

Orangutan

Rachel Smith,John Davidson

Face to Face with Orangutans Tim Laman, Cheryl Denise Knott, 2009 Describes the orangutan of Borneo in its natural habitat, including information on the threats that now face this incredible primate.

Orangutans Buffy Silverman, 2012 Introduces orangutans, describing their behavior, habitat, life cycle, eating habits, and the threats they face from deforestation and poaching.

Orangutans and Their Battle for Survival Leif Cocks, 2002 With the arrival of European explorers in Southeast Asia around 300 years ago, the orangutan - the world's second-largest ape and one of our closest biological relatives - began a battle for survival. As the rainforest was cleared and burnt, and the orangutans were poached and sold, remnant populations have dwindled to alarmingly small numbers. This is the amazing story of how a small Australian zoo offers hope for the orangutans, through its very successful captive breeding program. The story is told through the eyes and heart of Leif Cocks, whose personal encounters with the orangutans in his care have enabled him to provide fascinating insights into their unique intelligence and individual personalities. The photographs capture some wonderful moments in the orangutan enclosures at the zoo.

Among the Orangutans Evelyn Gallardo, 1993-03 Describes the life and research of Birute Galdikas, prominent expert on the behavior of orangutans in the wild.

Being an Orangutan Mary Molly Shea, Michael Sabatino, 2013-12-30 Introduces orangutans, describing their physical characteristics, habitat, diet, and how they build their beds each night and use sticks to forage for food.

Project Orangutan Susan Ring, 2003 Showcases the development and growth of a baby orangutan at the Memphis Zoo, discussing the zookeeper's role in its life and the natural habitat, foods, and life cycle of the animal.

Orangutans Serge A. Wich, Suci Utami Atmoko, Tatang Mitra Setia, Carel P. van Schaik, 2010-01-07 This book describes one of our closest relatives, the orangutan, and the only extant great ape in Asia. It is increasingly clear that orangutan populations show extensive variation in behavioural ecology, morphology, life history, and genes. Indeed, on the strength of the latest genetic and morphological evidence, it has been proposed that orangutans actually constitute two species which diverged more than a million years ago - one on the island of Sumatra the other on Borneo, with the latter comprising three subspecies. This book has two main aims. The first is to carefully compare data from every orangutan research site, examining the differences and similarities between orangutan species, subspecies and populations. The second is to develop a theoretical framework in which these differences and similarities can be explained. To achieve these goals the editors have assembled the world's leading orangutan experts to rigorously synthesize and compare the data, quantify the similarities or differences, and seek to explain them. *Orangutans* is the first synthesis of orangutan biology to adopt this novel, comparative approach. It analyses and compares the latest data, developing a theoretical framework to explain morphological, life history, and behavioural variation. Intriguingly, not all behavioural differences can be attributed to ecological variation between and within the two islands; relative rates of social learning also appear to have been influential. The book also emphasizes the crucial impact of human settlement on orangutans and looks ahead to the future prospects for the survival of critically endangered natural populations.

Wattana Chris Herzfeld, 2016-05-02 She likes tea, sews, draws on papers and is a self-taught master of tying and untying knots. But she is not a crafty woman of the DIY set: she is Wattana, an orangutan who lives in the Jardin des Plantes Zoo in Paris. And it is in Paris where Chris Herzfeld first encounters and becomes impressed by Wattana and her exceptional abilities with knots. In *Wattana: An Orangutan in Paris* Herzfeld tells not only Wattana's fascinating story, but also the story of orangutans and other primates—including bonobos, chimpanzees, and gorillas—in captivity. Offering a uniquely intimate look at the daily lives of captive great apes, Herzfeld uses Wattana's life to trace the history of orangutans from their first arrival in Europe in 1776 to the inhabitants of the Zoo of Paris and other zoos today. She provides a close look at the habits, technical know-how, and skills of Wattana, who, remarkably, uses strings, paper rolls, rope, and even pieces of wood to make things. And she thoughtfully explores how apes individually—and often with ingenuity—come to terms with and adapt to their captive environments and caretakers. Through these stories, Wattana sympathetically reveals the extraordinary psychology and distinctive personalities of great apes as well as the interconnections between animal and human lives, especially in zoos. Scientists predict that orangutans will disappear from the wild by 2030, and captive animals like Wattana may, as a result, provide our best chance to understand and appreciate their astonishing intelligence and abilities. Wattana, the accomplished maker of knots, is the hero of this poignant book, which will enthrall anyone curious about the lives of our primate cousins.

