German Superheavy Panzer Projects of World War II Michael öhlich,2019-11-28 Tank design bureaus first became involved in the development of very heavy tanks after WWI. In addition to the militaries of Germany and England, the Soviet Union was also fascinated by these monsters. Behind it was the concept of transferring the heavy armament of naval warfare to land warfare. These superheavy vehicles were to move across the land the way battleships moved on the sea, and were to be capable of simultaneously defeating enemy forces from any direction. In this follow-up to his highly regarded work on the Panzerkampfwagen Maus, Michael Fröhlich turns his attention to the other superheavy Wehrmacht designs, such as the Grille 17, the Löwe VK 7001, the Räumer S, the Mörser Bär, the E-100 (successor to the Maus), and the 1,100-ton Urling armored howitzer. Fröhlich comprehensively describes their development, technology, and testing, and the eventual fate of those vehicles that were built or only projected. Many rare and never-before-published photographs and drawings of the vehicles complement this unique work.

German Heavy Fighting Vehicles of the Second World War Kenneth W. Estes,2018-04-17 The German army faced tanks of superior size, armor and firepower from the outset of World War II. Although their Panzerwaffen handled the Polish campaign, war with France meant confronting superior heavy and medium tanks like the Char B and Somua, with 47 mm high velocity cannon that penetrated German tank armor with ease. French infantry disposed of effective antitank weapons and a portion of their 75 mm field guns were detailed as antitank guns. Even greater challenges emerged with the Russo-German War, for the Germans had no initial answer to the KV-1 heavy tank and T-34 medium. The successive technical shocks of superior tanks introduced by each side produced a gun-armor race that continued in some manner even after the war's end. The Germans placed a premium on technological quality and superiority over mass production, for which their industry (and, arguably, their regime) remained rather unsuited. Not satisfied with the advantage they obtained with the Tiger and Panther series tanks, the army leadership and Adolf Hitler himself pushed for larger and more powerful tanks than had ever been built.

Panzer IV Thomas Anderson,2021-01-21 The Panzer IV programme was started in 1934, forming, alongside the Panzer IIs and IIIs, the schnellen Truppen, the force that was to become the Panzerwaffe. At first, German planners envisioned the tank in a secondary role, but during the invasions of The Low Countries and France, it took on a more central role. When the Panzerwaffe turned east to attack the Soviet Union, the Panzer IV initially fared poorly against the better-armed T-34. However, upgrades to its gun and armour protection saw it perform far better, not only against Soviet armour but also against British and American tanks in North Africa and Italy. In 1944, it was slowly replaced by the Panzer V Panther, but the dire strategic situation meant that it bore the brunt of the Allied D-Day invasion and its aftermath, and it remained in service until the end of the war. Fully illustrated throughout with contemporary photographs, this fascinating study from German armour expert Thomas Anderson tells the complete story of Germany's most widely produced tank of World War II, from its design and development to its many upgrades and variants.

Panzerkampfwagen MAUS Thomas L. Jentz,1997-02-01 Beskrivelse af den tyske kampvogn Maus, der vejede 100 t. og aldrig kom til at spille en rolle blandt 2. Verdenskrigs øvrige kampvogne. Vognen må betegnes som en prototype, der aldrig nåede produktionsstadiet.

Panzer Gunner Bruno Friesen,2008-02-19 An insider's account of training and service in Nazi Germany's twenty-fifth Panzer Regiment during World War II. There are few memoirs available of German Panzer crews that focus on the climactic last 12 months of the war on the Eastern Front, 1944-45. What makes Bruno Friesen's account virtually unique is his family background: his parents came from a German-speaking Mennonite community in Ukraine, and were to all intents and purposes culturally German. To make matters even more complex, in 1924 his parents left the Ukraine for Canada, where Bruno was born. In March 1939 he and his brother Oscar found themselves on a ship bound for Bremerhaven in Germany. He barely spoke German, and had never been to Germany, nevertheless his father envisaged that a better life awaited them in the Third Reich. Needless to say, Bruno became caught up in the Second World War, and in 1942 was drafted into the Wehrmacht. The author provides a full account of his family background, and how, through these unusual circumstances, he found himself a Canadian-born German soldier. The bulk of the book is a detailed account of the author's training, and his subsequent service with 25th Panzer Regiment, part of 7th Panzer Division. As the title suggests, Bruno Friesen served as a gunner aboard, initially, Panzer IVs, before crewing the lesser-known Jagdpanzer IV tank hunter. The author provides a fantastic amount of information about these two vehicles, and how the crews actually fought in battle with them. This kind of 'hands-on' detail has almost never been available before, particularly such extensive information concerning the characteristics and combat performance of the Jagdpanzer IV. Apart from providing a large fund of information about specific German tanks and their combat performance, the author writes in great detail about the combat the experienced on the Eastern Front, including tank battles in Rumania, spring 1944, Lithuania in the summer of 1944, and West Prussia during early 1945. If one wants to know how German tank crews fought the Soviets in the last year of the war, then this book provides an outstanding account, containing material simply not found elsewhere. The author closes his account by reflecting on his post-war efforts to return to Canada, which eventually succeeded in 1950, and his subsequent life there. This book is not just a critique of armored fighting vehicles and tank warfare, it is above all a very human story, told in a lively, conversational and fluid manner, and is a remarkable contribution to the literature of the Second World War.

