Handbook of Avian Hybrids of the World Eugene M.

McCarthy,2006-02-16 With more than 5,000 works cited, Handbook of Avian Hybrids of the World is the greatest compendium of information ever published on hybridization in birds. Worldwide in scope, it provides information on all reported avian crosses, not only those occurring in captivity, but also in a natural setting (approximately 4,000 crosses are covered). This book is a basic reference, intended both for the serious birder and the professional biologist. McCarthy's work fills a need for reference material that takes into account the last half century of data. It will be of interest to workers in a wide variety of fields, ranging from animal behavior to genetics, ecology, zoology, and systematics. In fact, it will make fascinating reading for anyone interested in birds and the natural world.

The Birds of Africa: Volume I, 2020-06-25 Universally recognised as by far the most authoritative work ever published on the subject, *The Birds of Africa* is a superb multi-contributor reference work, with encyclopaedic species texts, stunning paintings of all species and numerous subspecies, hundreds of informative line drawings, detailed range maps, and extensive bibliographies. Each volume contains an Introduction that brings the reader up to date with the latest developments in African ornithology, including the evolution and biogeography of African birds. Diagnoses of the families and genera, often with superspecies maps, are followed by the comprehensive species accounts themselves. These include descriptions of range and status, field characters, voice, general habits, food, and breeding habits. Full bibliographies, acoustic references, and indexes complete this scholarly work of reference. This first volume in the series deals comprehensively with Ostrich, albatrosses, petrels and shearwaters,

storm-petrels, penguins, divers, grebes, tropicbirds, boobies, cormorants, darter, pelicans, frigatebirds, herons, Hamerkop, storks, Shoebill, ibises and spoonbills, flamingos, swans, geese and ducks, and diurnal birds of prey. The editors and artists have worked closely with other authors - all acknowledged experts in their field - to produce a superb reference in which comprehensive texts on every species are complemented by accurate and detailed paintings and drawings of the birds themselves.

Pelicans, Cormorants, and their Relatives J. Bryan

Nelson, 2006-01-26 The pelecaniformes are a large and important group of seabirds, containing many spectacular species. This book addresses the breeding biology of the six pelecaniform families, which comprise the closely-related core groups (pelicans, cormorants/shags, darters, gannets/boobies) and their more distant relatives, the frigate birds and tropic birds. Many fundamental questions can be addressed through the pelecaniformes: Why do they breed in colonies? What are the links between their feeding methods and their reproduction? What part does territorial and pairing behaviour play in their life-cycles? These and scores of comparable issues, including those related

to man, are woven here into a richly interpretative text. The author's approach to the subject is threefold. First, the pelecaniformes are placed within the framework of four discrete disciplines, with chapters on evolutionary relationships, comparative behaviour, ecology, and the birds' relationship with humans. Secondly, each of the six families is discussed, elucidating the range of taxonomy, behaviour, and ecology within each. Finally, we progress to specific level, using the same structure as for the family accounts. In this way, each of the 60-odd species can be understood not just as discrete units, but as part of their family and order. The book is unique in its coverage of the entire order and in its combination of facts and interpretation. Pelicans, Cormorants, and their Allies will enable readers not only to identify the many spectacular species which make up this large and important group of seabirds, but also to understand their breeding biology.

Handlist of the Birds of Egypt Michael John Nicoll, 1919

The Birds of Ancient Egypt Patrick F. Houlihan, 2023-09-30

Hailed as a sumptuously produced and finely illustrated outstanding contribution to ancient Egyptian studies, this facsimile reprint of Patrick Houlihan's 1986 comprehensive study makes a welcome return in the Oxbow Classics in Egyptology series. Animals of all kinds are amply illustrated in Egyptian art, none more so than birds, in both secular and religious contexts and in hieroglyphic scripts. A great variety of bird species has for millennia made twice yearly migrations passing over Egypt, which is also an important overwintering area for many. These migrant birds, together with indigenous species were an abundant and easily exploited source of food for ancient Egyptians, for domestication and status display. Tomb scenes displaying birds provided as food for the deceased are abundant,

as are procession scenes of offering with bearers bringing gifts of fowl. Many birds also had religious associations. Houlihan provides a systematic and unparalleled survey of all the bird life depicted by the ancient Egyptians in art and hieroglyphic writing, some 72 species (plus bats), with a list of known mummified species, and discussions on their religious and secular associations and many illustrations. Their present-day distributions are compared with that known from the time of the Pharaohs. A checklist of the birds of modern Egypt is provided by Steven Goodman.
