Biology and Ecology of Bluefin Tuna Takashi

Kitagawa, Shingo Kimura, 2015-08-05 This book focuses on latest information on the biology and ecology of the three bluefin tuna species: the Pacific (*Thunnus orientalis*), Atlantic (*T. thynnus*), and southern bluefin tuna (*T. maccoyii*). In the book, the phylogeny and basic ecological information such as early life history, age and growth, and food habits are covered. Information relat

Status Review Report of Pacific Bluefin Tuna

(*Thunnus Orientalis*) Matthew T. Craig, Steven J. Bograd, Heidi Dewar, Michael J. Kinney, Hui-Hua Lee, Barbara A. Muhling, Barbara Louise Taylor, 2017 In June 20, 2016 the National Marine Fisheries Service (NMFS) received a petition from the Center for Biological Diversity (CBD) and 13 co-petitioners requesting that Pacific Bluefin tuna, *Thunnus orientalis* (PBF), be listed as endangered or threatened under the Endangered Species Act (ESA) throughout all or a significant portion of its range. After review of the petition, NMFS published a positive 90-day finding in the Federal Register (81 FR 70074) on October 11, 2016, concluding that the petitioned actions may be warranted and announcing that a formal status review would be conducted as required by the ESA. A Status Review Team (SRT) was tasked to conduct this review. Pacific bluefin tuna are a migratory pelagic species of fish primarily inhabiting the North Pacific Ocean and, to a lesser extent, in the Tasman Sea and around New Zealand. They are a top predator and have extraordinary swimming

capabilities. Pacific bluefin are highly sought after for their flesh and both commercial and recreational fishing have contributed to a decline the population. To conduct this Status Review, the SRT considered a variety of scientific information from the literature, unpublished documents, and direct communications with researchers working on PBF, as well as technical information submitted with the petition and by the petitioners and others in response to the 90-day finding. The SRT evaluated the risks presented by several threats to the degradation/decline of the PBF population. After considering the severity of these risks as ranked by the SRT, the SRT performed an overall extinction analysis. All risk/extinction analyses were performed considering two time frames: 25 years and 100 years into the future--Executive Summary.

Tuna Richard Ellis, 2008-07-15 Famed marine researcher and illustrator Richard Ellis brings us a work of scientific achievement that will forever change the way we think about fish, fishing, and the dangers inherent in the seafood we eat. The bluefin tuna is one of the world's biggest, fastest, and most highly evolved marine animals, as well as one of its most popular delicacies. Now, however, it hovers on the brink of extinction. Here Ellis explains how a fish that was once able to thrive has become a commodity--and how the natural world and the global economy converge on our plates. With updated information on mercury levels in tuna, this is at once an astounding ode to one of nature's greatest marvels and a serious examination of a creature and world at risk.

Full-Life Cycle Aquaculture of the Pacific Bluefin Tuna 2000, 2002, 2003, 2012-03

Regulatory Impacts of Recreational Fishery Management Alternatives for North Pacific Bluefin Tuna Stephen M. Stohs, 2016 Management measures were considered at the Pacific Fishery Management Council in Fall 2013 to reduce North Pacific bluefin tuna population impacts due to U.S. west coast recreational fishing. The question of whether and how to regulate the west coast recreational fishery involves a potential tradeoff of conservation benefits to the bluefin tuna stock in exchange for negative short-run economic impacts of regulation on the west coast recreational anglers who include bluefin tuna among their catch species and affected industries and communities. Over time, if the management measures are successful and the stock rebounds, net benefits should become positive. This paper presents the results of an analysis of potential economic impacts and benefits to the North Pacific bluefin tuna stock for a range of alternatives including bag limits and other measures to manage bluefin tuna catch in the Southern California recreational commercial passenger fishing vessel fishery. Advances in Tuna Aquaculture Daniel

