Philip's Planisphere - Southern Hemisphere (Latitude 35 South) ,2012-04-02 Invaluable for both beginners and advanced observers, Philip's Planisphere (Latitude 35 South) is an essential travel accessory for astronomy enthusiasts visiting Australia, New Zealand, South Africa or southern South America. To use this practical hour-by-hour tracker of the stars and constellations, you simply turn the oval panel to the required date and time to reveal the whole sky visible from your location. The map, by the well-known celestial cartographer Wil Tirion, shows stars down to magnitude 4, plus several deep-sky objects, such as the Pleiades, the Large and Small Magellanic Clouds (LMC and SMC), and the Orion Nebula (M42). Because the planets move round the Sun, their positions in the sky are constantly changing and they cannot be marked permanently on the map; however, the back of the planisphere has tables giving the positions of Venus, Mars, Jupiter and Saturn for every month until 2020. The planisphere is supplied in a full-colour wallet that contains illustrated step-by-step instructions for how to use the planisphere, how to locate planets, and how to work out the time of sunrise or sunset for any day of the year. It explains all the details that can be seen on the map - the magnitudes of stars, the ecliptic and the celestial coordinates. In addition, the section 'Exploring the skies, season by season' introduces the novice astronomer to the principal celestial objects visible at different times of the year. Major constellations are used as signposts to navigate the night sky, locating hard-to-find stars and some fascinating deep-sky objects. The movement of the stars is also explained.

Philip's Planisphere (Latitude 51.5 North) ,2012-01-06 Invaluable for both beginners and advanced observers, Philip's Planisphere (Latitude 51.5 North) is a practical hour-by-hour tracker of the stars and constellations, designed for use anywhere in Britain and Ireland, Northern Europe, Northern USA and Canada. Turn the oval panel to the required date and time to reveal the whole sky visible from your location. The map, by the well-known celestial cartographer Wil Tirion, shows stars down to magnitude 5, plus several deep-sky objects, such as the Pleiades, the Andromeda Galaxy (M31) and the Orion Nebula (M42). Because the planets move round the Sun, their positions in the sky are constantly changing and they cannot be marked permanently on the map; however, the back of the planisphere has tables giving the positions of Venus, Mars, Jupiter and Saturn for every month until 2020. The planisphere is supplied in a full-colour wallet that contains illustrated step-by-step instructions for how to use the planisphere, how to locate planets, and how to work out the time of sunrise or sunset for any day of the year. **Planisphere** John Ashbery, 2010-12-07 Breathlike Just as the day could use another hour, I need another idea. Not a concept or a slogan. Something more like a rut made thousands of years ago by one of the first wheels as it rolled along. It never came back to see what it had done, and the rut just stayed there, not thinking of itself or calling attention to itself in any way. Sun baked it. Water stood, or rather sat in it. Wind covered it with dust, then blew it away. Always it was available to itself when it wished to be, which wasn't often. Then there was a cup and ball theory I told you about. A lot of people had left the coast. Squirt conditions obtained. I forgot I overwhelmed you once upon a time, between everybody's sound sleep and waking afterward, trying to piece together what had happened. The rut glimmered through centuries of snow and after. I suppose it was trying to make some point but we never found out about that, having come to know each other years later when our interest in zoning had revived again.

*Philip's Planisphere 35 Degrees S with Specially Commissioned Star Map by Will Tirion*, 2004-04-10 An essential item of equipment for beginners and experienced observers, Philip's Planisphere enables the user to locate stars, constellations and planets, and work out sunrise and sunset times for every day of the year. Simply turn the oval panel to the required date and time to reveal the whole sky visible from your location. This brand new edition of the Philip's Southern Planisphere is larger, clearer and easier to use, while remaining lightweight and portable. The new map, drawn by renowned celestial cartographer Wil Tirion, shows stars down to magnitude 4 (stars visible with the naked eye), as well as many deep-sky objects. On the back of the planisphere are tables giving the positions of the four visible planets - Venus, Mars, Jupiter and Saturn - for every month until 2012. The Southern 35 Planisphere is suitable for use in Australia, New Zealand, southern Africa and Southern America. The WALLET New for this edition is the full-colour wallet. Divided into two main sections - 'Using the planisphere' and 'Exploring the skies' - it provides indispensable information for the first time observer. 'Using the planisphere' gives illustrated step-by-step instructions on how to set the planisphere to the right date and time, how to locate the planets and how to work out the time of sunrise or sunset. It explains the details seen on the map, such as the magnitudes of stars, the ecliptic (path of the Sun) and the celestial coordinates. 'Exploring the skies' is an excellent beginner's guide to stargazing. It introduces the novice astronomer to the principal celestial objects visible at different times of the year. Major constellations are used as signposts to navigate the night sky, locating hard-to-find stars and some fascinating deep-sky objects. Main map scale:

