Our vanishing relative Rijksen,2013-12-01 The orang-utan is a superb representative of a major sector of the structure of biological diversity in Sumatra and Borneo. Conservation of the living conditions of the orang-utan implies maintaining the integrity of the entire natural ecosystem of indigenous plant and animal species known as the West Malesian rainforest, i.e. the natural tropical evergreen forests of distinctive floral composition which stretch from the isthmus of Kra, in Thailand, across peninsular West Malaysia, south and eastwards, including Sumatra, Borneo and Java. The main question behind this study is: What is the current status of the orang-utan? Or in other words: • what is the current geographical distribution range? • what have been the trends in the size of its range and numbers? • to what extent is this range covered by (a) conservation areas, (b) timber concessions (i.e. modified habitat) and (c) plans for conversion (i.e. obliteration of the habitat)? • what is the current quality of habitat in this range and what is the prospect for conservation or restoration of such habitat? • what is a plausible average density of the ape in such habitat? • what are the prospects for protection of the ape? • what should and can be done to give the ape a chance of survival? Several actions were undertaken to find answers to these questions, and the major results are: • In Sumatra the orang-utan has a much more extensive range than was hitherto

Face to Face with Orangutans Tim Laman,Cheryl Denise Knott,2009 Describes the orangutan of Borneo in its natural habitat, including information on the threats that now face this incredible primate.

Orang-utan Suzi Eszterhas,2013 High in the trees of the rainforest in Sumatra, a baby orang-utan is born. Follow her from birth to adulthood, as she learns to look after herself. See her eating her first solid food - mashed fruit , learning to climb, and relaxing in the nest. She will stay with her mum, learning how to survive in the forest, until she is five years old. Orang-Utan Baby Monica Hughes,2006 Read about the everyday life of a young orang-utan growing up in the rainforest. What do orang-utans look like? What do they eat? Where do they sleep? A Q&A section is included to test the reader's comprehension and to encourage further discussion of the subject matter.

Orang-Utan Family Monica Hughes,2008 I love reading series is a unique new series of exciting, informative graded non-fiction readers for children aged 5-7 years.

The Queen's Orang-Utan David Walliams,2015-02-26 Written exclusively for

Comic Relief 2015 by David Walliams. From Number One bestselling picture book duo, David Walliams and Tony Ross, comes this spectacularly funny story for children of 3 and up.

Orange Orangutan Mister Figg, 2019-06-10 After school, a child sees an orange orangutan doing something that is odd. He goes to find out the reason for the orangutan's actions and ends up in a walk to discover why other animals are also doing things that they don't normally do. Join in and find the answer. Picture book that is illustrated in FULL COLOR. For ages 4 and up.

The Neglected Ape Biruté M.F. Galdikas, R.D. Nadler, N. Rosen, Lori K. Sheeran, 2013-11-11 The orangutan is the most highly endangered species of great ape. Orangutans are threatened by deforestation, poaching, the illegal pet trade, and the isolation and fragmentation of dwindling wild populations. Their conservation is impeded by certain aspects of their ecology (e. g. , a rain forest habitat) and certain features of their life history (e. g. , an eight-to twelve-year interbirth interval). Added to the U. S. Endangered Species List in 1970, the orangutan is now clearly on the road to extinction. The number of wild orangutans in Borneo and Sumatra is currently estimated to have decreased to between 12,300 and 20,571 individuals. Only 2% of original orangutan habitat is protected and some of these areas are now being destroyed. Clearly, attention to ecology, demography, censusing, rehabilitation, and conservation is essential if the orangutan is to survive in the wild beyond the next century. The protection of orangutans is a complex, multifaceted problem, involving such pressing issues as human poverty, overpopulation, and the economic development of Southeast Asia. Although the orangutan has been placed in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), more orangutans were sold illegally in Taiwan between 1990 and 1993 than are housed in all the world's zoos. In the past, scientific and public attention has centered on the African apes. For this reason, the sole Asian great ape, the orangutan, has been called the neglected ape.

Orang-utans Junaidi Payne, Cede Prudente, 2008 Whales and dolphins (Cetaceans) have captivated and intrigued humankind for centuries. They are incredibly diverse and have evolved a fascinating range of specializations to allow them, despite being air-breathing mammals, to exploit habitats ranging from the surface waters to the abyssal depths. Whales and Dolphins of the World is a stunningly illustrated celebration of their variety - there are over 80 species - behaviour and natural history. It describes what we know of their lives such as feeding, reproduction, communication and social structures, and outlines the factors that affect them, from hunting to pollution. The strong relationship between our species and theirs is also considered, with a look at dolphin therapy, as are the pros and cons of whale- and dolphin-watching and what makes a good trip. A map of the world highlights the waters in which these mammals are found.

Orangutans and Their Battle for Survival Leif Cocks, 2002 With the arrival of European explorers in Southeast Asia around 300 years ago, the orangutan - the world's second-largest ape and one of our closest biological relatives - began a battle for survival. As the rainforest was cleared and burnt, and the orangutans were poached and sold, remnant populations have dwindled to

alarmingly small numbers. This is the amazing story of how a small Australian zoo offers hope for the orangutans, through its very successful captive breeding program. The story is told through the eyes and heart of Leif Cocks, whose personal encounters with the orangutans in his care have enabled him to provide fascinating insights into their unique intelligence and individual personalities. The photographs capture some wonderful moments in the orangutan enclosures at the zoo.

The Last Stand of the Orangutan United Nations Environment Programme, 2007
This publication has been carried out on behalf of the Great Ape Survival Partnership (GRASP), established by UNEP and UNESCO in collaboration with a wide range of non-governmental organisations in response to growing concern over the plight of the orangutan, the chimpanzee, the bonobo and the gorilla. The report used the latest satellite imagery and data from the Government of Indonesia to assess changes in the forests of one part of south-east Asia. The results indicate that illegal logging, fires and the plantation of crops such as palm oil are intruding extensively into Indonesia's national parks, the last safehold of the orangutan. The orangutans share this habitat with a wild range of other threatened and ecologically important species including the Sumatran tiger, Sumatran rhinoceros and Asian elephant.

Orang-utan, Malaysia's Mascot Junaidi Payne, Mahedi Andau, 1989

Wild Man from Borneo Robert Cribb, Helen Gilbert, Helen Tiffin, 2014-01-31
Wild Man from Borneo offers the first comprehensive history of the human-orangutan encounter. Arguably the most humanlike of all the great apes, particularly in intelligence and behavior, the orangutan has been cherished, used, and abused ever since it was first brought to the attention of Europeans in the seventeenth century. The red ape has engaged the interest of scientists, philosophers, artists, and the public at large in a bewildering array of guises that have by no means been exclusively zoological or ecological. One reason for such a long-term engagement with a being found only on the islands of Borneo and Sumatra is that, like its fellow great apes, the orangutan stands on that most uncomfortable dividing line between human and animal, existing, for us, on what has been called "the dangerous edge of the garden of nature." Beginning with the scientific discovery of the red ape more than three hundred years ago, this work goes on to examine the ways in which its human attributes have been both recognized and denied in science, philosophy, travel literature, popular science, literature, theatre, museums, and film. The authors offer a provocative analysis of the origin of the name "orangutan," trace how the ape has been recruited to arguments on topics as diverse as slavery and rape, and outline the history of attempts to save the animal from extinction. Today, while human populations increase exponentially, that of the orangutan is in dangerous decline. The remaining "wild men of Borneo" are under increasing threat from mining interests, logging, human population expansion, and the widespread destruction of forests. The authors hope that this history will, by adding to our knowledge of this fascinating being, assist in some small way in their preservation.