Orangutans For Kids Rachel Smith, John Davidson, 2015-12-21 Table of Contents Introduction What is an orangutan? How do orangutans act? The history of orangutans and humans Orangutans and culture Orangutans and conservation Conclusion Author Bio Publisher Introduction The orangutan is probably one of the more fascinating apes in existence. Less people know a lot about it compared to animals like the chimpanzee and the gorilla, but they certainly have their own charms. A red ape with very long arms, the orangutan looks kind of silly. But it has intelligence that surpasses its appearance, and has fascinated scientists and storytellers alike for centuries.

The Orangutan Katesalin Pagkaihang, 2017-06-28 Heart warming photos and lovely story of orangutans in the wild.

Orangutan Orphans Clare Hibbert, 2014-12-15 Orangutans are threatened by the loss of their rainforest habitats and their popularity among illegal pet traders. These things leave many orangutans orphaned. However, there are many organizations that have created centers to help these orphaned animals. Readers explore different careers available for those who want to help orangutans, and they also learn amazing facts about these playful animals. Fact boxes and vibrant photographs hold readers' attention as they learn. Centers devoted to the care of orangutans are very important to the balance in rainforest ecosystems, and readers discover exactly why in this volume.

Orange Orangutan Mister Figg, 2019-06-10 After school, a child sees an orange orangutan doing something that is odd. He goes to find out the reason for the orangutan's actions and ends up in a walk to discover why other animals are also doing things that they don't normally do. Join in and find the answer. Picture book that is illustrated in FULL COLOR. For ages 4 and up.

The Last Stand of the Orangutan United Nations Environment Programme, 2007 This publication has been carried out on behalf of the Great Ape

Survival Partnership (GRASP), established by UNEP and UNESCO in collaboration with a wide range of non-governmental organisations in response to growing concern over the plight of the orangutan, the chimpanzee, the bonobo and the gorilla. The report used the latest satellite imagery and data from the Government of Indonesia to assess changes in the forests of one part of south-east Asia. The results indicate that illegal logging, fires and the plantation of crops such as palm oil are intruding extensively into Indonesia's national parks, the last safehold of the orangutan. The orangutans share this habitat with a wild range of other threatened and ecologically important species including the Sumatran tiger, Sumatran rhinoceros and Asian elephant.

Orangutan David Orme,2005 Introduction to orangutans and the reasons that their numbers have been declining.

Orangutans Marjorie B. Shaw,John Bonnett Wexo,1993-03 Describes the physical characteristics, habitat, life cycle, and daily activities of this human-like animal.

The Neglected Ape Biruté M.F. Galdikas,R.D. Nadler,N. Rosen,Lori K. Sheeran,2013-11-11 The orangutan is the most highly endangered species of great ape. Orangutans are threatened by deforestation, poaching, the illegal pet trade, and the isolation and fragmen tation of dwindling wild populations. Their conservation is impeded by certain aspects of their ecology (e. g. , a rain forest habitat) and certain features of their life history (e. g. , an eight-to twelve-year interbirth interval). Added to the U. S. Endangered Species List in 1970, the orangutan is now clearly on the road to extinction. The number of wild orangutans in Borneo and Sumatra is currently estimated to have decreased to between 12,300 and 20,571 individuals. Only 2% of original orangutan habitat is protected and some of these areas are now being destroyed. Clearly, attention to ecology, demography, censusing, rehabilitation, and conservation is essential if the orangutan is to survive in the wild beyond the next century. The protection of orangutans is a complex, multifaceted problem, involving such pressing issues as human poverty, overpopulation, and the economic development of Southeast Asia. Although the orangutan has been placed in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), more orangutans were sold illegally in Taiwan between 1990 and 1993 than are housed in all the world's zoos. In the past, scientific and public attention has centered on the African apes. For this reason, the sole Asian great ape, the orangutan, has been called the neglected ape.

The Orangutans Gisela Kaplan,Lesley J. Rogers,2000-06-21 An intimate look at the most humanlike primates on the face of the Earth.

The Supersmart Orangutan Mari Schuh,2018-08-01 Orangutans use sticks as tools and communicate using at least 32 different sounds! Readers will discover this and more, including how orangutans build themselves amazing nests in their forest homes.

Each features an endangered species: grizzly bear, orangutan, harp seal, and snow leopard.