**Egypt -- 'Image of Heaven'** Willem H. Zitzman,2006 The ancient Egyptians were the first geographical planners to develop a system establishing an image of heaven on earth. This book completes ten years of research into how the Pyramid Field depicts The Constellation of Horus, the deity who bore the meaning of power and invincibility and who guarded the Pharaoh. Rather than randomly pick certain pyramids, Zitzman is the first scholar able to make sense of the entire era of pyramid building. Is this depiction of Heaven on Earth an inheritance of the mythical Followers of Horus, who were said to rule Egyptian in Predynastic times? Zitzman reveals how time and space were perceived by the Egyptians as sacred ingredients, and that they mixed into a divine master plan, which for the first time is unveiled in its entirety. The precision (of the Egyptians) was amazing by any standards, and there is no doubt that the Pyramids were astronomically designed. -- Patrick Moore.

**Firefly Planisphere: Latitude 42 Degrees North** Not Available (NA),2010-08 Key on the back describes star magnitudes for finding stars from magnitude 0-1 (large) to 5 (small). Planetary tables provide at-a-glance coordinates for locating the brightest planets in the sky from 2010 until 2020 Venus, Mars, Jupiter and Saturn.

**Planisphere and Starfinder** DK,2019-08-01 Planisphere and Starfinder is a practical guide to finding your way around the night sky. It demystifies astronomy and introduces basic stargazing techniques, enabling you to find and recognize objects with ease. A section on the Solar System shows you how to observe the Moon, planets, and other bodies such as comets and asteroids. It also gives advice on looking at eclipses and meteor showers. The central section of the book is a detailed guide to the constellations. Each entry in the guide is illustrated with a clear star chart, supported by graphics that show where in the world the constellation can be seen and explain the symbolic meaning of its star pattern. The key features for observation are presented in an accessible list supported by advice on how best to observe them. The final section is a month-by-month guide to the night sky. A double-page spread for each month highlights the features on view, while a large-scale chart shows you where to find the planets and a table of special events lists the dates of Moon phases, eclipses, and the best times to see the planets.

*Planisphere for Latitude 42 North* George Philip's Ltd,2001-05-01 Look to the stars--and find them, at any evening hour, any season of the year! And don't forget the planets, too. You'll feel as if you have a personalized tour guide to outer space (as seen in the northern latitudes) when you set the date and time on this movable disk. Hold the planisphere directly overhead and with the midnight mark pointing north. All the constellations on the map will then come into focus for you. Just begin by locating one, and move along the sky, helped by the lines joining the stars on the chart. Finding the planets takes a little more work, because they all revolve at different rates and can't be plotted permanently; but the tables will show you how to figure out the position of the brightest (Venus, Mars, Jupiter, and Saturn). Bonus: you can calculate sunrise and sunset for any particular day!

The Top Books of the Year Planisphere The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous captivating novels captivating the hearts of readers worldwide. Let's delve into the realm of bestselling books, exploring the fascinating narratives that have enthralled audiences this year. Planisphere : Colleen Hoover's "It Ends with Us" This heartfelt tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can prevail. Planisphere : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This captivating historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Planisphere : Delia Owens' "Where the Crawdads Sing" This mesmerizing coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens crafts a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who

is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and suspenseful novel that will keep you guessing until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
