**Coral Reefs of the Indian Ocean** T. R. McClanahan, C. R. C. Sheppard, D. O. Obura, 2000-10-12 Coral reefs are among Earth's most diverse, productive, and beautiful ecosystems, but until recently, their ecology and the means to manage them have been poorly understood and documented. In response to the inadequate information base for coral reefs, this book reviews the ecological and conservation status of coral reefs of the Western Indian Ocean, bringing together presentations of the region's leading scientists and managers working on coral reefs. *Coral Reefs of the Indian Ocean: Their Ecology and Conservation* starts with a general overview of the biogeography of the region and a historical account of attempts to conserve this ecosystem. It goes on to describe the state of the reefs in each of the countries with coral reefs, and it concludes with a series of management case studies. The book also summarizes most of the existing ecological information on reefs in this region and efforts at management, making it useful for students, teachers, and investigators interested in tropical or marine ecology, conservation biology and management, and environmental sciences.

**Spiny Lobsters** Bruce Phillips, Jiro Kittaka, 2008-04-30 Spiny lobsters are among the world's most valuable and highly prized seafoods, captured and marketed in over 90 countries. Demand for spiny lobsters has escalated in the past two decades, spurring the need both for better management and for research on which to base that management. Spiny lobster aquaculture, however, now appears to be a real possibility, some countries have already approved the legislation, and it may be only a few years before this becomes the major source. The book opens with a brief review of the general biology, distribution, fishing techniques etc. but the major emphasis is on the latest management strategies, developments in aquaculture, marketing and economics. A special feature of the book will be detailed reviews of the spiny lobster fishery, research activities and marketing process in Japan, where customers are willing to pay more than US\$50 per pound for live lobsters.

**Lobsters: Biology, Fisheries and Aquaculture** E. V. Radhakrishnan, Bruce F. Phillips, Gopalakrishnan Achamveetil, 2019-11-28 This book is an important addition to the knowledge of lobster research. The book complements other books published on lobster research and management as it focuses on Indian lobster fisheries and aquaculture developments where there have been nearly 350 research papers and reports and 19 PhD awards. The book has 15 chapters written by international experts covering many aspects of the biology of a number of spiny and slipper lobster species occurring in India and world oceans with maps illustrating global distribution of spiny lobster families, genera and species. An updated taxonomy and checklist of marine lobsters, the status and management of lobster fisheries in India and Indian Ocean Rim countries and a review of aquaculture research in India and other major countries have also been presented. The book is timely as the 2nd International Indian Ocean Expedition (IIOE) is currently underway (2015-2020), 50 years after the original IIOE (1959-1965), with some of the original lobster research on the biology and distribution of phyllosoma larvae being undertaken on the plankton samples collected during the first IIOE. Many of the chapters are contributed by the authors from Central Marine Fisheries Research Institute (CMFRI), which has been collecting fishery and biological data on lobsters since 1950 when lobster fishing began on a subsistence scale, followed by some industrial fishing for lobsters in different parts of India. Unfortunately, the development of some of these lobster fisheries was followed by overfishing due to lack of enforcement of regulations. The book provides a valuable addition to our knowledge of the biology, fisheries and aquaculture of spiny and slipper lobsters.

**Restocking and Stock Enhancement of Marine Invertebrate Fisheries** Johann D. Bell, P. C. Rothlisberg, J. L. Munro, 2005-12-07 Annotation Many of the world's fisheries are in trouble - they no longer yield the catches, and potential profits, they once did. The habitats that support fisheries have been damaged by pollution and other irresponsible use of coastal land. Destructive fishing methods like trawling and blast fishing have also changed fish habitats resulting in support of fewer fish. The authors draw on more than 1000 scientific papers covering 11 groups/species of marine invertebrates. From this large literature, they distill 20 lessons for assessing and guiding the use of restocking and stock enhancement in the management of invertebrate fisheries. · Written by 7 expert authors · Covers 11 groups/species of marine invertebrates · Reviews over 1000 scientific papers · Identifies 20 lessons that can be learned from past restocking and stock enhancement initiatives · Proposes a new approach to assess the potential value of hatchery releases to complement other forms of management · Assesses progress of discipline against the blueprint for a responsible approach.

**Responsible Marine Aquaculture** Robert R. Stickney, James P. McVey, 2002-01-01 With the expansion of the world aquaculture industry, there has been increasing concern over sustainability and environmental impact. This book addresses this topical issue, concentrating on marine aquaculture.