Benetti, Gavin Partridge, Alejandro Buentello, 2015-11-21 *Advances in Tuna Aquaculture: From Hatchery to Market* provides detailed overviews on the current status of tuna fisheries, fattening, and farming practices, as well as advances in closed-cycle tuna aquaculture. Contributors are renowned scientists, internationally recognized as authorities in their fields. This book addresses all basic and applied aspects of tuna aquaculture, presenting and discussing the global status of tuna fisheries, reproduction, broodstock management, spawning, larval rearing and early developmental stages including nursery and grow out methods. It presents incorporates the most comprehensive and updated data, statistics, and trends in tuna fisheries and aquaculture, covering and addresses a variety of topics ranging from endocrinology, nutrition, diseases, and genetics to economics and markets. It covers describes recent up-to-date progress on tuna aquaculture and hatchery development. It also provides a synopsis overview of the challenges presently confronted by tuna aquaculturists, facing tuna aquaculture and and offers innovative views on the challenges bottle-neck issues faced by the industry with the current shift from fisheries to fattening to closed-cycle aquaculture. This is the first book to encompass all aspects related to the tuna aquaculture industry, and merges them into a state-of-the-art compendium that will serve as seminal reference for students, researchers, and professionals working with tuna biology,

fisheries, and aquaculture worldwide. Incorporates and reviews the most recent information on tuna fisheries and aquaculture Presents the most innovative production technologies in tuna aquaculture, from hatchery to market Includes important information on tuna, derived from industry experience and academic research on larval rearing technology and grow out operations Encompasses and discusses key topics such as genetics, diseases, nutrition, endocrinology, and reproduction, as well as developments, challenges, and future opportunities in tuna aquaculture Provides the latest scientific methods and technologies to maximize efficiencies and production Presents the independent and collective assessments, viewpoints, and visions of various scientists, all internationally recognized as authorities in the field

Tuna Wars Steven Adolf, 2019-11-09 Historically, whenever tuna was hauled ashore, the sounds of battle were never far away. 'Tuna Wars' tells the untold story of the power struggles emerging around tuna, from the distant past to your present-day dinner table. In the ancient past, the giant tuna was the first fish to become the basis of a large-scale industry and a 'global' trade that created fortunes: Hannibal was able to finance his elephant campaign on Rome thanks to tuna. From the Middle Ages on, a tuna fishing monopoly on Spain's southern coast allowed the nobility to completely dominate the area and even lead the 'invincible' Armada. When the markets for tuna increased exponentially thanks to technical advances, tuna eventually became a billion-dollar business and one of the most-consumed fish species worldwide. But this massive expansion came at a price. An 18th century monk in Madrid was the first to warn that tuna fisheries needed to be run sustainably for the sake of future generations. And the issue of sustainability would go on to

become a game-changer in the modern tuna wars, characterized by new alliances and partnerships, hybrid warfare and commercial power struggles. In addition to accompanying you through the history of tuna and sharing insights into fisheries science and approaches to sustainably managing fisheries, Tuna Wars offers practical guidance on choosing sustainably fished tuna. In short, it will tell you everything you ever wanted to know about tuna, but were afraid to ask.

Historical Trends of Tuna Catches in the World

Makoto Miyake, Naozumi Miyabe, Hideki Nakano, Food and Agriculture Organization of the United Nations, 2004 The total world catch of the major commercial tuna species (albacore, bigeye, bluefin, skipjack and yellowfin) has increased during the last 50 years (from 0.4 to 3.9 million tonnes), but the pattern of increase has varied among species, oceans and fishing gears. The Pacific Ocean has been the predominant region in the world catch, with catches from the Indian Ocean having exceeded those from the Atlantic Ocean in recent years. This publication examines historical trends in the catches of these tuna species and considers the causes of the variations.

Tuna Barbara Ann Block, Ernest Donald

Stevens, 2001 Annotation Tuna are biologically fascinating, with many specializations such as endothermy (warm-bloodedness), aerobic capacity, and migratory abilities. The primary focus of this book is the physiology of tuna with respect to biomechanics, thermoregulation, and morphology. An evolutionary and phylogenetic backdrop illustrates the importance of comparative perspectives. Because of the economic importance of tuna, a secondary focus of the book is tuna aquaculture and conservation.

