Personnel Armor System Ground Troops Helmet Mark A. Reynosa,1999 This book presents the history of the U.S. military's current issue helmet - the PASGT (pass-get) Helmet - and provides the most comprehensive look into the research, development, and production of the helmet between 1971 and the present. All aspects of the PASGT Helmet are covered, including the early research and development efforts that resulted in the final helmet design and construction. The book supplements coverage of this early period with photographs of the various helmets. The book also provides a detailed look at helmet production, including the ground troop's helmet, parachutist's helmet, and helmet covers. The production history of every major manufacturer is also provided. Every production helmet is covered with full color photographs, including details and production markings. Also included are contract sheets and military specification drawings. AUTHOR:

The Effects of the Personal Armor System for Ground Troops (PASGT) and the Advanced Combat Helmet (ACH) with and Without PVS-14 Night Vision Goggles (NVG) on Neck Biomechanics During Dismounted Soldier Movements ,2007 Kevlar helmets provide the soldier with basic ballistic and impact protection. However, the helmet has recently become a mounting platform for devices such as night-vision goggles, drop down displays, weapon-aiming systems, etc. Although designed to enhance soldier performance, these systems increase the mass of the helmet and typically shift the position of the helmet's center of mass forward. The effects of changing the mass properties of the helmet on head and neck forces and moment on neck muscle activity and fatigue are well documented for aviators and soldiers in vehicles. No research to date has been focused on the effects of helmets of varying mass and mass distribution on head and neck forces and moments during a combat foot soldier's physical activities. Physical demands on the combat foot soldier are substantially different from those on aviator or soldiers in vehicles. Therefore, changing the mass properties of the helmet likely has different effects on combat foot soldiers than on aviators. The study answers the militarily relevant question of what forces and moments on the head and neck are associated with currently used Army helmets and night vision goggles during combat physical activities of the ground soldier.

Kwikpoint PASGT Upgrade Kit Installation Instructions Kwikpoint,Alan Stillman,2007 This visual manual is used to install an much more protective padding system in the standard issue helmet. It includes an description of the various pads that are used, how to install them, how to install the retention strap and four-point harness, and a proper fit guide. Designed to protect the warfighter from head injuries, particularly concussions, this pad suspension system performs as designed only if properly installed.

How Satisfied are Soldiers with Their Ballistic Helmets? A Comparison of Soldiers' Opinions about the Advanced Combat Helmet and the Personal Armor System for Ground Troops ,2008 Many factors are considered during ballistic helmet design, including comfort, weight, fit, and maintainability. These factors affect Soldiers' decisions about helmet use; therefore, rigorous research about Soldiers' real-life experiences with helmets is critical to assessing a helmet's overall protective efficacy. This study compared Soldiers' satisfaction and problem experience wit the advanced combat helmet (ACH) and the personal armor system for ground troops (PASGT) helmet. Data were obtained from surveys of Soldiers at Fort Bragg, North Carolina. Ninety percent of ACH users were satisfied with their helmet, but only 9.5% of PASGT users were satisfied (p

Evaluation of the Head Injury Hazard During Military Parachuting ,1990 The incidence of head injury during U.S. Army airborne training and airborne operations has doubled in recent years. A number of factors are known to contribute to head injuries incurred during airborne training/operations. These factors include the small amount of impact protection provided by the PASGT helmet, shortcomings in training procedures, and failure of trained airborne troops to follow proper procedures when jumping. Other factors are involved as well. This report shows, with relatively little modification, the impact protection and retention characteristics of the PASGT airborne helmet can be significantly improved. Also, this report evaluates a number of factors present in airborne training and operational environments that contribute to head injury and explains how training and operational procedures can be modified to reduce the incidence of repeated headstrikes and subsequent serious head injuries. Head injury; Impact protection; PASGT helmet; Operational environments; Headstrikes.

Shattered Minds Robert H. Bauman,Dina Rasor,2019-03-01 Shattered Minds is the first book to investigate how American military bureaucracies have let our troops down by failing to upgrade one of the most important pieces of personal safety equipment: the combat helmet. Two longtime employees of North Dakota defense contractor Sioux Manufacturing discovered that the required density of the Kevlar material woven into the netting of combat helmets was being shorted. After bringing their discovery to the attention of management, their boss, rather than cleaning up the illegal practice, accused them of having an adulterous affair. Both employees were fired, leading to a lawsuit and a court judgment in their favor that eventually brought the company's bad-faith practices to light. Around the same time, a separate whistleblower, a retired Navy doctor, was pulled into a bizarre struggle with Army and Marine bureaucracies when he discovered from his Marine grandson that the protective webbing inside the military helmets was inadequate. Why was the military so resistant to upgrading the most essential piece of gear to protect soldiers from traumatic brain injury? Interweaving these two whistleblower stories, Robert H. Bauman and Dina Rasor explain why the military, despite news coverage and congressional hearings on the faulty helmet, continued to do the indefensible. They also suggest how the public, the press, and military institutions can remedy the problem to give U.S. troops effective helmets when serving to protect their country.

Wellington Sears Handbook of Industrial Textiles Sabit Adanur,1995-10-06 The Wellington Sears Handbook of Industrial Textiles has been a widely used textile industry reference for more than 50 years. Now a completely updated new edition has been published. It was prepared by a team of industrial textile specialists at Auburn University to provide both technical and management personnel with a comprehensive resource on the current technology and applications of today's industrial textiles. All aspects of industrial textiles are covered: man-made and natural materials, manufacturing and finishing methods, and all applications. There are also sections on properties, testing, waste management, computers and automation, and standards and regulations. The appendices provide extensive reference data: properties, specifications, manufacturers and trade names, mathematical equations and measurement units. The text is organized for easy reference, and well illustrated with hundreds of schematics and photographs.

