*Sts-27r Ov-104 Orbiter Tps Damage Review Team National Aeronautics and Space Adm*

Nasa,2018-11-12 Following the return to earth on December 2, 1988, of Orbiter OV-104, Atlantis, it was observed that there was substantial Thermal Protection System (TPS) tile damage present on the lower right fuselage and wing. Damage sites were more numerous than on previous flights and conversely, there was almost no damage present on Atlantis' left side. A review team investigated the cause beginning with a detailed inspection of the Atlantis TPS damage, and a review of related inspection reports to establish an indepth anomaly definition. An exhaustive data review followed. A fault tree and several failure scenarios were developed. Finally, the failure scenarios were categorized as either not possible, possible but not probable, or probable. This and other information gained during the review formed the basis for the team's findings and recommendations. The team concluded that the most probable cause of the severe STS-27R Orbiter tile damage is that the ablative insulating material covering the RH SRB Nose Cap dislodged and struck the Orbiter tile near 85 seconds into flight and possibly that debris from other sources, including repaired insulation and missing joint cork, caused minor tile damage. Findings are presented, and recommendations that are believed pertinent to minimizing the potential for inflight debris are described. Thomas, John W. (Compiler) Marshall Space Flight Center...

**Enhancing Hubble's Vision** David J. Shayler,David M. Harland,2015-11-25 This book tells the story of the four missions to maintain Hubble's successful operation. Between 1997 and 2009 these repaired, serviced and upgraded the instruments on the telescope to maintain its state-of-the-art capabilities. It draws on first hand interviews with those closely involved in the project. The spacewalking skills and experiences gained from maintaining and upgrading Hubble had direct application to the construction of the International Space Station and help with its maintenance. These skills can be applied to future human and robotic satellite servicing and maintenance activities as well, not only in Earth orbit but at locations deeper in space. A companion to this book, *The Hubble Space Telescope: From Concept to Success*, relates the events of the Telescope's launch in 1990 and its

rough start, after a 20-year struggle to place a large optical telescope in orbit. Originally intended to operate for fifteen years, Hubble has just passed its 25th anniversary, and there is every expectation that it will survive for thirty years. Despite its early problems, the Hubble Space Telescope has become a lasting legacy of the Space Shuttle program, and indeed is a national treasure.

**Spacelab Payloads** Michael E. Haddad, David J. Shayler, 2022-01-22 Spacelab was a reusable laboratory facility that was flown on the Space Shuttle from 1983 to 1998. Completing 22 major missions and contributing to many other NASA goals, Spacelab stands as one of the Shuttle program's most resounding successes. The system comprised multiple components, including a pressurized laboratory module, unpressurized carrier pallets and other related hardware, all housed in the Shuttle's Payload Bay and crew compartment. But how did all those varied components actually come together? The answer is the little-known "Level-IV", a team of managers and engineers who molded separate elements of hardware into cohesive and safe payloads. Without the dedication and drive of the Level-IV team, the huge successes of the Spacelab missions would not have been achieved. This is their story. You will learn herein how Level-IV was formed, who was involved, and the accomplishments, setbacks and problems faced along the way, in a story that blends both the professional and personal sides of Level-IV operations and its legacy. Upon reading this book, you will gain a new appreciation for this crucial team and understand what is meant when you hear the term "Level-IV".

**Linking the Space Shuttle and Space Stations** David J. Shayler, 2017-06-27 How could the newly authorized space shuttle help in the U.S. quest to build a large research station in Earth orbit? As a means of transporting goods, the shuttle could help supply the parts to the station. But how would the two entities be physically linked? Docking technologies had to constantly evolve as the designs of the early space stations changed. It was hoped the shuttle would make missions to the Russian Salyut

and American Skylab stations, but these were postponed until the Mir station became available, while plans for getting a new U. S. space station underway were stalled. In *Linking the Space Shuttle and Space Stations*, the author delves into the rich history of the Space Shuttle and its connection to these early space stations, culminating in the nine missions to dock the shuttle to Mir. By 1998, after nearly three decades of planning and operations, shuttle missions to Mir had resulted in:

- A proven system to link up the space shuttle to a space station
- Equipment and hands-on experience in handling tons of materials
- An infrastructure to support space station assembly and resupply

Each of these played a pivotal role in developing the skills and procedures crucial to the creation of the later, much larger and far more complex International Space Station, as described in the companion volume *Assembling and Supplying the ISS: The Space Shuttle Fulfills Its Mission*.

*Warships of the Soviet Fleets 1939–1945* Przemyslaw Budzbon, Jan Radziemski, Marek Twardowski, 2022-12-12

Seventy-five years after the end of the Second World War the details of Soviet ships, their activities and fates remain an enigma to the West. In wartime such information was classified and after a brief period of glasnost ('openness') the Russian state has again restricted access to historical archives. Therefore, the value – and originality – of this work is difficult to exaggerate. It sees the first publication of reliable data on both the seagoing fleets and riverine flotillas of the Soviet Navy, listing over 6200 vessels from battleships to river gunboats, and mercantile conversions as well as purpose-built warships. This second part of the three-volume series includes all the remaining fighting vessels not already covered in Volume I. Beginning with the Uragan class – rated as Escort Ships and the first seagoing warships designed by the Soviet Union – the book then moves on to Submarine Hunters, both large and small, Patrol craft, Minelayers and Minesweepers, and unusual types like Floating Artillery Batteries and Anti-Aircraft Defense Ships, concluding with Landing Ships and Craft. Many of these vessels have hitherto been poorly documented but given the nature of the land-centered Soviet war against Germany their contribution should not be underestimated. The details of their service and, not least, the circumstances of their loss, constitute a major addition to Western understanding of the Soviet Navy's war effort. This is undoubtedly one of the most important naval reference works of recent years and will be welcomed by anyone with an interest in warships, the Soviet Navy or wider maritime aspects of the Second World War. Furthermore, as recent Russian actions appear to revive Soviet-era aspirations, this book offers both new insights and valuable background of contemporary relevance.