**Marine Products for Healthcare** Vazhiyil Venugopal, 2008-10-20 Considered Mother Nature's medicine cabinet in many areas of the world, marine organisms have been known from time immemorial to possess curative powers. But until recently, their bioactive compounds, nutraceutical properties, and commercial potential remained undiscovered. Bringing together widely scattered literature, *Marine Products for Healthcare: Functional and Bioactive Nutraceutical Compounds from the Ocean* discusses the importance of marine products as a source of nutraceuticals, food additives, and other useful ingredients in health protection and product formulation. The book begins with a discussion of the general characteristics of functional foods and an overview of the functionality of marine fishery products. It includes detailed discussions on nutraceutical and other functional properties of their seafood components including proteins, bioactive peptides, polyunsaturated fatty acids, polysaccharides, chondroitin, carotenoids, minerals, and shell waste products. Other chapters examine the role of seaweeds as food supplements, additives, and bioactive compounds; microalgae and corals rich in nutrients, pigments, and therapeutic agents; and secondary metabolites of corals, particularly sponges, that have potential as lifesaving drugs. The book also explores recent developments in food fortification, packaging, and drug delivery systems with particular reference with marine ingredients and concludes with a delineation of the safety hazards posed by some marine products. The science of discovering health promoting compounds from marine sources and techniques for extracting and purifying these chemicals is advancing. More than just a review of the science and market base available for the development of marine nutraceutical/functional food, this book provides a greater understanding of how consumer attitude and legal concerns will impact the kind of products that can be made.

**Economic Aspects: Fisheries and Culture** Anthony Jr. Provenzano, 2012-12-02 *The Biology of Crustacea, Volume 10: Economic Aspects: Fisheries and Culture* focuses on economic aspects of elements of crustacean biology associated primarily with the production of human food, namely, fisheries and culture. Organized into five chapters, this book deals first with the groups comprising the commercially important shrimps and prawns and their near relatives, as well as the generally used fishing method. It then describes the role and impact of body form in the biology and especially the fisheries of crabs. Subsequent chapter centers on lobsters and their kin, particularly the impact on fisheries methods and management approaches of behavioral responses to environment, modes of reproduction, recruitment, and population dynamics. Culture methods and factors

important in managing systems through water quality control are then reported. Lastly, large-scale culture of major decapod groups, including the general biological characteristics of decapods relevant to aquaculture, is presented. This book will help stimulate the further exploration of some of the most fascinating and exciting problems in applied crustacean biology.

**Lobsters** Bruce Phillips, 2008-04-15 Lobsters are one of the most commercially important groups of animals harvested and farmed throughout the world. Bringing high prices on the market and the table, the results and yields of farmed species has seen continued growth. Under the Editorship of Bruce Phillips an international team of authors provide exhaustive coverage of these fascinating creatures, stretching from growth and development to management and conservation, providing the reader with: Key information for lobster farmers and harvesters Organisation of the species by genera for ease of use Coverage of parasites, pathogens and commensals; their impact, detection and measurement Fisheries scientists, aquaculture personnel, aquatic and invertebrate biologists, physiologists, ecologists, marine biologists and environmental biologists will all find this a vital source of reference. Libraries in universities and research establishments where biological and life sciences and fisheries and aquaculture are studied and taught will find it a valuable addition to their shelves.

**Recent Advances and New Species in Aquaculture** Ravi Fotedar, Bruce Phillips, 2011-07-07 This comprehensive, up-to-date text delivers the latest must-have information on species new to aquaculture and documents the most important technological innovations of the past decade. Every aspect of the growing field has been addressed with coverage spanning recent technological development, new species, recent changes and global trends. More specifically, you will find information on the culture of species such as barramundi, cobia, dolphin fish, spiny lobsters, slipper lobsters, mud crabs, penaeid prawns, Nile tilapia, yellow king fish, abalone, sea cucumber and sea urchin, seaweed, ornamentals and Indian major carps, fugu, mud skippers, cephalopods and blue fin tuna. The technological innovations and introduction of new species into aquaculture are critical to the evolution of the global aquaculture industry; an industry which is rapidly becoming one of the fastest growing in the world, having experienced huge advances across its many and diverse facets. Recent Advances and New Species in Aquaculture focuses explicitly on the ever-changing face of aquaculture, providing core scientific and commercially useful information on the remarkable growth in aquaculture production and in the advancement of new technological tools. Written by many well respected international figures and drawn together and edited by Ravi Fotedar & Bruce Phillips, this exciting book is an essential purchase for anyone involved in or about to enter into the aquaculture industry. Libraries in all universities and research establishments where aquaculture, fish biology, aquatic and environmental sciences and fisheries are studied and taught will find this an important addition to their shelves. Recent Advances and New Species in Aquaculture is sure to become a key companion for all those studying aquaculture and a valuable source of reference for all personnel involved in the industry.
