Parasaurolophus (Parasaurolophus) Grace Hansen, 2022-08-01 This title takes you millions of years back in time to meet Parasaurolophus, an herbivorous dinosaur with a distinct crest on its head. Complete with computer generated images, fossil finds, and a fossil map! Aligned to Common Core Standards and correlated to state standards. Parasaurolophus and Other Duck-Billed and Beaked Herbivores David West, 2010-08-01 The dinosaur group ornithopods included the giant Parasaurolophus, the tiny Lesothosaurus, and many other dinosaurs in between. The name "ornithopod" comes from the Greek words for "bird foot," which describes the dinosaurs' three-toed feet. However, this isn't the only similarity the ornithopods had with birds. They also had duckbills or beaks. The detailed illustrations and informative text in this book give readers a close-up look at twelve birdlike dinosaurs.

Parasaurolophus Gerry Bailey, 2011 Introduces this duck-billed herbivorous dinosaur.

Parasaurolophus David White, 2001 Describes prehistoric life with emphasis on the parasaurolophus. Discusses its food, daily

activities and predators.

Introduction Salutations young reader! Today we
are going to embark on a journey back to the age
of the dinosaurs. The dinosaurs are some of the
most incredible animals that ever lived on our
planet. They lived nearly 200 million years ago
and thrived for about 165 million years. We humans
have only been around for about 60,000 years and
we have only been using computers for about 75
years. The dinosaurs mysteriously became extinct
and disappeared from our earth, but left their
fossilized remains behind. Dinosaur fossils have
been constantly discovered in human history; the
Chinese thought they were dragon bones and
Europeans thought they were the bones of biblical
monsters. Luckily, the scientific study of
dinosaurs began in between 1815-1824 with the
discovery of an Iguanodon fossil. Since then
dinosaurs have been discovered all over the world.
Their immense size, strange shapes, and wonderful
natures make them inherently worthy of interest.
The study of dinosaurs requires depth of
imagination, analytical skills, and thought. The
many unanswered questions about their lives,
behavior, and disappearance provoke the curious to
seek answers and ask even more questions. I hope
this book fuels your imagination and makes you
want to learn even more about dinosaurs. I hope
you learn to appreciate the value of the dinosaurs
and that you bring a spirit of openness and wonder
on your journey. Today we will be learning about
the Parasaurolophus. This dinosaur is a cool
dinosaur to study because it was highly adaptable.

This species of dinosaur survived for The Parasaurolophus also had an amazing crest on the top of its head. The purpose of this crest is currently being investigated by scientists- we are going to discuss this crest and much more including the appearance, behavior, and environment of this dinosaur. We know what we know about the dinosaurs from a variety of sources including fossils, biology, and other scientific disciplines. Fossils are the ancient remains of the dinosaurs, the most familiar being their bones. Biological science is the study of life in general, but many scientists compare the dinosaurs to modern day animals to support their theories. Before a talk about dinosaurs can take place it is important that we discuss the theory of evolution. Evolutionary theory supposes that all the animals we know and see today are the direct descendants of animals that existed millions of years ago. The dinosaurs and other creatures that existed millions of years ago either died out or gradually changed into different animals. For instance, birds are considered to be surviving dinosaurs because their dinosaur ancestors survived the dinosaur extinction event (we will discuss this later). There are no evolutionary descendants of the Parasaurolophus. Remember that any time you see an * next to the name of a dinosaur, it means that a book has been written about this dinosaur in the Dinosaur Books for Young Readers series. Any word written in bold is an important scientific term which is defined in-text. Italics are used to denote the first time a dinosaur's name is mentioned in the book.
