*The Age of Orion* David Reade, 1998 The Age of Orion is the first book devoted solely to the development and operational use of the illustrious USN maritime patrol and anti-submarine hunting aircraft the Lockheed P-3 Orion. David Reade details for the first time the complete history and walks you through all the different models, versions and variants. The book authoritatively establishes the Orion's different configurations, roles and missions it performs, as well as describes its endless array of capabilities currently and into the future. Besides chronicling all of its international operators, and their future upgrade programs, The Age of Orion contains comprehensive and informative appendices, charts, graphs, and impressive illustrated Bureau Number Aircraft Location listing of every P-3 Orion in the world - this list is packed with additional historical data on any particular P-3 Orion. Over 280 color photographs illustrate all of the various U.S. Navy and foreign markings during the aircraft's thirty-plus year history.

*The Minimal Polynomials of Unipotent Elements in Irreducible Representations of the Classical Groups in Odd Characteristic* Irina D. Suprunenko, 2009-06-05 The minimal polynomials of the images of unipotent elements in irreducible rational representations of the classical algebraic groups over fields of odd characteristic are found. These polynomials have the form  $(t-1)^d$  and hence are completely determined by their degrees. In positive characteristic the degree of such polynomial cannot exceed the order of a relevant element. It occurs that for each unipotent element the degree of its minimal polynomial in an

irreducible representation is equal to the order of this element provided the highest weight of the representation is large enough with respect to the ground field characteristic. On the other hand, classes of unipotent elements for which in every nontrivial representation the degree of the minimal polynomial is equal to the order of the element are indicated. In the general case the problem of computing the minimal polynomial of the image of a given element of order  $p^a$  in a fixed irreducible representation of a classical group over a field of characteristic  $p > 2$  can be reduced to a similar problem for certain  $p$ -unipotent elements and a certain irreducible representation of some semisimple group over the field of complex numbers. For the latter problem an explicit algorithm is given. Results of explicit computations for groups of small ranks are contained in Tables I-XII. The article may be regarded as a contribution to the programme of extending the fundamental results of Hall and Higman (1956) on the minimal polynomials from  $p$ -solvable linear groups to semisimple groups.

**Thermal Quantum Field Theory** F. C. Khanna, 2009 This monograph presents recent developments in quantum field theory at finite temperature. By using Lie groups, ideas from thermal theory are considered with concepts of symmetry, allowing for applications not only to quantum field theory but also to transport theory, quantum optics and statistical mechanics. This includes an analysis of geometrical and topological aspects of spatially confined systems with applications to the Casimir effect, superconductivity and phase transitions. Finally, some developments in open systems are also considered. The book provides a unified picture of the fundamental aspects in thermal quantum field theory and their applications, and is important to the field as a result, since it combines several diverse ideas that lead to a better understanding of different areas of physics.

**Banjo Roots and Branches** Robert B Winans, 2018-07-30 The story of the banjo's journey from Africa to the western hemisphere blends music, history, and a union of cultures. In *Banjo Roots and Branches*, Robert B. Winans presents cutting-edge scholarship that covers the instrument's West African origins and its adaptations and circulation in the Caribbean and United States. The contributors provide detailed

ethnographic and technical research on gourd lutes and ekonting in Africa and the banza in Haiti while also investigating tuning practices and regional playing styles. Other essays place the instrument within the context of slavery, tell the stories of black banjoists, and shed light on the banjo's introduction into the African- and Anglo-American folk milieus. Wide-ranging and illustrated with twenty color images, *Banjo Roots and Branches* offers a wealth of new information to scholars of African American and folk musics as well as the worldwide community of banjo aficionados. Contributors: Greg C. Adams, Nick Bamber, Jim Dalton, George R. Gibson, Chuck Levy, Shlomo Pestcoe, Pete Ross, Tony Thomas, Saskia Willaert, and Robert B. Winans.

**Cell-to-Cell Mapping** C.S. Hsu,2013-03-09 For many years, I have been interested in global analysis of nonlinear systems. The original interest stemmed from the study of snap-through stability and jump phenomena in structures. For systems of this kind, where there exist multiple stable equilibrium states or periodic motions, it is important to examine the domains of attraction of these responses in the state space. It was through work in this direction that the cell-to-cell mapping methods were introduced. These methods have received considerable development in the last few years, and have also been applied to some concrete problems. The results look very encouraging and promising. However, up to now, the effort of developing these methods has been by a very small number of people. There was, therefore, a suggestion that the

published material, scattered now in various journal articles, could perhaps be pulled together into book form, thus making it more readily available to the general audience in the field of nonlinear oscillations and nonlinear dynamical systems. Conceivably, this might facilitate getting more people interested in working on this topic. On the other hand, there is always a question as to whether a topic (a) holds enough promise for the future, and (b) has gained enough maturity to be put into book form. With regard to (a), only the future will tell. With regard to (b), I believe that, from the point of view of both foundation and methodology, the methods are far from mature.

*Chiefs of Industry* Hazel Petrie, 2013-10-01 Drawing on a wide range of sources in both English and Maori, this study explores the entrepreneurial activity of New Zealand's indigenous Maori in the early colonial period. Focusing on the two industries—coastal shipping and flourmilling—where Maori were spectacularly successful in the 1840s and 1850s, this title examines how such a society was able to develop capital-intensive investments and harness tribal ownership quickly and effectively to render commercial advantages. A discussion of the sudden decline in the “golden age” of Maori enterprise—from changing market conditions, to land alienation—is also included.

**Ramanujan's Notebooks** Bruce C. Berndt, 2012-12-06 Upon Ramanujan's death in 1920, G. H. Hardy strongly urged that Ramanujan's notebooks be published and edited. In 1957, the Tata Institute of Fundamental Research in Bombay finally published a photostat edition of the notebooks, but no editing was undertaken. In 1977, Berndt began the task of editing Ramanujan's notebooks: proofs are provided to theorems not yet proven in previous literature, and many results are so startling as to be unique.

American Zouaves, 1859-1959 Daniel J. Miller, 2019-12-26 The elite French Zouaves, with their distinctive, colorful uniforms, set an influential example for volunteer soldiers during the Civil War and continued to inspire American military units for a century. Hundreds of militia companies adopted the flamboyant uniform to emulate the gallantry and martial tradition of the Zouaves. Drawing on fifty years of research, this volume provides a comprehensive state-by-state catalog of American Zouave units, richly illustrated with rare and previously unpublished photographs and drawings. The author dispels many misconceptions and errors that have persisted over the last 150 years.

**A History of Canadian Accounting Thought and Practice** George J. Murphy, 2020-09-04 This book, first published in 1993, focuses on the evolution of accounting institutions, practices and standard-setting in

Canada. Canada's federal system complicates the jurisdictional authority for accounting matters. The Canadian constitution empowers the ten provinces to regulate the training and certification of accountants, and each can incorporate organizations. A great deal of effort has been made by accounting bodies on jurisdictional coordination and disputes, and this book analyses how these systems have come to function in their present form.
