Indian Aircraft Industry: Possible Invention for Success in the Twenty First Century Group Captain Vivek Kapur,2017-09-15 India's Aircraft Industry, despite having been formed as early as in December 1940 has been unable to meet the equipment needs of the aviation users, whether military or civil, in the country. As a consequence India imports all its aircraft needs from abroad. This situation needs to change. This book starts from an examination of the importance of aviation to the country both for military as well as or civil purposes. From here it goes on to trace the development of aviation in India. Then the book examines the Indian Aircraft Industry from studying the aircraft projects carried out by India. From these aircraft projects lessons and learning have been culled for use later in the book. Thereafter there are case studies carried out of the two leading airpower capability countries, the USA and erstwhile Soviet Union / Russia. There are also case studies of Brazil and China as these two countries were behind India in aviation in the 1950s but are globally competitive today, unlike India. The lessons and learning from the case studies are compiled and then used finally to develop possible models that could help make India's aircraft industry globally competitive.

Technology Security and National Power Stephen D. Bryen,2017-07-05 In Technology Security and National Power, Stephen D. Bryen shows how the United States has squandered its technological leadership through unwise policies. Starting from biblical times, he shows how technology has either increased national power or led to military and political catastrophe. He goes on to show how the US has eroded its technological advantages, endangering its own security.The scope ofTechnology Security and National Power extends across 3,000 years of history, from an induced plague in Athens to chemical weapons at Ypres to an atomic bomb on Hiroshima to the nuclear balance of terror. It describes new weapons systems and stealth jets, cyber attacks on national infrastructure, the looting of America's Defense secrets, and much more. The core thesis is supported by unique insight and new documentation that reaches into today's conflicted world.More than a litany of recent failures and historical errors, this book is a wake-up call for political actors and government officials who seem unable to understand the threat. Technology Security and National Power proposes that the United States can again become a winner in today's globalized environment.

The World Disorder Luiz Alberto Moniz Bandeira,2019-01-23 This book offers a historical analysis of the geopolitical and geoeconomic competition between the USA and Russia, which has recently heated up again due to the eastward expansion of NATO. The analysis departs from an exploration of the USA's foreign policy and geopolitical ambitions by illustrating the influence of Wall Street and the military-industrial complex on the country's political decision-making. The historical review covers a wide timespan, from the Second World War and the birth of NATO, to the wars against Iraq and Afghanistan, to the rebellions that erupted in Eurasia, Northern Africa and the Middle East in the 2010's, as well as the wars in the Ukraine and in Syria. By doing so, it reveals the influence of US neocons, the US intelligence services and the military complex on the Arab Spring, the Color Revolutions and the armed conflicts in Ukraine and Syria. Ultimately, the book depicts a new era of worldwide instability and disorder, dominated by violence and arbitrariness.

Global Defense Procurement and the F-35 Joint Strike Fighter Bert Chapman,2018-12-27 This book analyzes the development and evolution of the F-35 Joint Strike Fighter, a multinational aircraft endeavor involving the U.S. and many of its allies. The author provides a historical overview of jet fighter aircraft, discussing the different generations of these planes and their technical characteristics, as well as an outline of emerging international geopolitical and security trends the F-35 may see combat in. By examining the role of defense industries, domestic politics, and governmental oversight of the Joint Strike Fighter in various countries, the author concludes that this aircraft will be deployed in most of these countries to replace their aging jet fighter fleets and combat potential military aggression from China, Russia, and other revisionist international powers.

The Aviation History Relly Victoria Petrescu,Florian Ion Petrescu,2013-02 According to Aulus Gellius, Archytas, the Ancient Greek philosopher, mathematician, astronomer, statesman, and strategist, was reputed to have designed and built, around 400 BC, the first artificial, self-propelled flying device, a bird-shaped model propelled by a jet of what was probably steam, said to have actually flown some 200 metres. This machine, which its inventor called The Pigeon, may have been suspended on a wire or pivot for its flight. The 9th century Muslim Berber inventor, Abbas Ibn Firnas's glider is considered by John Harding to be the first attempt at heavier-than-air flight in aviation history. In 1010 AD an English monk, Eilmer of Malmesbury purportedly piloted a primitive gliding craft from the tower of Malmesbury Abbey. Eilmer was said to have flown over 200 yards (180 m) before landing, breaking both his legs. He later remarked that the only reason he did not fly further was because he forgot to give it a tail, and he was about to add one when his concerned Abbot forbade
