P-47 Thunderbolt at War Cory Graff,

P-47 Thunderbolt Units of the Twelfth Air Force Jonathan Bernstein,2012-08-20 The P-47 Thunderbolt, originally designed as a high-altitude interceptor, became the principal US fighter-bomber of World War II. First adapted to the ground attack role by units of the Twelfth Air Force in early 1944, the strength and durability of the P-47 airframe, along with its massive size, earned it the nickname 'Juggernaut', which was quickly shortened to 'Jug' throughout the MTO and ETO. By October 1943, with the creation of the Fifteenth Air Force, nearly half of the Twelfth's fighter groups would be retasked with strategic escort missions, leaving six groups to perform close air support and interdiction missions throughout the entire Mediterranean theatre. The groups inflicted incredible damage on the enemy's transport routes in particular, using rockets, bombs, napalm and machine-gun rounds to down bridges, blow up tunnels and strafe trains. Myriad first-hand accounts and period photography reveal the spectacular success enjoyed by the Thunderbolt in the MTO in the final year of the war.

Modelling the P-47 Thunderbolt Brett Green,2012-04-20 The P-47 Thunderbolt, affectionately nicknamed the 'Jug', was one of the most famous fighter aircraft of World War II. Used as both a high-altitude escort fighter and a low-level fighter-bomber, it quickly gained a reputation for being tough and resilient. Many different air forces operated this plane, and it sported a wide range of camouflage schemes, finishes and markings, including stunning nose art. Modellers have been well served with Thunderbolt kits over the years, right up to the latest highly accurate releases. This book takes a step-by-step approach to modelling a wide variety of P-47 types in 1/48-scale, from 'Razorbacks' in USAAF colours to RAF T-bolts in the Far East. It provides expert advice on conversions (including a Bubbletop to a P-47M), adding aftermarket items, detailing, and ways to achieve top quality weathering and finishes.

P-47 Thunderbolt vs German Flak Defenses Jonathan Bernstein,2021-10-28 Since the end of World War 2, the tactical air war over Europe has been largely overlooked by historians and authors alike in favour of analysis of the higher profile strategic bombing campaign. Involving just as many aircraft as the daylight heavy bombing campaign, the fighter-bombers (principally of the Ninth Air Force) wreaked considerably more havoc on German ground forces. Indeed, Thunderbolt units undertaking such missions effectively complemented the strategic campaign, ensuring the defeat of Nazi Germany. P-47 pilots paid a high price to achieve this victory, however, as the German flak arm was well equipped (nearly a quarter of all war-related production was devoted to anti-aircraft weaponry) with weapons of various calibres to counter tactical air power's low to medium altitude threat. The USAAF four numbered air forces that saw action over the European continent suffered significant fighter-bomber losses to flak. The principle fighter-bomber from the summer of 1944 through to VE Day was the P-47D, with both dedicated ground attack units and squadrons that had completed their bomber escort tasking seeking out targets of

opportunity across occupied Western Europe. While heavy-calibre anti-aircraft fire was intended to both shoot down enemy aircraft and force bombers to drop their ordnance sooner or from higher altitudes, thus reducing bombing accuracy, low-altitude flak batteries put up a virtual 'wall of steel' for enemy fighter-bombers to fly through. Damaging a low-flying fighter-bomber made it easier for other flak gunners to track, engage and destroy it. Innovations like lead-computing gunsights gave gunners a higher probability of intercepting low-altitude fighters. Conversely, the appearance of air-to-ground rockets beneath the wings of P-47s gave pilots better standoff range and a harder-hitting punch when dealing with low and medium altitude flak units. This volume analyses the tactics and techniques used by both P-47 fighter-bomber pilots and German flak gunners, featuring full-colour illustrations to examine the Allied tactical air power in Europe from 1943 and how German defences were overpowered by the air threat.

Republic P-47 Thunderbolt Tomasz Szlagor, Leszek Wieliczko, 2010-01-05 * Free 1:48 and 1:72 decals and masking foil The last, fourth part of a monograph on P-47 Thunderbolt discusses its combat use as fighter-bomber in Western Europe during the last few months of WW2. The air battles over Southern Europe in 1944-1945 are also thoroughly described. Another chapter is devoted to Thunderbolt's service in the RAF, the Free French AF, the Brazilian AF, the Mexican AF and the Chinese AF together with other foreign operators. The author uncovers the fates of particular fighter units as well as individual pilots who fought in them. The book includes technical data and lists of units operating the P-47. Free 1:48 and 1:72 decals for 3 schemes: P-47D-30-RA (s/n 44-33721) of Escuadron Aereo de Pelea 201, July 1945. P-47D-30-RE of the Columbian Air Force. P-47 Thunderbolt Aces of the Ninth and Fifteenth Air Forces Jerry Scutts, 1999-12-01 This book charts the story of the lesser known aces who flew the mighty Republic aircraft as a tactical fighter-bomber with the Ninth Air Force, rather than as a long-range escort. It also details the exploits of the Mediterranean-based 325th FG, which was the only P-47 group within the strategic Fifteenth Air Force. Thunderbolt aces within the Ninth Air Force, particularly, were rare, despite some 15 groups flying the fighter. Supporting troops on the ground rather than searching out aerial foes, was the name of the game for the men of the Ninth. However, with the Luftwaffe often opposing such sorties through to April 1945, more than 20 pilots had the opportunity to score five or more kills and 'make ace'.

