Offshore Oil Platform & Support Vessels, Foreign James Laurence Pelletier,1996

A Holistic Approach to Ship Design Apostolos Papanikolaou,2018-12-11 This book introduces a holistic approach to ship design and its optimisation for life-cycle operation. It deals with the scientific background of the adopted approach and the associated synthesis model, which follows modern computer aided engineering (CAE) procedures. It integrates techno-economic databases, calculation and multi-objective optimisation modules and s/w tools with a well-established Computer-Aided Design (CAD) platform, along with a Virtual Vessel Framework (VVF), which will allow virtual testing before the building phase of a new vessel. The resulting graphic user interface (GUI) and information exchange systems enable the exploration of the huge design space to a much larger extent and in less time than is currently possible, thus leading to new insights and promising new design alternatives. The book not only covers the various stages of the design of the main ship system, but also addresses relevant major onboard systems/components in terms of life-cycle performance to offer readers a better understanding of suitable outfitting details, which is a key aspect when it comes the outfitting-intensive products of international shipyards. The book disseminates results of the EU funded Horizon 2020 project HOLISHIP.

Target Ship Identification Algorithm Based on Comprehensive Correlation Discriminant and Information Entropy Zhaoguo Shu, Ship type identification is an important part of electronic reconnaissance. However, in the existing methods, such as statistical-based methods and fuzzy-mathematics-based methods, the information acquired by the passive sensor is not fully utilized, and there is a certain ambiguity in the assignment relationship of the emitters-ship.

Marine Structural Design Yong Bai,2003-08-05 This new reference describes the applications of modern structural engineering to marine structures. It will provide an invaluable resource to practicing marine and offshore engineers working in oil and gas as well as those studying marine structural design. The coverage of fatigue and fracture criteria forms a basis for limit-state design and re-assessment of existing structures and assists with determining material and inspection requirements. Describing applications of risk assessment to marine and offshore industries, this is a practical and useful book to help engineers conduct structural design. *Presents modern structural design principles helping the engineer understand how to conduct structural design by analysis *Offers practical and usable theory for industrial applications of structural reliability theory

Remote Sensing in Vessel Detection and Navigation Henning Heiselberg,Andrzej Stateczny,2020-12-11 The Special Issue entitled "Remote Sensing in Vessel Detection and Navigation" comprises 15 articles on many topics related to remote sensing with navigational sensors. The sequence of articles included in this Special Issue is in line with the latest scientific trends. The latest developments in science, including artificial intelligence, were used. It can be said that navigation and vessel detection remain important and hot topics, and a lot of work will continue to be done worldwide. New techniques and methods for analyzing and extracting information from navigational sensors and data have been proposed and verified. Some of these will spark further research, and some are already mature and can be considered for industrial implementation and development.

Ship Collision and Capacity of Brace Members of Fixed Steel Offshore Platforms Health And Safety Executive Staff,Willem Visser,Great Britain. Health and Safety Executive,Visser Consultancy,2004-05 Supply boat collision is one of the most critical accidents

that can affect structural safety and integrity of fixed installations. Pim Visser, an experienced engineer has disentangled much of the research complexity and provided a practical and accessible resource for assessing impact resistance. The capacity of members damaged due to vessel impact has been researched extensively because of the significant safety implications. However different approaches have been taken and, whilst many of the findings are in the public domain, it has not been an easy task for designers or assessment engineers to locate the information or apply it consistently.

The Life of a Ship R. M. Ballantyne,2013-05-08 Davy was a fisher boy; and Davy was a very active little boy; and Davy wanted to go to sea. His father was a fisherman, his grandfather had been a fisherman, and his great-grandfather had been a fisherman: so we need not wonder much that little Davy took to the salt water like a fish. When he was very little he used to wade in it, and catch crabs in it, and gather shells on the shore, or build castles on the sands. Sometimes, too, he fell into the water neck and heels, and ran home to his mother, who used to whip him and set him to dry before the fire; but, as he grew older, he went with his father in the boat to fish, and from that time forward he began to wish to go to sea in one of the large ships that were constantly sailing away from the harbour near his father's cottage.

Condition Red Area 51 DeWayne Harper,2013-11-27 July 9, 1947. Roswell, New Mexico. A young boy tags along with his father to the Roswell Army Air Field and witnesses something he was not to see or know about until fifty-three years later. August 5, 2000. Garden Plains, Kansas. A massive alien craft is spotted hovering by local citizens and darts off to the Northwest somewhere in Colorado, where it starts to tailgate commercial Flight 311 on its way to Oklahoma City. Three F-15 aircrafts are scrambling to intercept and investigate this unknown intruder. The alien craft darts off to the Southeast, and the three F-15s give pursuit of the unknown intruder. The alien craft is able to lose the F-15s in a thunderstorm near Roswell, and history repeats itself some fifty-three years later.