Tank Gun Systems William Andrews,2023-06-30 Much has been written about the use of tanks in battle. Little, however, has appeared about the gunnery systems that are at their core. This book describes and examines the main gun systems of medium and heavy tanks from first use in 1916 in World War I to those fielded in numbers to the end of World War II in 1945, including tanks of the interwar period. Specifically considered are guns of a caliber greater than 35 mm, which have been deployed in numbers greater than 100. The emphasis is on guns mounted in turrets on heavier tracked armored fighting vehicles (greater than 15 tonnes) which were considered tanks. There are, though, exceptions, in that the naval 6 pounder guns in First World War British tanks, as well as the 75 mm

guns in French medium tanks of the same period (all turretless) are included. The treatment of gun systems includes sighting and fire control equipment, gun laying equipment, mounts and the array of munitions fired, as well as the actual gun, including its, barrel, cradle, breech, firing mechanism, sights and recoil system. Related to this are issues of gun handling (loading and unloading), ammunition design and rates of fire. Also examined are the maximum impulse and energy generated by firing some of the munitions available that must be absorbed by the gun recoil system.

Kampfpanzer Maus Michael öhlich,2017-01-28 In 1944 the Maus giant battle tank, weighing almost 190 tons, was supposed to help turn the Wehrmacht's fortunes of war on the Eastern Front. Just two prototypes of this monster were delivered, for its undeniable advantages--tremendous firepower and virtually impenetrable armor--were outweighed by the disadvantages of its slowness, excessive use of materials in construction, and fuel consumption so high that it was, by that time, far beyond the Germans' ability to supply. With this volume, Michael Fröhlich continues the legendary Spielberger series and delves into one of the most curious military vehicles produced by Germany--the Maus super-heavy tank. For the first time, this book tells the complete story of this vehicle, including its inner workings, accompanied by many previously unpublished illustrations. But that is not all: the book includes another novelty, the complete operating instructions for the tank's crew!

Australian-built Aircraft and the Industry Keith Raymond Meggs,2009 An encyclopaedic, four-volume work on every aircraft type proposed, designed, or manufactured in Australia, from Lawrence Hargrave's experiments in the 1880's, through to the authors self-imposed cutoff point in the mid-1980's. The four-volume work lists over 540 aircraft types as well as detailed histories of the companies involved in their construction. Coverage is multi-faceted, being technical, operational, historical, industrial, and political. Along with the text is the most comprehensive collection of photographs, technical drawings, and diagrams yet assembled into the one reference work, many of which have never before been seen outside the original source. Exhaustively researched over the past 40 years by the well-known aviation personality Keith Meggs, a man uniquely placed to write on all aspects of Australian aviation from construction through to operational flight. All volumes are superbly indexed and cross-referenced with the main text reinforced by extensive and detailed endnotes. Aircraft enthusiasts, pilots, aeronautical engineers, manufacturers, industrialists, universities, and other technical institutions, Australian-built aircraft and the industry is a must have for your reference library. In Volume One the fourteen chapters cover the following activities: Hargrave, Taylor, the Commonwealth Prize, Early Experimenters, Duigan, WWI Activity, AA&ECo, 1924 Lightplane Competition, LASCo, QANTAS, WAA, RAAF Randwick, Individual Builders 1918-1939, AMSCo, MSB, Matthews Aviation, General Aircraft Co, Cockatoo Dockyard, Tugan Aircraft, Harkness & Hillier, De Havilland (Aust) - part 1, Industry proposals, and other snippets.--Provided by publisher.

Seek, Strike, and Destroy Christopher Richard Gabel,1986 In the seventy years that have passed since the tank first appeared, antitank combat has presented one of the greatest challenges in land warfare. Dramatic improvements in tank technology and doctrine over the years have precipitated equally innovative developments in the antitank field. One cycle in this ongoing arms race occurred during the early years of World War II when the U.S. Army sought desperately to find an antidote to the vaunted German blitzkrieg. This Leavenworth Paper analyzes the origins of the tank destroyer concept, evaluates the doctrine and equipment with which tank destroyer units fought, and assesses the effectiveness of the tank destroyer in battle.

German Armor in Normandy Yves Buffetaut,2018-10-19 Throughout the Second World War, a shift occurred in the composition of the large armored units of armies which lead to an increase in the power of their tanks in particular. The Germans were no exception. Many of its recently formed Panzer divisions, from the 12th SS-Panzerdivision Hitlerjugend to the 2nd SS-Panzerdivision Das Reich, were thrust into the effort to repel the Allies from June to August 1944 in Normandy. Within just ten weeks they would be defeated. This volume of Casemate Illustrated starts by exploring the initial struggle to gain control of Caen after the Allies had landed on the beaches of Normandy which resulted in the ferocious German Tiger tanks destroying the 7th Armored Division, with British losses totaling twenty-seven tanks. The subsequent strategies the commanders devised for the Panzer tanks during Operations Goodwood and Cobra were not so successful, ultimately ending in disaster for the Germans as the Allies broke through the German line by the end of July. With over 100 photos, diagrams showing the composition of German armored divisions, and color profiles of tanks and other armored vehicles, this is a detailed examination of the German armored forces in Normandy in 1944, focusing on the organization of the 10 Panzer divisions that took part, the vehicles they relied on and the battles they fought in and why ultimately their combined strength was not enough.
