai Eijirō was a controversial figure in Japan during the interwar years. Dedicated to the idea that the socialist aspiration for economic equality could be combined with a classical liberal commitment to individual political and civil rights, he antagonized both Marxists and Japanese nationalists. He was hounded by the government as a leftist and brought to trial during World War II. This is the first study of Kawai in English. Atsuko Hirai examines the family and school influences that contributed to the development of Kawai's thought, and analyzes the manner in which the ideas of such Western philosophers as Kant, Hegel, John Stuart Mill, Marx, T. H. Green, and the British labor ideologues were absorbed into a receptive and creative East Asian mind. The events of Kawai's life are intertwined with the development of his idealist political philosophy, all culminating in a trial of unprecedented scale.

Nomonhan Alvin D. Coox, 1985 From May to September 1939 Japan and the Soviet Union fought a fierce, large-scale undeclared war on the Mongolian plains that ended with a decisive Soviet victory with two important results: Japan reoriented its strategic emphasis towards the south, leading to war with the

United States, Britain, and the Netherlands; and Russia freed itself from the fear of fighting on two fronts, thus vitally affecting the course of the war with Germany.

Molecular Biology & Biotechnology of the Grapevine Kalliopi A. Roubelakis-Angelakis, 2013-04-17 Grapevine is one of the major cultivated plant crops. As with most woody plant species, molecular biology and biotechnology have progressed at a slow pace, due to several obstacles which have had to be overcome. However, substantial progress has now been made and useful information has been accumulated in the literature; numerous genes have been characterized from grapevine and significant progress has been made in the molecular and non-molecular biotechnological applications. In an effort to collect and present the state of the art on grapevine molecular biology and biotechnology, 41 scientists from 12 countries worked jointly on the preparation of this book. It is intended as a reference book for viticulturists, graduate and undergraduate students, biotechnological companies, and any scientist who is interested in molecular biology and biotechnology of plants with emphasis on grapevine.

Neurochemistry in Clinical Application Lily C. Tang, Stephen J. Tang, 2012-12-06 Neurological disorders cause untold suffering and financial burden to hundreds of thousands of people, not only to the patients, but also the relatives and society. As of today, though numerous scientists and clinicians have devoted their efforts to understand and combat these

diseases, there is still no cure or satisfactory solution to the problems. Furthermore, the brain is the most essential organ of a human being. Realizing the importance of the brain, the president of the United States, George Bush, declared the 90s as the Decade of the Brain in January, 1992. Being in neuroscience research for almost three decades, I initiated, planned and organized the first international neuropharmacology symposium. After long negotiation and fund raising, with the assistance and moral support of Dr. Abel Lajtha, director of the Center of Neurochemistry in New York, USA, we finally successfully put the program together. The Sun Yat-sen Foundation in China supported all the local expenses of the symposium and Sun Yat-sen University of Medicine in Guangzhou, China served as host organization. The symposium was held in Guangzhou, China, November 9-11, 1992, the eve of Dr. Sun Yat-sen's birthday. Dr. Sun Yat-sen was born in Cui Heng Cun, on the outskirts of Guangzhou, China on November 12, 1866. He finished his high school education in the British and American Christian school in Honolulu, where he was exposed to Western influence. He had been long frustrated and discontented with the backwardness and corruption of the Ching Dynasty.

Micropropagation of Woody Plants M.R. Ahuja, 2013-06-29 This volume covers recent advances in the vegetative propagation of woody plants by tissue culture. A wide range of topics relevant to micropropagation of woody plants are discussed by renowned international scientists. These include cellular control of morphogenesis, light regimes in tissue culture, maturation and

rejuvenation, synthetic seed, genetics of micropropagated plants, haploid embryogenesis, protoplast culture, and acclimatization of ex vitro woody plants. In addition to micropropagation of selected woody plants, both gymnosperms and angiosperms, this volume also includes in vitro genetic selection, strategic planning for application of biotechnology for genetics and breeding, and clonal options for woody plant improvement. A balanced view of both perspectives and limitations of woody plant micropropagation is presented.