Physiological, Biomechanical, and Maximal Performance Comparisons of Female Soldiers Carrying Loads Using Prototype U.S. Marine Corps Modular Lightweight Load-Carrying Equipment (MOLLE) with Interceptor Body Armor and U.S. Army All-Purpose Lightweight Individual Carrying Equipment (ALICE) with PASGT Body Armor ,1999 The experiment evaluated the physiological, biomechanical, and maximal performance responses of 12

female soldiers carrying loads with prototype Modular Lightweight Load-Carrying Equipment with Interceptor body armor (MOLLE/I), and All-Purpose Lightweight Individual Carrying Equipment with PASGT body armor (ALICE/P). MOLLE/I and ALICE/P did not differ on several tests including: energy cost of load carriage, 2 mile load carriage speed, sprint speed with load, knee range of motion, and heel-strike braking force. The ALICE/P bested MOLLE/I for speed of getting prone and standing; speed of getting prone, rolling 3 times, and aiming a rifle; obstacle course speed, especially for the low crawl; grenade throw distance; subjective comments; total-body complaints under the fighting load; heel-strike and push-off forces; front-back pack movement; and pressure under the shoulder straps. MOLLE/I bested ALICE/P as to design modularity; walking posture; quick pack release; tightness of shot groups; shoulder complaints; complaints about all body areas other than the shoulders and hips under the sustainment load; total-body complaints under the approach and sustainment loads; time in double-support under the approach and sustainment loads; front-back trunk sway under the sustainment load; and horizontal location of pack center of mass under the sustainment load. Despite its overall superiority, the prototype MOLLE/I could be improved to enhance obstacle course performance, make its quick-release system easier to find and reach, enhance body armor comfort and fit for females, reduce its restrictiveness, and reduce interference with tightening the waist belt. Frame cracking of MOLLE prototypes has apparently been solved by improved manufacturing techniques.

Military Injury Biomechanics Melanie Franklyn, Peter Vee Sin Lee, 2017-06-12 Military Injury Biomechanics: The Cause and Prevention of Impact Injuries is a reference manual where information and data from a large number of sources, focussing on injuries related to military events, has been critically reviewed and discussed. The book covers the cause and prevention of impact injuries to all the major body regions, while topics such as the historical background of military impact biomechanics, the history and use of anthropomorphic test devices for military applications and the medical management of injuries are also discussed. An international team of experts have been brought together to examine and review the topics. The book is intended for researchers, postgraduate students and others working or studying defence and impact injuries.

Analysis of the Effects of Body Armor and Load-Carrying Equipment on Soldiers' Movements. Part 2. Armor Vest and Load-Carrying Equipment Assessment, 1997 This is one of three reports of a study on the effects of the Personnel Armor System for Ground Troops (PASGT) vest and a prototype armor vest and two types of fighting loads on soldiers' movements. The fighting loads were the All-Purpose Lightweight Individual Carrying Equipment (ALICE) and the tactical load-bearing vest. Twelve male soldiers performed seven planar movements and a walking task while wearing the vests and fighting loads with either a T-shirt and shorts or the Temperate Battledress Uniform (BDU). Two measurement methods were applied to quantify the extent of the movements, one of which was a video and computer based technique. This report contains results of the effects of the vest and fighting load designs on the planar movements, as quantified using the video technique. It was found that the prototype vest imposed less restriction on movement than the PASGT vest did. Range of motion with the tactical load bearing vest was also equal to or better than that with the ALICE. A second report (NATICK/TR-98/002) contains comparisons of the data acquired on the planar movements using the two measurement techniques, and a third report (NATICK/TR-98/004) contains findings from the video-based analysis of gait.

Advances in Ergonomics In Design, Usability & Special Populations: Part I Marcelo Soares, Francisco Rebelo, 2022-07-19 Successful interaction with products, tools and technologies depends on usable designs and accommodating the needs of potential users without requiring costly training. In this context, this book is concerned with emerging ergonomics in design concepts, theories and applications of human factors knowledge focusing on the discovery, design and understanding of human interaction and usability issues with products and systems for their improvement. This book will be of special value to a large variety of professionals, researchers and students in the broad field of human modeling and performance who are interested in feedback of devices' interfaces (visual and haptic), user-centered design, and design for special populations, particularly the elderly. We hope this book is informative, but even more - that it is thought provoking. We hope it inspires, leading the reader to contemplate other questions, applications, and potential solutions in creating good designs for all.

Advanced Fibrous Composite Materials for Ballistic Protection Xiaogang Chen, 2016-01-21 Advanced Fibrous Composite Materials for Ballistic Protection provides the latest information on ballistic protection, a topic that remains an important issue in modern times due to ever increasing threats coming from regional conflicts, terrorism, and anti-social behavior. The basic requirements for ballistic protection equipment are first and foremost, the prevention of a projectile from perforating, the reduction of blunt trauma to the human body caused by ballistic impact, the necessity that they are thermal and provide moisture comfort, and that they are lightweight and flexible to guarantee wearer's mobility. The main aim of this book is to present some of the most recent developments in the design and engineering of woven fabrics and their use as layering materials to form composite structures for ballistic personal protection. Chapter topics include High Performance Ballistic Fibres, Ultra-High Molecular Weight Polyethylene (UHMWPE), Ballistic Damage of Hybrid Composite Materials, Analysis of Ballistic Fabrics and Layered Composite Materials, and Multi-Scale Modeling of Polymeric Composite Materials for Ballistic Protection. Contributions from leading experts in the field Cutting edge developments on the engineering of ballistic materials Comprehensive analysis of the development and uses of advanced fibrous composite materials
