Cultural and Literary Representations of the Automobile in French Indochina

Stéphanie Ponsavady, 2018-08-21 How are the pleasures and thrills of the automobile linked to France's history of conquest, colonialism, and exploitation in Southeast Asia? *Cultural and Literary Representations of the Automobile in French Indochina* addresses the contradictions of the "progress" of French colonialism and their consequences through the lens of the automobile. Stéphanie Ponsavady examines the development of transportation systems in French Indochina at the turn of the twentieth century, analyzing archival material and French and Vietnamese literature to critically assess French colonialism.

Zero Carbon Car Brian Long, 2013-03-01 The Zero Carbon Car examines the hundreds of ways in which car manufacturers are trying to reduce our carbon footprint, and the adaptation of the automotive industry to changing technology in a world where environmental issues are becoming ever more prevalent. The book's in-depth research into green car technology shows that manufacturers make concerted efforts, but sometimes also defeat the gains of their innovation. Topics covered include: What is meant by the terms 'global warming' and 'green', and how these can be defined; An account of the long history of green automotive technology; Alternative fuels, including diesel and hydrogen; Developments in environmentally friendly engine technology; Electric cars; Environmental issues in material usage and car body manufacture. A wide-ranging survey of the hundreds of ways in which car manufacturers are trying to reduce our carbon footprint. Written in an easy-to-understand manner, the book enables the reader to fully understand what is meant by 'global warming'. Examines alternative fuels, material usage and the motive power options available to us. Superbly illustrated with 350 colour

photographs. Brian Long is a professional writer and motoring historian with over sixty books to his credit.

Alternative Propulsion for Automobiles Cornel Stan, 2016-08-05 The book presents – based on the most recent research and development results worldwide - the perspectives of new propulsion concepts such as electric cars with batteries and fuel cells, and furthermore plug in hybrids with conventional and alternative fuels. The propulsion concepts are evaluated based on specific power, torque characteristic, acceleration behaviour, specific fuel consumption and pollutant emissions. The alternative fuels are discussed in terms of availability, production, technical complexity of the storage on board, costs, safety and infrastructure. The book presents summarized data about vehicles with electric and hybrid propulsion. The propulsion of future cars will be marked by diversity – from compact electric city cars and range extender vehicles for suburban and rural areas up to hybrid or plug in SUV s, Pick up s and luxury class automobiles.

Electric Vehicle Systems Architecture and Standardization Needs Beate Müller, Gereon Meyer, 2015-02-25 This edited volume presents research results of the PPP European Green Vehicle Initiative (EGVI), focusing on Electric Vehicle Systems Architecture and Standardization Needs. The objectives of energy efficiency and zero emissions in road transportation imply a paradigm shift in the concept of the automobile regarding design, materials, and propulsion technology. A redesign of the electric and electronic architecture

provides in many aspects additional potential for reaching these goals. At the same time, standardization within a broad range of features, components and systems is a key enabling factor for a successful market entry of the electric vehicle (EV). It would lower production cost, increase interoperability and compatibilities, and sustain market penetration. Hence, novel architectures and testing concepts and standardization approaches for the EV have been the topic of an expert workshop of the European Green Vehicles Initiative PPP. This book contains the contributions of current European research projects on EV architecture and an expert view on the status of EV standardization. The target audience primarily comprises researchers and experts in the field.

Vehicle Propulsion Systems Lino Guzzella, Antonio Sciarretta, 2012-12-25 This text provides an introduction to the mathematical modeling and subsequent optimization of vehicle propulsion systems and their supervisory control algorithms. Automobiles are responsible for a substantial part of the world's consumption of primary energy, mostly fossil liquid hydrocarbons and the reduction of the fuel consumption of these vehicles has become a top priority. Increasing concerns over fossil fuel consumption and the associated environmental impacts have motivated many groups in industry and academia to propose new propulsion systems and to explore new optimization methodologies. This third edition has been prepared to include many of these developments. In the third edition, exercises are included at the end of each chapter and

the solutions are available on the web.

The Greening of the Automotive Industry G. Calabrese, 2016-04-12 An examination of the greening of the automotive industry by the path dependence of countries and carmakers' trajectories. Three sources of path dependency can be detected: business models, consumer attitudes, and policy regulations. The automobile is changing and the race towards alternative driving systems has started!

The Automotive Industry and European Integration A. J. Jacobs, 2019-08-07 This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

Digital Reality Melanie Chan, 2020-09-17 As contemporary scholars, journalists, and commentators have indicated, mobile digital devices promote a constant shift of attention between the world around us and the stimulations afforded by screen-based interfaces. Investigating these

uniquely contemporary hybrid interactions, Melanie Chan posits that while digital technologies are part of a long and historic trajectory, they nonetheless may instigate new forms of corporeal practices and experiences. How might continuous engagement with mobile devices and associated software impact our perception of sensory embodied experience? Drawing upon existing scholarship around mobile media and new media, *Digital Reality* explores digital technologies as phenomena (observable items such as smart-phones, handsets, consoles, head-mounted displays and goggles) in the light of theories of reality and corporeality. In so doing, the book highlights the qualitative dimensions of our sense of aliveness, movement, and interaction within a range of environments (virtual, real, or hybrid). Ultimately, the book illuminates how our sense of shared, objective reality changes due to hybrid forms of reality.

