Imber, 2010-10-06 It is a great pleasure to share with you the Springer CCIS 112 proceedings of the Third World Summit on the Knowledge Society--WSKS 2010--that was organized by the International Scientific Council for the Knowledge Society, and supported by the Open Research Society, NGO, (<http://www.open-knowledge-society.org>) and the International Journal of the Knowledge Society Research, (<http://www.igi-global.com/ijksr>), and took place in Aquis Corfu Holiday Palace Hotel, on Corfu island, Greece, September 22-24, 2010. The Third World Summit on the Knowledge Society (WSKS 2010) was an international scientific event devoted to promoting the dialogue on the main aspects of the knowledge society towards a better world for all. The multidimensional economic and social crisis of the last couple years brings to the fore the need to discuss in depth new policies and strategies for a human-centric developmental process in the global context. This annual summit brings together key stakeholders of knowledge society development worldwide, from academia, industry, government, policy makers, and active citizens to look at the impact and prospects of information technology, and the knowledge-based era it is creating, on key facets of living, working, learning, innovating, and collaborating in today's hyper-complex world.

Last to Die Stephen Harding, 2015-07-14 On August 18, 1945 -- three days after Japan announced it would cease hostilities and surrender -- U.S. Army Air Forces Sergeant Anthony J. Marchione bled to death in the clear, bright sky above Tokyo. Just six days after his twentieth birthday, Tony Marchione died like so many before him in World War II -- quietly, cradled in the arms of a buddy who was powerless to prevent his death. Though heartbreaking for his family, Marchione's death would have been no more notable than any other had he not had the dubious distinction of being the last American killed in World War II combat. An aerial gunner who had already survived several combat missions, Marchione's death was the tragic culmination of an intertwined series of events. The plane that carried him that day was a trouble-plagued American heavy bomber known as the B-32 Dominator, which would prove a failed competitor to the famed B-29 Superfortress. And on the ground below, a palace revolt was brewing and a small number of die-hard Japanese fighter pilots decided to fight on, refusing to accept defeat. Based on official American and Japanese histories, personal memoirs, and the author's exclusive interviews with many of the story's key participants, Last to Die is a rousing tale of air combat, bravery, cowardice, hubris, and determination, all set during the turbulent and confusing final days of World War II.

Regional Change in Industrializing Asia Leo van Grunsven, 2019-01-04 First published in 1998 this book responds to the dynamics of Industrializing Asia and the behavioural changes of actors which, in response to changing internal and external forces, have given rise to and are constantly giving rise to alterations in patterns of growth. From a geographical perspective, these are expressed in regional change, understood as a reconstruction of spatial organization. The imperatives of dynamic comparative advantage, changing global or regional competitiveness, and regional competition, faced by different actors, entities or territorial units can be identified as important forces underlying and shaping regional change. This volume provides further illumination, contextualization and interpretation of the spatiality of the economic reality in Industrializing Asia, as well as the role played by, and the implications for, different actors. The objectives of this book are 1) to outline the processes of regional change, linked to responses in the form of restructuring and integrative and regionalization tendencies, as well as the realignment of the global-regional-local divide in production systems/complexes and the operation of firms associated with reorganization of production in the process of maintaining and reconfiguring comparative advantage; 2) to highlight the wide scope of the process by considering differential units of analysis, linked to the agents and manifestations of regional change, and the role of scale in terms of the spatial units involved; 3) to highlight the implications as to the current and future position or role of differential actors/agents (particularly nation state) in shaping the new economic reality in the region and as a corollary, its positioning in the global economic order.

Enlisted Naval Aviation Pilots ,2002 The early 1890s through the late 1920s saw an explosion in serious long fiction by women in the United States. Considering a wide range of authors--African American, Asian American, white American, and Native American--this book looks at the work of seventeen writers from that period: Frances Ellen Harper, Charlotte Perkins Gilman, Sarah Orne

Jewett, Alice Dunbar-Nelson, Kate Chopin, Pauline Hopkins, Gertrude Stein, Mary Austin, Sui Sin Far, Willa Cather, Humishuma, Jessie Fauset, Edith Wharton, Ellen Glasgow, Anzia Yeziarska, Edith Summers Kelley, and Nella Larsen. The discussion focuses on the differences in their work and the similarities that unite them, particularly their determination to experiment with narrative form as they explored and voiced issues of power for women. Analyzing the historical context that both enabled and limited American women writers at the turn of the century, Ammons provides detailed readings of many texts and offers extensive commentary on the interaction between race and gender. This book joins the deepening discussion of modern women writers' creation of themselves as artists and raises fundamental questions about the shape of American literary history as it has been constructed in the academy.

The Great Race Levi Tillemann, 2016-01-19 The Great Race recounts the exciting story of a century-long battle among automakers for market share, profit, and technological dominance—and the thrilling race to build the car of the future. The world’s great manufacturing juggernaut—the \$3 trillion automotive industry—is in the throes of a revolution. Its future will include cars Henry Ford and Karl Benz could scarcely imagine. They will drive themselves, won’t consume oil, and will come in radical shapes and sizes. But the path to that future is fraught. The top contenders are two traditional manufacturing giants, the US and Japan, and a newcomer, China. Team America has a powerful and little-known weapon in its arsenal: a small group of technology buffs and regulators from California. The story of why and how these men and women could shape the future—how you move, how you work, how you live on Earth—is an unexpected tale filled with unforgettable characters: a scorned chemistry professor, a South African visionary who went for broke, an ambitious Chinese ex-pat, a quixotic Japanese nuclear engineer, and a string of billion-dollar wagers by governments and corporations. “To explain the scramble for the next-generation auto—and the roles played in that race by governments, auto makers, venture capitalists, environmentalists, and private inventors—comes Levi Tillemann’s *The Great Race*...Mr. Tillemann seems ideally cast to guide us through the big ideas percolating in the world’s far-flung workshops and labs” (The Wall Street Journal). His account is incisive and riveting, explaining how America bounced back in this global contest and what it will take to command the industrial future.

Government Impact on Sustainable and Responsible Supply Chain Management Taghipour, Atour, 2023-07-19 A supply chain comprises different actors existing in different countries, including suppliers, producers, and customers. Clothes are supplied from Asia to all other regions; most coffee beans are supplied from South America; and cocoa is produced in Africa. Protecting the rights of people who produce goods in different countries is essential. In fact, according to this evolutionary law, companies need to identify, analyze, and prioritize the risks in their supply chains, and new policies must be established based on these results. New measures are taken to prevent or minimize violations of human rights and damage to the environment. Companies also need to set up grievance channels for people in the supply chains for regular reporting on supply chain practices. The German Supply Chain Act gives consumers the security that companies are managed based on fair production, and many similar legislations are likely to follow in other nations. Businesses around the world must prepare for these types of policies to impact their own supply chain management strategy before they are enforced if they wish to avoid revenue-impacting delays. *Government Impact on Sustainable and Responsible Supply Chain Management* is edited by Atour Taghipour, with about a decade of experience as a director in Automobile and High-Tech Industries, provides new and innovative ways to integrate social and environmental analysis into global value chains and adapt the law that regulates corporate responsibility for the observance of sustainability and human rights in the supply chain. This book is ideal for professionals and researchers working in governmental and private organizations in supply chain management, operations management, logistics, and operations research. Moreover, the book provides insights and support for executives in managing expertise, knowledge, information, and organizational development in different work communities and environments.