Red Gold Jennifer E. Telesca,2020-04-21

Illuminating the conditions for global governance to have precipitated the devastating decline of one of the ocean's most majestic creatures The International Commission for the Conservation of Atlantic Tunas (ICCAT) is the world's foremost organization for managing and conserving tunas, seabirds, turtles, and sharks traversing international waters. Founded by treaty in 1969, ICCAT stewards what has become under its tenure one of the planet's most prominent endangered fish: the Atlantic bluefin tuna. Called "red gold" by industry insiders for the exorbitant price her ruby-colored flesh commands in the sushi economy, the giant bluefin tuna has crashed in size and number under ICCAT's custodianship. With regulations to conserve these sea creatures in place for half a century, why have so many big bluefin tuna vanished from the Atlantic? In Red Gold, Jennifer E. Telesca offers unparalleled access to ICCAT to show that the institution has faithfully executed the task assigned it by international law: to fish as hard as possible to grow national economies. ICCAT manages the bluefin not to protect them but to secure export markets for commodity empires—and, as a result, has become complicit in their extermination. The decades of regulating fish as commodities have had disastrous consequences. Amid the mass extinction of all kinds of life today, Red Gold reacquaints the reader with the splendors of the giant bluefin tuna through vignettes that defy technoscientific and market rationales. Ultimately, this book shows, changing the way people value marine life must come not only from reforming ICCAT but from

transforming the dominant culture that consents to this slaughter.

Role of Science in the Governance of Tuna Fisheries in the Eastern Pacific Ocean Shauna Jae Jung Oh, 2009

Veiled Horizons Ralph Bandini, 2001-09-26 First published in 1939 by The Derrydale Press, *Veiled Horizons* offers a collection of anecdotes of fishing for the giants of the sea as well as fish tales many would find difficult to swallow. Writing in the same style as Zane Grey's fishing stories, Ralph Bandini enthralls his readers with breath taking descriptions, narrow escapes and of course, the one that got away.

Fisheries in the Pacific Elodie Fache, Simonne Pauwels, Valérie Allain, 2018-03-28 *Fisheries in the Pacific: The Challenges of Governance and Sustainability* is a multidisciplinary book, which examines various aspects of coastal and oceanic fisheries in Pacific waters. These interrelated fisheries sectors are critical for regional food security and also represent a reserve of food resources for the rest of the world. The introduction and eight chapters highlight that both these sectors raise major economic and ecological issues while revealing significant social changes, political asymmetries and alliances, geostrategic rationales, developments in legislation, customary dynamics, and conservation challenges. Through complementary approaches and interpretations of both quantitative and qualitative data, this book aims to contribute to a better understanding of the current situation of fisheries in the Pacific. It also responds to the compelling need to establish a constructive and ongoing dialogue on the matter between social scientists and environmental scientists, based in Europe and in the Pacific Islands, and between these experts and the various stakeholders and policy-making institutions

involved in the Pacific region.

Stock Identification Methods Steven X.

Cadrin, Lisa A. Kerr, Stefano Mariani, 2013-10-04
Stock Identification Methods, 2e, continues to provide a comprehensive review of the various disciplines used to study the population structure of fishery resources. It represents the worldwide experience and perspectives of experts on each method, assembled through a working group of the International Council for the Exploration of the Sea. The book is organized to foster interdisciplinary analyses and conclusions about stock structure, a crucial topic for fishery science and management. Technological advances have promoted the development of stock identification methods in many directions, resulting in a confusing variety of approaches. Based on central tenets of population biology and management needs, this valuable resource offers a unified framework for understanding stock structure by promoting an understanding of the relative merits and sensitivities of each approach. Describes 18 distinct approaches to stock identification grouped into sections on life history traits, environmental signals, genetic analyses, and applied marks. Features experts' reviews of benchmark case studies, general protocols, and the strengths and weaknesses of each identification method. Reviews statistical techniques for exploring stock patterns, testing for differences among putative stocks, stock discrimination, and stock composition analysis. Focuses on the challenges of interpreting data and managing mixed-stock fisheries.