History of Electric Cars Nigel Burton, 2013-06-30 One hundred years ago electric cars were the most popular automobiles in the world. In the late nineteenth century and at the start of the twentieth century, they outsold every other type of car. And yet, within a couple of decades of the start of the twentieth century, the electric car had vanished. Thousands of battery-

powered cars disappeared from the streets, replaced by the internal combustion engine, and their place in the history of the automobile was quietly erased. A century later, electric cars are making a comeback. Fears over pollution and global warming have forced manufacturers to reconsider the electric concept. A History of Electric Cars presents for the first time the full story of electric cars and their hybrid cousins. It examines how and why electric cars failed the first time - and why today's car manufacturers must learn the lessons of the past if they are to avoid repeating previous mistakes all over again. The book examines in detail: Early vehicles such as the Lohner-Porsche petrol-electric hybrid of 1901; Key figures in the history of the electric car development such as Henry Ford; Sir Clive Sinclair's plans to build a number of electric vehicles, designed to sit alongside the Sinclair C5; The return of the electric technology to vehicles as diverse as the NASA Lunar Rover, commuting vehicles and supercars; Future developments in electric cars. For the first time the full story of electric cars and their hybrids are examined. The hidden past of the electric automobile is uncovered and its future developments are discussed. Superbly illustrated with 300 colour photographs, many of which are rare and original sketch designs. Nigel Burton has written and lectured on cars and automotive history for more than twenty years.

2020 Year of Plenty Dr Afiniki Akanet, 2021-01-07 In her usual conversational style, Dr. Akanet, through her perspective as a GP (family doctor) and mother to two young children, shares her ups and downs of 2020, while trying to move house. Moving home, particularly when it involves buying or selling a house, has been noted to be one of the three most stressful life events, and doing so during a pandemic would make it even more challenging. 2020 brought with it challenges and changes most of us never expected, taking

some of us to almost breaking point. This book will take you through one family's journey, to discover how they survived such a tough year, and reflect on whether there could really be blessings to count for 2020. Based on true events, with stories about parenting, faith, marriage, patients, estate agents and immigrant perspectives, this book will bring you smiles, tears, inspiration and hope for the days ahead. Book Reviews: "A record of the real-life experiences of one medical family as the novel Coronavirus, emanating from Wuhan in China, slowly embraced the whole world. It is often amusing and sometimes poignant in its detail of her days in the 'new normal' and very surreal world into which we were all suddenly plunged!" - Paul Sheffield "I expected a book about 2020 to be all doom and gloom, but was surprised to find myself laughing out loud at times. - Dr. Anna Nguyen (GP) "Afiniki is not only a talented mother and professional, but an eternal feel-good optimist. If anyone is going to see the good in 2020, it is going to be Afiniki." - Trish Adudu (BBC presenter) "This book is a very interesting read, and one which I am sure will be of great interest to school students in a couple of generations time" - Margaret Greenway "There's no doubt that 2020 will live in all of our memories as a year like no other! But what have we learned through it? And what can we take away, moving forward? Have a read of one reflection of not only what was lost this year, but also what was gained." - Diane Rickard

Operating Electric Vehicle Dr. Mahesh Kumar K M, Dr. Nellore Manoj Kumar, Er. Hemavathi S, Dr. Ashish Verma, 2022-10-01 Electric vehicles (EVs) are a novel idea in the automobile sector. While some manufacturers have built their whole lineup of electric automobiles to be environmentally friendly, others provide hybrids that can run on either electricity or gasoline. The Ford Focus Electric, Nissan Leaf, Tesla Model S, and Chevrolet Volt are just a few examples of electric vehicles that may help you save money and reduce your impact on the environment. Pollution and greenhouse gases are threats that we face because of the large amounts of carbon emissions released into the environment by automobiles. One of the best things we can do for the world we

live in is to buy an electric automobile. There are financial incentives for becoming green, and one of them is purchasing an electric vehicle. The potential increase in the car's price is outweighed by the benefits. When weighing the pros and drawbacks of buying an EV, there are still factors to think about. Electric vehicles are powered by onboard rechargeable batteries. Not only do these batteries keep the automobile running, but they also keep the lights and wipers operational. The battery capacity of electric vehicles is typically higher than that of conventional gasoline vehicles. Batteries of this kind are commonly used to kickstart a gasoline motor. The only real difference is that electric cars utilize a greater quantity of them to power the motor.

The Motor Car Giancarlo Genta, Lorenzo Morello, Francesco Cavallino, Luigi Filtri, 2014-01-06 This book is an introduction to automotive engineering, to give freshmen ideas about this technology. The text is subdivided in parts that cover all facets of the automobile, including legal and economic aspects related to industry and products, product configuration and fabrication processes, historic evolution and future developments. The first part describes how motor vehicles were invented and evolved into the present

product in more than 100 years of development. The purpose is not only to supply an historical perspective, but also to introduce and discuss the many solutions that were applied (and could be applied again) to solve the same basic problems of vehicle engineering. This part also briefly describes the evolution of automotive technologies and market, including production and development processes. The second part deals with the description and function analysis of all car subsystems, such as: · vehicle body, · chassis, including wheels, suspensions, brakes and steering mechanisms, · diesel and gasoline engines, · electric motors, batteries, fuel cells, hybrid propulsion systems, · driveline, including manual and automatic gearboxes. This part addresses also many non-technical issues that influence vehicle design and production, such as social and economic impact of vehicles, market, regulations, particularly on pollution and safety. In spite of the difficulty in forecasting the paths that will be taken by automotive technology, the third part tries to open a window on the future. It is not meant to make predictions that are likely to be wrong, but to discuss the trends of automotive research and innovation and to see the possible paths that may be taken to solve the many problems that are at present open or we can expect for the future. The book is completed by two appendices about the contribution of computers in designing cars, particularly the car body and outlining fundamentals of vehicle mechanics, including aerodynamics, longitudinal (acceleration and braking) and transversal (path control)

motion.