P-47 Thunderbolt Pilot's Flight Operating Manual Periscope Film Com,2006-06-12 Known as the Jug because of its fuselage shape, the Republic P-47 Thunderbolt flew in every theatre of WWII except Alaska. Nearly 13,000 were built by war's end. The large aircraft carrier eight Browning machine guns and up to 2,000 lbs. of bombs or rockets, and proved an effective fighter and bomber. The radial Pratt and Whitney powerplant put out over 2500 h.p. and propelled the P-47 at a maximum speed of 426 mph at 30,000 feet. Originally published by the U.S. Army Air Force, this handbook taught pilots everything they needed to know before entering the cockpit. This affordable facsimile of a real WWII manual has been reformatted. Care has been taken to preserve the integrity of the text.

Angels Zero Robert Brulle,2015-09-29 Robert V. Brulle, who flew seventy ground support missions with the 366th Fighter Group, links his daily experiences in the cockpit not only with the battles in which he participated but also with events in the wider European theater. Combining anecdotes from his personal diary, research in US and German records, and interviews with participants from both sides, Brulle details a combat career that began just after D-Day, when he flew column cover for Allied troops as they chased the German military out of France. He then describes the brutal, six-week Hürtgen Forest campaign, during which his fighter group lost 15 pilots and 18 aircraft. He also tells how the otherwise bitterly fought Battle of the Bulge provided the 366th with an opportunity to successfully engage 60 Luftwaffe airplanes in a dogfight directly over their airfield. Angels Zero combines both personal and historical detail to vividly re-create a lesser-known aspect of the air war in Europe.

P-47 Thunderbolt Aces of the Eighth Air Force Jerry Scutts,1998-10-30 The US aviation industry produced three great fighter designs to equip its burgeoning army air force during World War 2, and of this trio, Republic's P-47 Thunderbolt was easily the heaviest. Powered, crucially, by a turbocharged Pratt & Whitney R-2800 Double Wasp radial engine that produced 2000 hp, the first production fighters reached the 56th FG in June 1942, and six months later the group joined the Eighth Air Force in Britain. The arrival of the first P-47Cs in mid-1943 addressed the problem of the aircraft's short combat radius, as this model could be fitted with an external tank. Slowly, as combat tactics evolved in units like the 56th and 78th FGs, pilots learnt how best to fly the Thunderbolt in order to effectively counter the more nimble Luftwaffe fighters.

P-47D Thunderbolt vs Ki-43-II Oscar Michael John Claringbould,2020-07-23 Although New Guinea's Thunderbolt

pilots faced several different types of enemy aircraft in capricious tropical conditions, by far their most common adversary was the Nakajima Ki-43-II Hayabusa, codenamed 'Oscar' by the Allies. These two opposing fighters were the products of two radically different design philosophies. The Thunderbolt was heavy, fast and packed a massive punch thanks to its battery of eight 0.50-cal machine guns, while the 'Oscar' was the complete opposite in respect to fighter design philosophy – lightweight, nimble, manoeuvrable and lightly armed. It was, nonetheless, deadly in the hands of an experienced pilot. The Thunderbolt commenced operations in New Guinea with a series of bomber escort missions in mid-1943, and its firepower and superior speed soon saw Fifth Air Force fighter command deploying elite groups of P-47s to Wewak, on the northern coast. Flying from there, they would pick off unwary enemy aircraft during dedicated fighter patrols. The Thunderbolt pilots in New Guinea slowly wore down their Japanese counterparts by continual combat and deadly strafing attacks, but nevertheless, the Ki-43-II remained a worthy opponent deterrent up until Hollandia was abandoned by the IJAAF in April 1944. Fully illustrated throughout with artwork and rare photographs, this fascinating book examines these two vastly different fighters in the New Guinea theatre, and assesses the unique geographic conditions that shaped their deployment and effectiveness.