Extreme Weather Events and Human Health Rais Akhtar, 2019-11-15 This edited book assesses the impacts of various extreme weather events on human health and development from a global perspective, and includes several case studies in various geographical regions around the globe. Covering all continents, it describes the impact of extreme weather conditions such as flash floods, heatwaves, cold waves, droughts, forest fires, strong winds and storms in both developing and developed countries. The contributing authors also investigate the spread of diseases and the risk to food security caused by drought and flooding. Further, the book discusses the economic damage resulting from natural disasters including hurricanes. It has been estimated that in 2017 natural disasters and climate change resulted in economic losses of 309 billion US dollars. Scientists also predict that if nothing is done to curb the effects of climate change, in Europe the death toll due to weather disasters could rise 50-fold by the end of the 21st century, with extreme

heat alone causing more than 150,000 deaths a year, as the report on global warming of 1.5°C warns that China, Russia and Canada's current climate policies would steer the world above a catastrophic 5°C of warming by the end of 2100. As such, the book highlights how the wellbeing of different populations is threatened by extreme events now and in the foreseeable future.

Applied and Fundamental Aspects of Plant Cell, Tissue, and Organ Culture
Jakob Reinert, Yashpal S. Bajaj, 2013-04-17 Progress in the field of plant cell and tissue culture has made this area of research one of the most dynamic and promising not only in plant physiology, cell biology and genetics but also in agriculture, forestry, horticulture and industry. Studies with plant cell cultures clearly have bearing upon a variety of problems as yet unsolved in basic and applied research. This was the compelling reason for assembling such a comprehensive source of information to stimulate students, teachers, and research workers. This book comprises 34 articles on regeneration of plants, vegetative propagation and cloning; haploids; cytology, cytogenetics and plant breeding; protoplasts, somatic hybridization and genetic engineering; plant pathology; secondary products and a chapter on isoenzymes, radiobiology, and cryobiology of plant cells. Particular attention has been paid to modern, fast-growing and fascinating disciplines - e.g. the induction of haploids, somatic hybridization and genetic manipulation by protoplast culture, which possess an enormous potential for plant

improvement.

Japan's Economic Planning and Mobilization in Wartime, 1930s–1940s Yoshiro Miwa, 2015-01-22 Although most economists maintain a mistrust of a government's goals when it intervenes in an economy, many continue to trust its actual ability. They retain, in other words, a faith in state competence. For this faith, they adduce no evidence. Sharing little skepticism about the government's ability, they continue to expect the best of governmental intervention. To study government competence in World War II Japan offers an intriguing laboratory. In this book, Yoshiro Miwa shows that the Japanese government did not conduct requisite planning for the war by any means. It made its choices on an ad hoc basis and the war itself quickly became a dead end. That the government planned for the war incompetently casts doubts on the accounts of Japanese government leadership more generally.

An Imperial Path to Modernity Jung-Sun N. Han, 2020-03-17 An Imperial Path to Modernity examines the role of liberal intellectuals in reshaping transnational ideas and internationalist aspirations into national values and imperial ambitions in early twentieth-century Japan. Perceiving the relationship between liberalism and the international world order, a cohort of Japanese thinkers conformed to liberal ideas and institutions to direct Japan's transformation into a liberal empire in Asia. To sustain and rationalize the imperial enterprise, these Japanese liberals sought to make the domestic political stage less hostile to liberalism. Facilitating the

creation of print-mediated public opinion, liberal intellectuals attempted to enlist the new middle class as a social ally in circulating liberal ideas and practices within Japan and throughout the empire. In tracing the interconnections between liberalism and the imperial project, Jung-Sun N. Han focuses on the ideas and activities of Yoshino Sakuzo (1878–1933), who was and is remembered as a champion of prewar Japanese liberalism and Taisho democracy. Drawing insights from intellectual history, cultural studies, and international relations, this study argues that prewar Japanese liberalism grew out of the efforts of intellectuals such as Yoshino who worked to devise a transnational institution to govern the Japanese empire.
